## The Firft Propofition, by way of Preface.

> That the ftrangenefs of this Opision is no Sufficient reafon why it fould be rejes cted,becaufe otber certain Truths have been formerly efteemed ridiculous, and great Abfurdities entertained by Common Consent.

THere is an Earneftnefs and hungering after Novelty, whichdoth ftill adhere unto all our Nacures, and it is part of that Primitive Image, Thhat wide Extent and infifite Capacity at firt Createdin the Heart of Man. For this,
fince itsdepravation in Adam, perceiving ir felf altogether Empried of any good, doth now catch after every new Thing, conceiving that poffibly it may find Satisfaction among fome of its fellow Creatures. But our Enemy the Devil (who frives fill to pervert our gifts, and beat us with our own Weapons ) hath fo contriv'd it, that any Truth doth now feem Diftafful for that very Reafon, for which Errour is entertain'd: Novelty. For let bnt yome upflart Herefie be fet abroach, and prefently there are fome out of a curious Humour; ochers, as if they watched an occafion of fingularity, will take it up for Canonical, and make it part of their Creed and Profeflion; whereas Solitary Truth cannot any-where find fo ready Enterrainment; but the fame Novelty which is efteemed the Commendation of Errour, and makes that acceptable, is counted the fault of Truth, and caufes that to be Rejected:
How did the Incredulous World gaze at Columbus; when he promifed to difcover another part of the Earth, and he could not for a long time, by his Confidence, or Arguments, Induce any of the Chrifitian Princes, either to affient unto his Opinion, or go to the charges of an Experiment? Now if he, who had fuch good grounds for his Affertion, could find no better Entertainment among the Wifer fort, and upper end of the World ; ' tis not likely then that this Opinion which I now deliyer, fhall

Thatit the Moon mav be a World.
receive: ny thing from the Men of there Days, efpecially our: Vulgar Wits, but Mitbeleif or Diriquon.
It hath always been the unhappine ifs of new Truths in Philofophy, ta be: defided by thofe that are Ignorant of the cautes of tbings, and rejected by others, whore perverffers ties them to the contrary Opinion, Men whore Envious pride will not allow any new thing for Truth, which thoy themfelves were not the firft Inventors of. : So that I may juftly expect to beaccured of a Pragmatical Ignorance, and bold Oftentation; efpecially fince for this Opinion, Xenopbanes, a Man whofe Authority was able to add fome Credit to his affertion, could not efcape the like Cenfure from others. For Natales Comes §peaking of that Philofopher, and this his Opinion, faith thus, Nonnulli me nibil fiife wideantur, alj- Mythoiog. qua soiva monffra in Pbilofopijiamintroducunt, lib.3.c.r\%: ${ }^{2}$ ut alicrujus rei inventores fuile appareant. " Some there are, who left they might feem "to know nothing, will bring up mon"ftrous abfuiditites in Philofophy, that fo "afferward they may be famed for the In"vention of fomewhat. The fame Authordoth alfo in another place accure $A$. naxagcitas of Folly for the fame Opinion. Effeimim non ignobilis giadus stulititie, vel $\bar{f}$ Lib. g.c.i. refcias quid dicas, tameen welle de evebus propoftis banc vell illam partem ffabilize. "Tis ". none of the worft kindṣof Folly, boldly

B $\boldsymbol{x} \ldots$ ".

## That the Moon may be a World.

" to affirm one fide or other when a Mah " knows not what to fay.

If thefe Men were thus cenfurd, 1 may juftly then expect to be derided by moft, and to be beleived by few or none; efpeally fince this Opinion feems to carry in it fo much ftrangenefs, and Contradiction to the general confent of others. But however, Iam refolved that this fhall nor bear ny difcouragement, fince I know that is is not Common Opinion that can either add or derract from the Truth. For,

1. Other Truths have been formerly efteemed altogether as rediculous as this can be.
2. Grofsabfurdities have been Enrertained by general Opinion.

1 hall give an infance of each, that to I may the better prepare the Reader to confider things Without a prejudice, when he fhall fee that the Common Oppofition againft this which I affirm, cannot:any way derogate from its Truth.
r. Ottier Truchs have been formerly accounted as ridiculous as this. I hall feecifie that of the Antipodes, which have beer denied; and laught at by many wife Men and great Sctiolars, fich as were Herodo: tus, Cbryfoftom, Auffin, Lactantius, the Venerable Bede, Lucretiss the Poet, Procopius, and the Voluminous Abulenfis, together with all thofe Fathers or other Authors who deni-

That the Moos may be a World. conld not forbear laughing to think of it:

 "(Gaith he) to fee fo many Men Venture "to dẹcribe the Earths compafs, relating "thofe things that are without all Senfe, "as that the Sea flows about the World, " .2 that the Earthit felf is round as an Orb. But this great Ignorance is not fo much to be admired in him, as in thofe Learneder Men of later times, when all Sciences began to Flourifh in the World. Such were St. Cbryfoforme, who in his I4 Homily upon the Epiftle to the Hebreys, does make a chalenge to any Man that fhall dare to defend that the Heavens are Round, and not rather as a Tent. Thus likewifeSt.Auffive, De civit: who Cenfures that Relation of the Anti- Dtilibi.16. podes to be an incredible Fable; and with cap. 9. him agrees the Eloquent Lactantius, Quid inli qui efe contrarios veftigiis nofris Antipedes Inftitut. putant? num aliquid loguuntur? aut eft quifpicic. 24. am tam ineptus qui credet efe bomines, gworum vefigigia funt fuperiora quam capita ? aut ibi gue apud wos jacent inverfa pendere? fruges Wa arberes deorfum verfuc crefere, pluvias ${ }_{2}$ nives, of grandizem furfum veffus cadere in terram? \& miratur aliquis bortos peryfles inter Septems mira narrari, quum Pbiilofphi, \& a-
 faciunt, ©r. ." What (faith he) arethey that think there are Agtipodes, fu is ed the roundnefs of the Heavens.' Herodonus counted is of horrible an abfurdity, that be could

## That the Moon mayy bet Wortal

Tim.2.4

## That the Moen may be a World.

Mat. 28.16 and therefore he thinks, that as there are no Men, fo neither are there Seas, or Rivers, or any nther conveniency for Habitation. Aventinus 'lis commonly related of one $V_{\text {irgiliws, }}$ And orum.lb.3, that he was Excommunicated and Condemned for a Heretick by Zacbary Bifhop of Rame, becaufe he was not of the fame
Amnal Ec-Opinion. But Baronius fays, it was beclef. A.D. caufe he thought there was another Habi748:: table World within ours. However, you may well enough difcern in thefe examples, how confident many of thefe great Scholars were in fo grofs an Errour, how unlikely, what an Incredible thing it feemed to them, that there fhould be any Antipodes; and yer now this Truth is as certai. and plain, as Senfe or Demonftration can make it. This then which I now deliver, is not to be rejected, though it may feem to contraditt the common Opinion.
2. Grofs abfurdities have been entertained by general confent. I might infance in many remarkable examples," but 1 will only (peak of the fuppofed Labour of the Moon in her Eclipfes, becaufe this is neareft to the cheif matter in Hand, and was received as a coramon Opinion amonglt many of the Ancients, Infomuch that from hence they ftiled Eclipfes by the name of aidn Paflons, or in the phrafe of the Poets,

That the Moon may be a World.

## Solis lunag; lahores.

And therefore Plutarch fpeaking of a Lunary Eclipfe, relates, that at fuch times twasa cuftom amongt the Romams (the most Civiland Learned People in the World) to Sound Brafs Inftruments, and hold grea its,

 àvsév they fuppofed the Moon was much eafed in her Labours ; and therefore Ovid calls fuch loud Inftruments the Auxiliaries or helps of the Moon,

Metions.
lib. 4.
Cum fruftra refonaut ara auxiliavia Lume.
And therefore the Satyrift too, defribing a loudScold, fays, She was able to make noife enough to deliver the labouring Moon.

## Una laboranti poterit fuccurrere Luna.

fuvek: Sat. 6.
Now the reafon of all this their Cerimony, was, becaufe they feared the World would fall afleep, when one of its eyes began to winck, and therefore they would do what they could by loud Sounds to roufe it from its drowfinefs, and keep it awake, by bright torches, to beftow that light upon it which it began to lofe.

## That the Moon may be a World

Some of them thought hereby to keep the Moen in her Orb, whereas otherwife The would have fallen down upon the Earth, and the World would have loft one of its Lights; for the credulous People beleived, that Inchanters and :Witches could bring the Moon down, which made Virgil fay,

> Cartus é í calo pofunt deducere Lunam.

And thofe Wizards knowing the times of her Eclipfes. wonld thenthreaten to fhew their skill, by pulling her out of her. Orb. So that when the filly multitude faw that fhe beganto look red, they prefently feared they fhould lofe the benefit of hor Light, and therefore made a great noife that the might not hear the found of thofe Charms, which would otherwife bring her down; and this is rendred fori a reafon of this culftom by Pliny and Propertias:

## Nat. 'Hijf.

Lib.2c.12: Cantus do fi curru lunam deducere tentant, Et facerent, fi non era repulfa: fonent.,

Plutarch gives another reafon ofit, and he fays, 'tis becaufe they would haften the Moon out of the dark .fhade wherefin the was involv'd, that fo the might bring away the Souls of thofe Saines that inhabitwithin her, which cry out by reafonthey are then deprived of their wonted Happinefs, and cannot hear the Mofick of the Sphears, but

## Ihat the Moon may be a World.

but are forced to behold the torments and wailing of thofe Damned Souls which are reprefented to them as they are Tortured in the Region of the Air. But whether this or what ever elfe was the meaning of this Supertition, yet certainly 'twas a very ridiculous cultom, and bewrayed a great ignorance of thole ancient times; cfpecially fince it $\cdot$ was not only yeceived by the vilh. gar, fuch as were Men of lefs Note and Learning, but beleived alfo by the more Famous and Wifer fort, fach as were thofe great Poets, Steficboris and Pindar. And not only amongf the more fottifh Heathens, who might account that Plannet to be one of their Gods; but the Primitive Cluriftians alfo were in this kind guilty, , which made Saint Ambrofe fo tartly to rebuke thofe of of his time, when he faid, Tum turbatur carminibus Globus Lune, quando calicibus turbantur' \& oculi. "When your Head's are "troubled with Cups, then you think the "Moon to be troubled with Charms.

And for this reafon alfo did Maximus a Bifhop; write a Homily againft it, wherein he fhewed the abfurdity of that Foolifh Epifc. Supperitition. I remember that Liddovicus Vives relates a more ridiculous ftory of a People that impriforied an Afs for drincking up the Moon, whofe Inage appearing in the Water, was covered with a Cloud as the Afs was drinking, for whicli the poor Beaft was afterward brought to the Bar to receive a Sentence according to his deferts,

## That the Moon may be a World.

deferts, where the grave Senate being fet to examin the matter, one of the Counfel (perbaps wifer than the reft ) rifes up, and out of his deep judgment thinks it not fit that their Town fhould lofe its Moon, but that rather the Afs fhould be cut up,and that taken out of him ; which Sentance being approved by the reft of thofe Politicians, as the fubtileft way for the sonclufion of the matter, wasaccordingly performed. But whether this Tale were true or no, I will not queftion, however, there is abfurdity enough in that former Cuftom of the Ancients, That may confirm the Truth to be proved, and plainly declare the Infufficiency of common opinion to add true Worth or Efimation unto any thing. So that from that whichI have fid, may be gathered thus much.
I. That a new Truch may feem abfurd and impoffible, not only to the Vulgar, but to thofe alfo who are otherwile, Wife Men and Excellenc Schollars; and hence it will follow, that every new thing which feems to oppofe common Principles, is not prefently to berejected, but rather to be pry'd into witha diligent enquiry, fince there are many things which are yee lid fromus, and referv'd for furure Dichovery.
2. That it is not the Commonnefs of an opinion that can priviledg it for a truth; the wrong way isfometime a well beaten Path, whereas the right way (efpeci-

## That the Moon may be a World.

ally to hidden truths) may be lefs trodden and more Obfcure.
True indeed, the ftrangnefs of this 0 . pinion will detract much from its Credit; but yet we fhould know that nothing is in it felf ftrange, fince every Natural Effect has anEqual dependance upon its Caufe, and with the like neceffity doth follow from it ; fo that 'tis our Ignorance which makes things appear fo ; and hence it comes to pass,that many more Evident Truths feem incredible to fuch who know not the caufes of things: you may as foon perfwadefome Country Peafants, that the Moon is made of Green-Cheefe (as we fay) as that tis bigger than his Cart-Wheel, fince both feem equally to contradict his fight, and he has notreafon enough to lead him farther than his Senfes. Nay fuppore (faith Plutarch ) a Philofopher thould be Educated in fuch a Secret place, where he might not fee either Sea or River, and afterwards thould be brought out where one might thew tim the great Ocean, telling him the quality of that Water, that it is brackifh, Salt, and not Porable, and yet there were many vaft Creatures of all Forms Living in it, which makesufe of the Water as we do of the Air, queftionlefs he would laugh at all this, as being Monitrous lies, and Fables, without any Colour of Truth. Juft fo will this Truth, which I now deliver, appear unto others; becaufe we'never Dreamt of any fuch matter as a World in the Moon; becaule

## That the Moon miny be a World:

bceaufe the State of that place hath as yet been vailed from.our knowledg, therefore we can fcarcely affent to any fuch matter. Things are very hardly received which'are altogether ftrange to our Thoights and our Senfes. The Soul may with lefs diffi: culty be brought to beleive any abfurdity, when as it has formerly been acquainted with fome Colours and Probabilities for it; but when a new, and an unheard of Truth thall come before it, though it have good Grounds and Reafons, yet the underftand: ing is afraid of it as a ftranger, and dares notadmitit into his belief, without a great deal of Reluctancy and Trial. And befides, things that are not manifefted to the Senfes, are not affented unto without. Come Labour of Mind, fome Travail and difcourfe of the underftanding; and many lazy Souls had rather quietly repofe themfelves in an eafie Errour, than take Pains tofearch. out the Truth. The ftrangenefs then of this Opinion which I now deliver, will be a great hindrance to its belief, but this is not to be refpected by reafon it cannot be helped. I have ftood the longer in the Preface, becaufe that prejudice which the meer Title of the Book may beget, cannot eafily be removed without a ggreat deal of preparation, and 1 could nor tell otherwife how to Rectifie the Thoughts of the Reader for an Impartial Survey of the following Dif courfe.

I muft needs confefs; though I had often thought

## That the Moon may be a World:

thought with my felf that it was poffible there might be a World in the Moon, yet it feemed fuch an ungeouth Opinion, that I never durft difcover it, for Fear of being counted fingular, and ridiculous; but afterwàrd having read Plutarcb, Gallileus, Replar, withfome others', and finding many of mine own Thoughts confirmed by fuch ftrong Authority, I then concluded that it was not only pofible there might be, but probable that there was another habitable World in that Planet. In the profecuting of this Affertion, I faall firt endeavour to clear the way fromfuch doubtsas may hinder the fpeed or eafe of farther progrefs; and becaufe the Suppofitions imply'd in this Opinion, may feem to Contradit: the Principles of Reafon or Faith,it will be requifite that I firf remove this Scruple, Thewing the conformity of them to both thefe, pedd prov-: ing thofe Truchs that may make way for the Reft, which I hall labour to perform in the Second, Third, Fourth; and Fifth Chapters, and then proceed to conform fuch Propofrions, which do more directly. belong to the main point in Hand.

PROP.II.

## PROP.II.

That a Plurality of Worlds doth not: contraditl any Principle of Reafon or Faith.

TIS reported of Arijfotle, that when he - Faw the Books of Mofes, he commended them for fuch a Majeftick fite, as might become a God, but withal, he cenfured that manner of Writing to be very unfiting for a Philofopher: : becaufe there was inothing proved inthem, but matters were delivered, asif they would rathercommand, thian perfwade Belief. And ctis obferved that hie fers down nothing himelf; but he confiyms it by the ftrongeft Reafon that may be found, there being fearce an Argument of force for any Subjectin Philofophy, which may not be picked out of his Writings; and therefore 'tis likely, if there were in Reafon a neceffity of one only World, that he would have found out fome fuch neceiliary proof as might confirm it: Efpecially fince he Labours for it fo much in two whole Chapters. But now all the Arguments which he himfelf urges in this Subject, are very weak, and far

## That the Moon may be a World.

any Principle of reafon:: However, I will fet down the two chieftyfy his Arguments from his own Works; and from them you
may guefs the Force of the other.
i, The Firft is this, Since every Heavy lbid. Body doth naturally tend downwards, and every Light Body upwards, what a hudling and confufion muft there be; if there were two places for Gravity, and two places for Lightrefs: for it is Probable, that the Earth -of that other World would fall down to this Center, and fo Mutually the Air and Fire here afcend to thofe Regions in the other, which muft needs much derogate from the Providence of Nature, and caufe a great Diforder in his Works. But ratio bac eft minimé frma, De opeist( aiith Zancbiy). And if you well confider part:2.ilib.
 fee there is no Ground to fear any fuch Confufion; for Heavinefs is nothing elfe but fuch a quality as caufes a Propenfion in its Subject to tend. downwards towards its own: Center ; fo that for fome of thar Earth to come hither, would not be faid a Fall, bur an Afcenfion, fince it moved from its own Place, and this would be 1 m , poffible (faith Ruvio) , becuure againith Nature, and therefore no more to be feared De Caro then the falling of the Heavens. l.I.c. g.g. . ${ }_{i}^{i}$

If you reply, that then according to this, there mult be more Centers of Gravity Than one:; lanfwer, . Tis very Pqobable here are; hor can we well Conceive,
what any Peice of the Moon would do being feverd from the reft in the free and open Air; : but only return untoir again.

Another argument he had from his Mal. 12 c. $8 . \div$ fter Plato, that shere is bu one World, Diog.Laer. becaufe .sthere is but one firf Mover, lib. 3. God:

Infirma etiam eft bac ratio (faith Zancby) and we may juflly deny the Confequence, fince a Plurality of Worlds doth not take away theUnity of the firlt Mover. Ut enim forma jisbfantialis; fic primum efficiens apparentem'Jolum modo multiplicitatum induit per fignatum materiam ( (airh a Country-Man Nic. Hill.de of ours, ) As the Subftantial form, fo the Pinilojop. Epc.par. tice. 379. Efficient caufe hath only an appearing Multiplicity from irs Particular Matter. You may fee this point more Largelv Handled 'and thefe Arguments more Fully anfwered by Plutarch in his Book (why Oracles are filent ) and facob Carpentarius in his Comment on Alcinous.

But our oppofites the Interpretersthemfelves.: (who too often do jurare in verba magifti) - will grant that there is not any Strength in thefe Confequences, and certainly then fuch weak. Arguments could not convince that Wire Pbilofopher, who in his other Opinions was wont to be Swayed by the Strength and Power of Reafon: wherefore I thould rather think that he had fome by-refpect, which made him firft affient to this Opinion, and afterwards ftrive to Prove it. Perhaps it was becaufe

## Ibat the Moon may be aWorld.

he feared to Difpleafe his Scholar Alexander, of whom 'tis related that he Wept Plutarrbl. to hear a Difputation of another World, de trang. fince he had not then attained the Mo- mim. narchy of this; his reftlefs wide Heart would have Efteemed this Globe of Earth not big enough for him, if there had been another, which made the Stayrift fay of him,

> .eftuas infalix anguffo limite mundi. fuveral.
"That he did Vex himfelf, and Sweat in "his defires, as being Pend up in a narrow
"Room, when he was Confin'd but to one
"World. Before he thought to Sear himfelf next the Gods : but now when he had done his beft, he muft be content with fome Equal, or perhaps Superiour Kings.

It may be, that Arifotle was movedto this Opinion, that he might thereby take from Alexander the occafion of this Fear and Difcontent ; or elfe, perhaps Arijfotel himfelf was as loth to hold the Poffibility of a World which he could not difcover, as Alexander was to hear of one which he could not Conquer. 'Tis likely that fome fuch by-refpect moved him to this Opinion, fince the Argumentshe urges for it, are confert by kis Zealous followers and Commentators, to be very Slight and Frivolous, and they themfelves grant, what I am now to Prove, that there is not any Evidence in the Light of Natural Reafon, which C 2

## That the Moon may be a World.

can fafficiently manifeft that there is but one World .

But however fome may Object, would it not be Inconvenient and Dangerous to admit of fuch Opinions that do deftroy thofe Principles of Ariftotle, which all the World hath fo long Followed?
This queftion is much controverted by

Apologis proGatalio.

Etbic.l.t.
c. 6 .: fome of the Romif Divines; Campanella hatls Writ a Treatife in defence of it, in whom you may fee many things worth the Reading and Notice.

To it I anfwer, That this Pofition in Philorophy, doth not bring any Inconvenience to the reft, fince 'tis not Arifotle, but Truth that thould be the rule of our Opinions, and if they be not both found together, we nay fay to him, as he faid to his Mafter
 ג̇入ísur. "Though Plato were his Friend, "yet he would rather adhere to Trutf, "than him.
I muft needs grant, that we are all much beholden to the induftry of the Ancient Philofophers, and more efpecially to Arifrotle, for the greater part of our Learning; but yet 'ris not.Ingratitude to - fpeak a. gainit him, when he oppofeth Truth; for then many of the Fathers would be very Guilty; efpecially fufir, who tath writa Treatife purpofely againgt him.

But fippofe this opinion were falle, yet rtis not againft the: Faith, and fo it may ferve for the better confirmation of that
which is True; ; the Sparks of Errour, being forced out by Oppofition, as the Sparks of Fire by the ftriking of the Flint and Steel. But ftppofe too, that it were Heretical, and againft the Faith, yet may it be admitted with the fame Priviledg as Ariffotle, from whom many more dangerous Opinions have proceeded: as, Thar the World is Eternal; That God cannot have while to look after thefe Inferiour things; That after Death there is no Revard or Punifhment, and fưch like Blafphemies, which ftrike directly at the Fundamentals of our Religion.

So that it is juftly to be wondered, why fome fhould be fọ Superfitious in thefe Days, as to ftick clofer unto him, than unto Scripture, as if his Philofophy were the only Foundation of all Divine Truths.

Upon thefe Grounds, both St.Vincentius, and Serafinus de firmo, (as I have feen them quoted) think, That Arifettle was the Viol of Gods Wrath, which was poured out up: on the Waters of Wifdom, by the Third Angel ; But for my part, I think the World is much beholdenta him for all its Sciences. But yef rwere a thame for thefe later Ageş tọ Reft our Selves meenly upon the Labours of our Fore-fathers, as if they had informed us of ail things to be known; and when we are fet upon their Shoulders, not to fee further than they themfelves did. 'Twere a Superftitious, a lazy Opinion, to think Ariftotles works the Bounds and Li-

## That the Moon may be a World.

 mites of all Humane Invention, beyond which there could be no poffibility of reaching. Certainly there are yet.many things left to difcovery, and it cannot be any inconvenience for us, to maintain a new Truth, or Rectifie an Ancient Errour.But the pofition (fay fome) is directly againf Scripture, for
r. Mofes tells us but of one World, and his Hiftory of the Creation bad been very Imperfect, if God had made another.
2. Saint $70 b n$ fpeaking of Gods works, fays, he made the World in the fingular Number, and therefore there is but one: ’cis the Argument of Aquinas, and he thinks Democritus efteem fome blind Chance, and not any wife Providence to be the Framer of all things.
3. The Opinion of more Worlds has in Ancient times been accounted a Herefie, and Baronius affirms, that for this very Reafon Virgilius was cait out of his Bifhoprick, and Excommunicated from the Church:
Annal:

That the Moos may be a World:.
or Univerfe, firce it did not contain Univerfal perfection. : I have cited this Argumert, becaufe it is fo much ftood upon by Fullius De PbeCafar la Gälla, one that has purpofely writ nom. a Treatife againlt this Opinion which I now deliver ; but the Dilemma is fo blunt that it cannot cut on either lide, and the Conlequences fo weak, that I dare truit them without an Anfwer, And (by the way ) you may fee this later Author in that place, where he endeavours to prove a necefity of one World, doth leave the chief matter in Hand, and take much needlefs pains to difpute againt Demnoritus, who thought, that the World was made by the cafual concourfe of Atoms in a great Vacusm. It fhould feem, that either his caufe, or his skil was weak, or elfe he would have ventured upon a ftronger Adverfary. Thefe Arguments which I have fet down, are the chief. eft which I have met with againft this Subject, and yet the beft of there hath not force enough to endanger the Truth that I have delivered.
Unto the two firft, it may be anfwerd, that the Negative Authority of Scripture, is not prevalent in thofe things which are not the Foundamentals of Religion.
But youll reply, though it do not neceflarily conclude, yet 'tis probable, if there had been another world, we fhould have had fome notice of it in Scripture.
I anfwer, 'tis as probable that the Scrip. nets, they being very remarkable parts of the Creation;' and yet neither Mores, nor F.ob, nor the P $\int a l m s$, ( the places molt frequent in Aftroniomical Obfervations ) nor any other Scripture mention any of them, but the Sun and Moon. Becaule thediference betwixt them and the other Stars, was known only to thofe who were Learned Men, and had skill in Aftronomy. As for that expreflion in fob בוכבי בקר the Stars Job. 38. 7. of the Morning, it is in the plural Number, and therefore cannot properíy be applied Ifa.14.12. to Venus. And for that in Ifaiab $\mathrm{Y}^{2} \mathrm{JIT}$, ?tis confeffed to be a word of obfcure Interpretation, and therefore is but by guefs Tranflated in that Senfe. It being a true and common Rule, that Hebrai rei jederalis
Fromond: minime curioifi coleffitum sominum penurià laboVeffat.t.3. rant. The Jews being but little skilled in cap. 2. So 2 Reg. ${ }^{23} 5$. Aftronomy, their Language does wani:proper Exprefions for theHeavenly Bodies, and therefore they are fane fometimes to attribute the fame Name unto divers Conftllations.

- Now if the Holy Ghoft had intended to reveal unto as any Natural Secrets; certainly he would never have omitted the Mention of the Plannets, Quorium motus nibil eft quod de Conditoriss $\int$ apiertia teftatur E. Keplar. in widentius apud eos quis capiunt. Which do fo ${ }_{\substack{\text { trodurt. } \\ \text { Mart. }}}$ Evidently fet forth the Wiflom of the Creator: And therefore you muft know, that tis befides the Scopeof the Old Teltament

## That the Moon may be a World.

or the News; to difcover any thing unto us concerning the Secrets of Philofophy ; 'tis not his intent in the New Teftament, fince we cannot conceive how it might any way belong either to the Hiftorical, Exegetical, or Prophetical parts of it ; nor is it his intent in the Old Teftament, as is well Obferved by our Country-Man, Mafter WRIGHT., Non Mofis aut Prophetarum infritutum fuife videtur Matbematicas aliquas In Epiftad wut Pbyficas fubtilitates promulgare, Sed ad Gilbert: vulgi captum or loquendi morems, giuemad. modum nutrices infantulis folent; Sefe accoñmodare. ".Tis not the endeavour of Mofes or "the Prophets to difcover any Mathemati"tical or Philofophical Subrilties, but rather "to Accommodate themfelves to VulgarCa. "" pacities, and Ordinary Speech, as Nur. " fes are wont to ufe their Infants. True indeed, Mofes is there to handle the Hiftory of the Creation. But 'cis certain ( Gaith Calvin) that his purpofe is to Treat only of the vifible form of the World, and thofe Caloumin Gem. parts of it, which might be moft eafily underfood by the Ignorant and Ruder fort of People, and therefore we are not thence to expect the difcovery of any Natural Secret. Artes reconditas aljusde difoat qui volet ; bic Spiritus Dei omnes fimul fine exceptione decere voluit. As for more hidden Arts, they muft be looked for elfe-where; the Holy Ghoft did here intend to inftruct all without exception. And.therefore 'cis Obferved, That Mofes does not any where meddle

## 26 That the Moon may be a World.

meddle with fuch matters as were very hard to be conceived; for being to Inform the Common People, as well as others, he does it . after a Vulgar way, as it is Com. monly Noted, declaring the Original, chiefly of thofe things which are Obvious tothe Senfe, and being filent of other things, which then could not well be apprehended.
And therefore Pererius propofing the queltion, why the Creation of Plants and Herbs is mentioned, but not of Mettals and Minerals?
Anfwers. Quia ifarum rerum generatio off vulgo occultad ignota. Becaufe thefe things are not fo commonly known as the other; and he adds, Moles non omnia, fed manifefta omnibus enarranda culcepit. Moles did not intend to relate unto us the beginings of all things, but thofe only which were moft Evident unto all Men. And therefore too, Part I. Q. Aquinas obferves, that he writes nothing of 68.Art. 3. the Air, becaufe that being invifible, the People knew not whether there were any fuch Body or no. And for this very ReaEpif. i39. Ion, St. Ferom alfo thinks, that these is noSodererius thing exprett concerning the Creation of Sopercrius Angels, becaufe the Rute and Ignorant
$\operatorname{in} 2 \operatorname{Gc}$. Angels, becaute the Rude and Ignorant
Vulgar were not fo capable of apprehending their Natures. And yet notwithftanding, thefe are as remarkable parts of the Creation, and as fitto be known as another World. And therefore the Holy Ghoft too, ufes fuch Vulgar Expreffions, which fet things forth rather as they appear, than as

That the Moon may be a World.
Whey are, as when he calls the Moon one of.: Tbe greater Lights, whereas'tis the leaft that Gen. I: i6.' we can fee in the whole Heavens. So afterwards fpeaking of the great Rain which Gen. If: drowned the World; he fays,The. Windows Mala.3.10. of Heaven were opened, becaufe it feemted to come with that Violence, as if it were poured out from Windows in the Firmament.

And in Reference to this, a drowth is defcribed in Sundry other* places, by the *Deut.ir. Heavens being hut up. So that the Plirafes ${ }^{17}$. which the:Holy Gholt fues, concerning thefe ${ }_{35}$ Reg.3. things, are not to be underftood in Liter- Luk
 al Senfe; but rather as Vulgar Expref- * fions; and this Rule is fet down by Saint Anfins, where feaking concerning that in l.2. in Gen. the Pfalm, who ftretched the Earth upon the Pfal. 136.6 Waters; he Notes, that when the Words of Scripture fhall feem to contradict common Senfe or Experience, there, are they to be underfood in a qualified Sence, and not according to the Letter. And 'tis obferved, that for want of this Rule, fome of the Ancients have faftened ftrange Abfurdities upon the words of the Scripture. So Saint Heximer. Ambrofe efteemed it a Herefie to think that lib. 2 . the Sun and Stars were not very Hot, as Item Biffil: being againft the Words of Scripture, Pfalm. Hom. 3. int 19. 6. where the P Palmift fays, that there Gimef. is nothing that is hid from the Heat of the Wild. 2.4. is nothing that is hid from the Heat of the 17.5 . Sun. Soothers there are that would prove Ecclus.43. the Heavens not to be Round, out of that 3,4 place, Pfal. 104.2. He ftretched out the they

## 28 <br> That the Moon may be a World.

Camirct. . Yeavens like e Curtain. Şo Procopius alfo Gem. Was of Opinion, that the Earth was Founded upon the Waters; Nay, he madeit part of his Faith, proving it ouf of P Pal. 242. He bath Founded the Eartb upon tbe Seas, and Eftablifbed it upon the Floods. Thereand fuch like Abfurdities have followed, when Men look for the Grounds of Philoophy in the Words of Scripture. So that, from what hath been faid, I may conclude,that the filence of Scripture, concerning any other World, is not Sufficient Argument to prove that there is none. Thus for the Two firft Arguments.
Unto the Third, I may Anfwer, That this very Example is quoted by others, to fhew the Ignorance of thofe Primitive Times, who did fomtimes condemn what they did not underftand, and have often cenfur'd the Lawful and undoubted Parts of Mathematicks for Heretical, becaufe they themfelves could not perceive a Reafon of it. Andtherefore their Practice, in this particular, is no Sufficient Teftimony againt us.

But Laftly, Ianfwer to all the above named Objections, That the Term (World) may be taken in a double Senfe, more Generally, for the whole Univerfe, as it Implies-in it the Elementary and Ethereal Bodies, the Starsand the Earth. Secondly, more Particularly, for an Inferiour World connifiting of Elements.
Now the main Drift of all thefe Argu.

That the Moon may be a World.
ments, is to confure a Plurality of Worlds in the firt Senife, and if there were any fuch, it might, Perhaps, feem ftrange, that Mofes, or St. Fobn fhould either not Know, or not mention its Creation. And V trgilius was Condemned for this Opinion, becaufe he held, qudd fit alius minndus fub teria, aliufque Sol © Luna, (as Baronius,) That wirhin our Globe of Earth, there was another World, another Sun and Moon, and to he might feem to Exclude this from the Number of the other Creatures.

But now there is no fuch Danger in this Opinion, which is here delivered, fince this World is faid to be in the Moon, whofe Creation is Particularly Expref.

So that in the firft Senfe, I yeild, that there is but one World, which is all that the Arguments do Prove ; but Underftand it in the fecond Senfe, and fo I Affirm; there may be more; nor do any of the above named Objections Prove the Contrary,

Neicher can this Opinion derogate from the Divine Wifdom, (as Aguinas thinks) but rather Advance it, fhewing a Compendium of Providence, thar could make the Came Body a World, and a Moon; a World for Habitation, and a Moon for the ufe of others, and the Ornament of the whole Frame of Nature. For as the Mem. bers of the Body ferve not only for the Prefervation of themfelves; but for the Ufe and Convenience of the Whole, as the

That the Moon may be a World: Hand Protects the Head as well as raves Cufenuls de doct. ignor. l. 2 c. 12 . where each one nay ferve as well for the Confervation of that which is within it, as the Help of others withour ic.
Comment. $i_{n}$ Gen. 2t. 19. Art. 2.

Mer/ennus a late Jefiuit, Propofing the Quettion, whether or no the Opinion of more Worlds than one, be Heretical, and
againft the Faith? He anfwers it. Negatively, becaufe it does not Contradita any Exprefs : place of Scripture, or Detemina. tion of the:Church. Andthough (faith he) it feems to be a rafh Opinion, as being againtl the Confent of the Fathers; yer, if this Contreverfie be chiefly Philofophical, then their . Authorities are not of fuch Weight. Unto this it may be added, that the. Confent of the Fathers is Prevalent only in fuch Points as : were firft Controverted amongft them; and then generally decided one way, and not in fuch other Particulars as never fell under their Examination and Difpute.
I have now in fome Meafure, fhewed that a Plurality of worlds does not Contradict any Principle of Reafon, or place of Scripture, and fo cleared the firlt part of that Suppofition which is implied in the Opinion.

It may next be enquired, whether 'tis poffible there may be a Globe of Elements in that which we call the 不thereal parts of the Univerfe; for if this (as it is according to the common Opinion) be Priviledged fromr

That the Moon may be a World.
from any Change or Corruption, it will be in vain then to Imagin any Element there, and if we will have another World, we mult then feek out fome other place for irsscituation. The Third Propofitionitherefore fhall be this,

## PROP.III.

That the Heavens do not comfit of any fuch Pure matter, wbich can PriviHedg them from the like Change and Corruption, as thefe Inferiour Bodies are Liable unto.

IT hath been often queftioned amongft the Ancient Fathers and Philofophers, what kind of matter that fhould be, of which the Heavens are Framed. Some think that they confift of a Fifth Substance, diftinct fom the Four Elements, as Ari- De Calo frotle holds, and with him fome of the latel.1. c. 2 . School--Men, whofe Subtil Brams could not be content to Attribute to thofe Vaft Glorious Bodies but common Materials, and therefore they themfelves had rather take Pains to prefer them to fome extraordinary Nature; whereas notwithftanding, ${ }^{*}$ Colleg. all the Arguments they could Invent, were comimil. not able to Convince a neceflity of any decalo.fir. fuch Matter, ws is confent by their own ${ }^{\text {c.2.q.q.6.ntr. }}$
fide. It were much tobe defirêd, that rthere Men had not in ocher Cafes; as well as shis, Mutriplied things without Neceffity, : and as if there hiad not been enough to be known in the. Secrets of Nature;, have Spun out new Subjects from their own Brains, to find more Work for Future Ages; I fhall not mention their Arguments, fince tris already Confeft, that they are none of them of any neceffary Confequence? and befides you may fee them fet downin any of the Books de Call.
But it is the General Confent of the Fathers, and the Opinion of Eombard, that the Heavens confit of the fame matter with
bu Hexaren thefe Sublunary Bodies. St. Ambrofe. is fo lib.4. confident of it, that he efteemsthe contrary, a Herefie. True indeed, they differ much among themifelves, fome thinking sthem to be mäde of Fire; other's of Water, and others of böth; buit hèrein they: generally agree, that they are all framed of

## Enoratin

 fome Element or other. Which Diomysus Gamplath Cartbrfianus collects from that: place inso. Genefis, where the Heavens are mentioned in their Creation, as divided only in diftance from the Elementary Bodies, and notas being made of any new Marter. But concerning this, you may fee fundry. DifcourEts moreat large in Lindowicus Molina, Ens
## 7hat The Mon may be. a.World.

 The Vornerable Bede thought the plannets to dierum. confit of all the Four Elements ; and otis difpus. 5. - likely fharthe other parts are of an Aereous Subtance; as will be hepwed afterward, however, I cannot now fand to Recite the Arguments for either; 1 have only urged thefe Authorities to countervail $A$ rijfotle, and the School-Men, and the berter to make way for a proof of their Corruptibility.

The next thing then to be enquired after; is, whether they be of a Corruptible Na ture; not whether they can be deftroyed by God; for this, Scripture puts out of doubr.

Nor whecther or no irra long time they would wear away and grow worre; for from'any fuch Fear they have been lately priviledged. Bur whecher they are capable of fuch changes and vicifitudes, as this Inferioin World is Lyable unto?

The two cleif Opinions concerning this; have'both Erredin fome Extremity, the one fide going fo far from the ocher, that they have both gone beyond the Right, whilit Ariffotie hath oppofed the Truth, as wellas the Stoicks.
Some of the Ancientshavethought; that the Heavenly Bodies have ftood in need of Nourifhment from the Elements, by which they were continually Fed, and fo had dis vers Alterations byi reafon of their Food? rhis is Fachered on Heraelitus, followed by

Plutarct. that great Naturalift Pliny, and in general
deplas.
pbilof.1.2. Attribured to all the Stoicks. You may fee Serreca exprenly to this purpole in thefe Nat.Hif. Words: Ex ifita alimema ommibus animad. 2c.9. libus, ominttus faths, ommibus fellisis dividunter, Nat quaff. binc profortur quig fuftiveantur tot Sidera tam ib. 2. c. 5. exercitata, sam avidap pat dient, roctémque, wt in opere, ita in pafis. Speaking of the Earth, he fays, from thence it is that Nonrifhment is Divided to all the Living Creatures, the Plants and the Stars; herice were fuftained fo many Confiellations, fo Laborious, fo Greedy, both Day and Night, as well in their Feeding as Working. Thus alfo LucanSings,

## Nacnor Oceano porfi. phabrimgue polimm; Credimus.

1. Aprfel. Unto thefe Ptolomie alio that Learned Egyptian feemed to agree, when he af firms that the Rody of the Moon is Moifter, and Cooler than any of the other Plannets,by reafon of the Earthly Vapours that are exhaled unto it. You fee thefe Ancients thought the Heavens to be fo far from this lmmagined heorrupribility, that rather like the weakeft Bodys they tiood in need of fome Continual Nourifhment, without which they could hot Subfirt.

But Ariftctle and his Followers were fo

De culo.
l. 1.c.3. far from this, that they thought thofe Glorious Bodies could not Contain within them any fuch Principles as might make
them Lyable to the leaft Change or Corruption; and their Chief Reafon was, becaufe we could not in so long a Space Difcernany alteration amongft them; But unto this I Anfwer.

1. Suppofing we could not, yet would it not hence Follow that there were none; as he himfelf in Effect doth Conitefs in another Place; for Speaking Concerning bur knowledg of the Heavens, he fays, De celol. 12 'tis veřy Imperfect and Difficult; by Rea- cap. 3: fon of the Vaft diftance of thofe Bodies from uis, and becaufe the Claanges which may Happen unto them, are not either Big enough, or Frequent enough to fall within the Apprehenfion and Obfervation of our Senfes: no wonder then if he himbfelf be Deceived in his Áfiertions. Concern. ing thefe Particichars. But yet, in this he Implies, that if a Man were nearer to thefe, Heavenly Bodies, he would be a fitter Judge, to decide this Controverfie than himfelf. Now its our Advanrage, that by the help of Galileus his Glafs, we are Ad: vanced nearer unto them, and the Heavens are made more. Prefent to us than they were before. However, as is is with us where thete be many Viciffitudes and Suc, cefflons or things, though tbe Efrtb abidetb' for Ever: So likewife may it be amongft the Plannets, in which tho there flould be divers Alterations, yet they, themfelves may fill Continue of the fame Quantiry and Kight.

## That the Moor may be a World.

2. Though we could not by our Serifes fee fach Alterations, yet our Reafon might perfiaps Sufficiently Convince us of them. Nor can ${ }^{4}$ we well Conceive how the Sun fhould Refleit againit the Moon, and yet not Produce form Alteration of Heat.- Diogenes the Philofpher was hence Perfwaded, that thofe Scorcing Heats had Burnt the Moon into the Form of a PumiceStone.
3. I anfwer, that there have been fome Alterations Obferved there; Witnefs thofe Commets which have been feen above the Moon. As alfo thofe Spots or Clouds that Encompars the Body of the Sun, amongft which; thereis a frequent Succeffion by a Curruption of the Old, and a Generation of New. So that though Arifotle's Cori: fequence were Sufficient; when he Proved that the Heavens were not Corruptable, becaufe there have not any Changes been Difcovered in them : yet this by the fame Reafon muif be as prevalent, that the Heavens are Corruptable, becaufe there have been fo many Alterations Obferved there; But of there, together with a farther Confirmation of this Propofition, I fhall have Occafion toSpeak afterwards; In the mean Space, I will refer the Reader to that Work of Sbeiser, a late fefuii, Lib.4. par. which he Titles his Rofa Urfina, wherehe 2. cap 24 may fee this Point concerning the Corrup. 35.
tibility of the Heavens, Largely Handled, and Sufficiently Confirmed.

## That the Moon may be a Wrivld.

37There are fome other things, or which I might here take an occafion to Enlarge my felf; but becaufe they are Directly Handled by many others, and do:not:Immediately belong to the Chife matter in Hand, I fhall therefore refer the Reader to their Authors, and Omir any large Proof of them my felf, as defiring all 'Poffible Brevity.

I: The firft is tlus: That there are no folid Orbs. If there be a Habitable World in the Moon (which I now affirm) it muft follow, that her Orb is not Solid as Arifortle fuppofed; and if not Hers, why any of the other. I rather think that they are all of a Fluid (perhaps Aereous) Subttance. Saint Ambrofe, and Saint Bafjl did If.51. 6. endeaver to Prove this out of that Place in $A_{n t}$. left. Ifay, where they are compared to Smoak, l.1.c. 4 . as they are both Quoted by Rhodiginus. Eufebius Nicrembergius doth likewife from Hift. nat. that Place confute the Solidity and Incor- l.2.c.11.I3 ruptibility of the Heavens, and Cites for the fame Interpretation the Authority of Euftachius of Antiock; and Saint Auftin, Is Ilib.fip. I am fure, in one Place feems to Affent Genad lit. unto this Opinion, though he does often in his other Works Contradict it.

If you Efteem the Teftimony of the Ancient Fathers, to be of any great Force or Confequence in a Philofophical Difpute, you may fee them to this Purpofe in $\mathrm{Six}_{\mathrm{x}}$ ius Serienfis lib. 5. Biblioth. annot. 14. The Chief: Reafons, that are Commonly urged D 3
$\therefore$ Ihat the Moon may be a World. for the Confirmation of it, are Briefly thefe Three.
I. From the Altitude of divers Comets, which have been Obifrived to be above the Plannets, through whofe Orbs (if they had beell Solid) there would not have been any Paflage. To there may be added thofe Leffer Plannets lately difcovered a. bout Fubetar and Seturne, for which Aftronomers have not yet Framed any Drbs.

2 From that uncertanty of all Aftro: nomical Obfervations, which will follow upon the Suppofition of fiuch Solid Spleres. For thenwe thould never Difcerne any Star but by a Multitude of Refractions, and fo Confequently we cquld not Pof. fible find their true Situations either in Re. feet of us, or in Regard of one another Since what ever the Eye Diferns by a Re: fracted Beam, it Apprehends to be in fomeother flace than wherein it is. But now this would be fuch an Inconvenience, as would quite Subvert the grounds and whole Art of Aftronomy, and therefore is by no Mans to be Ad mitted.

Untothis it is commonly Anfwered, that all thofe Orbs are Equally Diaphanus, though not of a Continued quantity. We reply, that Suppofing they were, yet this cannot linder them from being the Caufes of Refration, which is Producedas well py the Diverfity of Superficies, as the pifferent:

That the Moey may be a World.
Different Perpicuity of Eodies. Two Glalies pur together, will caufe a Divers Refraction from another Single one that is but of Equal Thicknefs and Perspicuity.

3 From the DifferentHeight of the fame Plannet at feveral times. For if According to the ufual Hypotbefis, there fhould be fuch Difinint, Solid Orbs, then it would be Impofifible that the Plannets fhould Intrench upon one anothers Orbs, or that two of them at feveral Times thould be above one another, which notwithfanding hath been Proved to be fo by Later Experience. Tyybo hath Obferved, that Keuus is fomtimes nearer than the Sun or Mercury, and fomtimes farther off than both; which Appearances Regionontanus himfelf does Acknowledg, and withal, does Confefs that they cannot be Reconciled to the common Hypotbefis.
But for your Better Satisfaction herein, 1. thall Refer you to the abowe Named Scbeiner, in his Rofa Urfina, in whom yod Lib 4 . 1 . 15 may fe both Authorities and Realon,, , 4 app. $7 .{ }^{25}$ very Largely and Dintinclly fet down for 30 . this Opinion. For the better Confirmation of which he adjoyns alfo fome Aythentical Epittles of Fredericus Cafuus. Lytceus, a Noble Prince, written to Bellarmise, Conraining Divers Reafons to the fame Purpofe. Youl may alfo fee the fame Truth fet down by . Fobannss Pena, in his Preface to Euchds Opticks, and Cbriftopb. - Lothmanys, both who thought the Firma-

## That the Moon mayze a Wortd.

Deftela. ment to be only") Air :re and though"the
${ }^{15.72 .11 . ~}{ }^{3}$ Noble Jo tho do Difpute againft them, yet
c. 9. hebimetfholdes ogrid propius ad veritatis -perecralia accedtit bac opinio, quam Arifotitioa vulgariter approbata, que calum pluribus reḍleüss à que imperviis orbibu's citra! rem replezot?: "That this Opinion comes tiearer "to the Truth, than-the Common onte of "Arffotle, which hath to no parpofe filled "the Heavens with fuch real and Imper. © vious Orbs.
2. There is no Element of Fire, which mutt be held with this: Opinion here Delivered; for if we Suppole a World in the Moon, then it will follow, that the Sphear of Fire, either is not there were 'tis ufnally - placed in the Concavity of his Orb; or elfe that there is no fuch thing at all, which is nioft Probable, fince there are not any fuch 'Solid Orbs, that by their swift Motion might Heat and Enkindle the adjoyning Air, which is Imagined to be the Reafon of that Element. The Arguments that are Commonly Urged to this Purpofe, are thee: :
I. That which was before alledged Concerning the Refractions which will : be caufd by a Different Medium. For if the Matter of the Heavens be of one Thickners, and the Element of Fire another, and the upper Region of Air Diftinct from lint! thefe, and the Lower Region feveral from all thereft, there will then he fuch a. Multipltcity of Refradions, as mult Neceflarily

## That the Moon may be a Worlit:

Neceflarily Deftroy the Cerrainty of alt Atronomical Obervations All whichin: converiences might be Avoided, rbys fuppofing (aswe do) that there it oblyone Orb: of Vaporurs Air which Encompafies our Earth, all the reft being $C$ ttbereala añd of the Jame Perficuity.
2. The Scituation of this Element does no way agree with Arifotles own Principles, or that common Providence of Natture, which we may Difcern in Ordinary Matters.' For if 'the Heavens be without all Elementary Qualities, as is Ufally fuppofed; then it would bea very Incongruous thing for the Elemerit of Fire to be placed Immediattly next unto it: Since che Heat of this is the moit Powerful and Vigorous Quality that is amongit all the reft; And Nature in her other Works, does not join Extreams, but by fomething of a middle Difpofition. So in the yery Frame of bur Bodies, the Bones which are of ra Hard Subftance, , and the Flefh of a Soft, are not joined together but by the Inter: ceffion of Mambranes and Grifels, fuch as being of a Middle Nature may fitly come Betwixt.
3. 'Tis :not Conceiveable for what URe or Benefit there fhould be any fitch Element in that Place, and Certain it is; thar Nature does . not do any thing in Vain.
4. Betwixt two Extreams there can be but one Medium, and therefore between thofe

## That the Moon way be a World.

thofe two Oppofite Elements of Earth and Water, it may feem more Convenient to place only the Ayr, which Thall Partake of Middle Qualities different from both.

5 Fire does not feem fo Properly and 5 Direftly to be Oppofed to any thing as Ice, and if the one be not an Element, why fhould the other?
If you Object that the Fire which we Commonly. ufe, does always tend upwards. I anfwer, This cannot Prove that there is a Natural place for fuch an Element, fince our Adverfaries themfelvesdo grant that culinary and elemestari Fire are of different kinds. The one does Burne, Shine, and Corrupt its Subjects; the other difagrees from it in all thefe relpects. And therefore from the Afcent of the one, we cannot Properly Infer the Being or Situlation of the other.

But for your. farther Satisfaction herein, you may Perufe Cardos; fobannes Pena, that Learned Frenchman, the Noble Tyebo, with divers others who have purpofely Handled this Propoftion.
3. I might add a Third, viz: that there is no Mufick of the Spheres ; for if they be not Solid, how can their Motion caufe any fuch Sound as is Conceived? I do the sather Meddle with this, becaule Plutarcb Speaks : as if a Man might very Convepiently hear that Harmony, if he were an Inhabitant in the Moon. But I guefsthat he faid this our of Incogitancy, and did not well Confider thofe Neceffary Confe-

## That the Moow may be a World.

guences which Depend upon his Opinion. However the World would have no great Lols in being Deprived of this Mufick, unlefs at fometimes we had the Priviledg to hearit: Then indeed Pbilo the Jew thinks it would fave us the Charges of Dyet, and we might Live at an eafy Rate by Feeding at the Ear only, and Receiving no other nourihment, and for this very Reafon ( gays he) was Mofes Enabled to tarry Forty Days and Forty Nights in the Mount without Eating any thing, becaufe he there heard the Melody of the Heavens. --Rifum teneatis. Iknow this Mafick hath had great Patrons, boul Sacred and Proppane Auchors, fuch as Ambrofe, Bede,' Boetius, Ayfeline, Plate, Cicero, and others; bur becaufe it is not now, I think, Affirmed by any, Ithall not therefore beftow either Pains or Time in Arguing againft it.

It may fuffice that I have only Named thefe Three latt, and for the two more neceffary, have referred the Reader to others for Satisfaction. I thall in the next place Proceed to the Nature of the Moons Body; to know whether that be Capable of any fuch Conditions, as may make it poflible to be Inhabited, and what thofe Qualities are whesein it more nearly Agrees with our Earth. $\because \quad \therefore \quad$ Opac̈ous Body.

1Shall . not need to fland long in the Proof of this Propofition, fince it is a Truth olready agreed on by the General Confent of the moft and the beft Philofophepe :
-I. It is Solid, in Opofition to Filud, 「as is the Ayr; for how ! otherwifeiconild is Weat-back, the Light which it reqeivesform the Sun. 3
But here it may be Queftioned, wlether or no the Mpont beftow her bighs upan us, by the Reflection of the Sunbeams from the Superficies of her Body, orelfe by her ownillumiation? Some there are who: Affirm this latter part. So (a)
2 De culo Averroes: (b) Colins Rbodiginus, (c) Fu-
i.2.com.49. liut' Cafor, owc. And their Reafon is beh Ant.le- caure this Light is Difcerned in many
ciom.li.2o. cion.li20. Places, whereas thofe Bodies which give
c. cDe pbe-Light by Reflexion, can there only? be

Lume.c.II. perceived where the Angel of Reflexion is Equal to the Angel of Incidence and this is only in one Place, as in a LookingGlafs, thofe Beams which are reflected from it, cannot be Perceived in every place where you may fee the Glafs, but only

That the Moors may be a Worldy only there where your Eye is plated on the farte tine whereon the Beams are ! Refiected.

But to thislanfwer, That the Aftgument will not hold of fich Bodies, 'whote Superficies, is fill of Unequal parts and Gibbofities as the Moon is. Wherefore it is as well the more Probable; as the more common Opinion, that her Light Proceeds from both thele Caufes, from Reflexion and Illumination; nor doth it herein differ from our Earth, fince that alfo hath fome Light by Illumination : for how otherwife would the Parts about us in a Sun-fhine Day appear fo Bright, when as the Rays of Reflexion cannot Enter into our Eye?

For the better Illuftration of this, we may Confider the feveral ways whereby divers Bodies are Enlightned. Either as Water, by admitting the Beams into its: 8 ibb? flance; or as Air, and thin Clouds, by Tranfmitting the Rays quite thorow their' Bodies; or asthofe things that are of an Opacous Nature, and Smooth Superficies, which Reflect the Light only in one Pläce; or elfe, as thofe things which are of an Opacous Nature. and Rudged Superficies, which by a kind of Circumfluous Reflexion, are at the fame time Difcernable in many Places; as our Earth; and the plapty. Po Moon.
2. It is Compact, and not a Spungey ib.opt, $4 i$ ib. 4 and Porous Subftance. But this is Denyed CCom.Pur, by (a)Diogenes, (b) Vitellio, and (c)Reinoldus;
and rome others, who beld the Moon to be of the fame kind of Nature as a Pumice Stone; and this, fay they, is the Reafon why in the Suns Eclipfes there Appears within her a Duskifhridddy Colour;becaufe the Sun Beams being Refracted in pafling through the Pores of her Body, mult neceflarily be Reprefented under fuch a Colour.

But I Reply, if this be the Caufe of her Rednefs, then why doth the not appear under the fame form when the is abo"t a, Sextile Afpect, and the Darkned part of her Body is Difcernable? for thenalfo do the fame Rays pafs. through Her, and: therefore in all likely hood mould Produce the làme Effect; and notwithftanding thofe Deams are then Diverted from us; that they cannot enter into our Eyesby a ftraight Line, yet muft the Colour fill Remain Vifible in her Body. And befides, according to this Opinion, the fpots would not always be the fame, but Divers as

$\therefore$ ".
But, the greateft:Difference which may feem to make our Earth altogerher unlike the Moon, is; becaufe the one is a Bright Body, and hath Light of its own, and the: other a Grofs, DarloBody; which: cannot. Shine at all. 'Tis requifite therefore that in

## That the Moon may be a World.

he next place I clear this douibt, and fhew that the Moon hath no mote light of her town than our Earth.

## Propofition. V.

## That the Mooin bath not any Light of her own.

TWas the fancy of fome of the Jews, and more efpecially of Rabbi Simeon, that the Moon was nothing elfe but a Con- Toftatus in tracted Sunn, and that both thofe Plannets at their firlt Creation, were equal both in Hyeron. de Light and quantity. For, becaute God Hebraodid then call them both great Lights, there- maf.12.c.4: fore they inferred that they muft be both equal in bignefs. But a while after (as the Tradition goes ) the Ambitiotis Moon put up Her Complaint to God againft the Sin, Shewing that it was not fit there fhould be two fuch great Lights in the Heavens; aMonarchy woul dbeit become the placeof Order and Harmony. Upon this, God Commanded Her to contract her felf into a:Narrower compais ; but the being mach difcontented hereat, replies, What! becaufe I have fooken that which is Reafoin: and Equiry, mufl I therefore be diminifh-
ed? This Seatence could not chufe but much trouble Her; and for this Reafon was fhe in great diftrefsand greif for along rpace, but that her Sorrow might be fome way pacilied, God bid her be of good Cheer, becaule her Priviledges and Charter fhould be greater than the Suns; he fhould appear in the Day time only, the both in the Day and Night; but her Melancholly being not fatisfied with this, fhe replied again, That that alafs was no benefit; for in the Day time, fhe fhould be either not feen, or not noted. Wherefri:e, God to Comfort Her up, promifed, that his People the Ifraelites mould Celebrate atl their Fealts and Holy Days'by a Computation of her Months; but this being not able to Content Her, the has looked very Melancholly ever fince; however the hath ftill relerved muchlight of her own.

Others there were, that did think the Moon to be a Round Globe ; the one half of whofe Body was of a bright Subftance, the other half being dark; and the divers Converfions of thofe fides towards our Eyes, caufed the Variety of her appearances: of this Opinion was Berofus, as he
a Lib.9. AcchiteEluma.

## bNaratio

 $I_{j}$ imio ทum. tr.m. ep-1t9. is cired by (a) Vitruvitss; and (b) St: Auftis: thought it was probable enough. But: this fancy is almoft equally abfurd with the former, and both of them found rather like Fables, than Philofophical Truths: You may Commonly fee how this latter does Contradict frequent and eafie experience;
## That the Moos may. be a World:

## for 'ris obberved, that that foot which is

 perceived about her middle, when fhe is in the Encreafe, may be difern'd in the fame place when fhe is in the Full: whence it muft follow, that the fame part which was before darkened, is after inlightened, and that the one part is not always Dark, and the other Light of it felf. But enough of this, I would be loth to make an Enemy, that I may afterwards overcome him, or beltow time in Proving that which is already granted, I fuppofe now, that neither of them hath any Patrons, and therfore need no Confutation.'Tis agreed upon by all fides, that this Plannet receives moft of her Light from the Sun; bitt the cheif controverfie is, whether or no the hath any of her own? The greater Multirude affirm this. Cardan amonght the rett, is very conlident of it, De Subtil. and he thinks that if any of us werein the ${ }^{\text {lib.4. }}$ Moon at the time of her greatelt Eclipfe, Lunam afpicerexnus yon jeciiss ac innumeris cereis Jplendidifimis accenfis), atque in eas oculis defxis cacutivemus; "Wee fhould "perceive fo great a Brightnefs of her own, "that would Blind us with the meer fight, "and when the is Enlightened by the Siun, "then no Eagels eye (if there were any "there) is able to look upon Her. Thiis cardon fays, and he doth but iay it, without bringing any Proof for its confirmation. However I will fet down the Arguthents' that are ufually urged for this $\mathrm{E}_{2} \mathrm{Z}^{2}$ Opinion,

## That the Moon may be a World.

Opinion, and they are taken either from Scripture, or Reafon; from Scripture is urged that Place, 1 Cor. 15 . where it is faid, There is cne Glory of the Sun, and anothet Glory of the Moon. Ulyjfes Albergettus urges that in Math. 24.20. in a-
 not give ber Ligbt: therfore (fays he) the hath rome of her own.

But to thefe we may eafily Anfwer, tha the Glory and Light there fpoken of, may be faid to be hers, though it be derived, as you may fee in many other inflances.

The Arguments from Reafon are taken either.
r. From that Light which is Difcerned in her, when there is a total Eclipfe of her own Body, or of the Sun.
2. From the Light which is Difcerned in the Darker part of her Rody, when the is but a little Diftant from the Sun.
r. For when there are any total EclipSes, there appears in her Body a great rednefs, and many times Light enough to caute a remarkable thade, as common Experituce doth fufficiently manifeet: but this cannot come from the Sun, fince at fuch times either the Earth or her own Body fhades her from the SunBeams; therfore it muft proceed from her own Light.
2. Two or three Days after the new Moon,

That the Moon may be aWorld. 53
Moon, we may perceive light in her whole Body, whereas the Rays of the Sun reflect but npon a fmall part of that which is Vifible; therefore 'tis likely that there is fome Light of her own.

In anfwering to thefe Objections, I fhall firlt fhew, that this Light cannot be her own, and then declare that which is the true Reafon of it.

That it is not her own, appears,

1. Becaufe theri the would always retain it, but fhe has been fometimes altogether Invifible, when as notwithfanding fome of the fixed Stars of the fourth or fifth Magnitude might eafily have been Keplar. difcerned clofe by her, As it was in the epit. Year 1620.
2. This may appear likewife from the fect. 2.

Variety of it at divers times; for 'tis commonly Obferved that fometimes 'tis of a Brighter, fometimes of a Darker appearance, now Redder, and at another time of a more Duskifh colour. The Obfervation of this variety in divers Eclipfes, yon may fee fet down by Keplar and Opt. Amany others. But now this could not be, ftronc.7. if that Light were her owil, that being num.3. Conftantly the fame, and without any Reafon of fuch an alteration: So that thus I may argue.

If there were any Light proper to the Moon, then would that Plannet appear Brighteft when fhe is Eclipfed in her Perige being neareft to the Earth, and io confe-
$\mathrm{E}_{3}$ quently
quently more Obfcure and Duskifh when fhe is in her Apoge or fartheft from it; the Realon is, becaufe the nearer any Enlightened Body comes to the Sight, by fo much the more ftrong are the Species and the better perceived. This fequel is granted by fome of our Adverfaries, and they are the very Words of Noble Tycbo, Si Lusa genuino gauderet lumine, utig; cum in umbure terra eljet, illud non amitteret, Sed eo evidentitus exereret; ; mne enim lumers in tenebris, plus (plendet cum alio mojore fulgore ncoz prepeditur. If the Moon had any Light of her own, then would fhe not lofe it in the Earths Shadow, but rather fhine more Clearly; fince every Light appears greater in the Dark, when it is not hindered by a more Perficuous Brightners

But now the event falls out clean conReinhold trary, (as Obferyation doth manifeft,
and our Opfofites themfelyes do grant) the Ninon appearing with a more reddifh and Clear Lingt when the is Eclipfed, beng in her sipgge or fartheit diftance, ares a mare blackith sron colour whenfhe is inher verige or nearelt to us, therefore fhe !deh mot any Light of her own. Nor 3 mas we tink thar the Earths fhadow can clouit - $\because$ proper Light of the Moon from $A_{p i s i n g y ~ a ~ o r ~ t a k e ~ a n a y ~ a n y ~ t h i n g ~ f r o m ~}^{\text {a }}$ her ina. reic Eighanefs; for this were to thim anady to be a Endy, anOpinion ahogsther misbecoming a Philofopher,

## That the Moon may be aWerld.

as Tycbo grants in the fore-cited place, Nec numbra tetrec corporeum guid eff, aut denfa aligua fubftantia, ut Luna lumen obtenebrare poffit, alque id vifui noffro preripere, fed eft quedam privatio luminis folaris, ob interpofitum cpacum corpus terva. Nor is the Earths fhadow any Corporal thing, or thick fubftance, that it can cloud the Moons Brightnefs, or take it away from our Sight; but it is a meer privation of the Suns Light by Reafon of her Interpofition of the Earths Opacous Body.

3 If the bad any Liglit of the own, then that would in it feif be either fuch a ruddy Brightnefsas appears in the Eclipfes, or elfe fuch a Leaden duskifh Light as we fee in the Darker parts of her Body, when she is a little paft the Conjunction. (That it muft be one of thefe, may follow from the Oppofite Arguments ) but it is neither of thefe; therefore fhe hath none of her own.

I 'Tis not fuch a ruddy Light as appears in Eclipfes; for then why can we not fee the like rednefs, when we may difcern the Obfcure parts of the Moon?

You will fay, perhaps, that then the nearnefs of that greater Light takes.away that Appaerance.

I Reply, this cannot be ; for then why does Mars fhine with his wonted Rednelf, when he is near to the Moon? or why cannot her greater Brightnefs make him appear White as the other Plannets? nor

E 5 can

## That the Moon may be a World.

can there be any Reafon given why that greater Light would reprefent her Body under a falfe Colour.
2. 'Tis not fuch a duskifh leaden Light, as we feein the darker part of her Body, when the is about a Sextile Afpect diftant from the Sun; for then why does fheappear red in the Eclipfes, fince meer fhade cannot caufe fuch Variety? for 'ris the Nature of darknefs by its Oppofition; rather to make things appearof a more White and clear Brightnefs than they are in themfelves, Or if it be the fhade, yet thofe parts of the Moon are then in the thade of her Body, and therefore in Reafon fhould have the like Rednefs. Since then neither of thefe Lights are hers, it followes

Somn.Scip. t that the hath none of her own. Nor is l.r.c.2o. this a fingular Opinion, but it hath had Lect.antiq. many Learned Parrons; fuch as Macrol.1.c.15. bius, who being for this quoted of Rbodiginus, he calls himvir recondit: $\int$ lima fcicn:ice,

 the

58 That the Moon may be'a World.
the thicker Vapours. Thus we fee com monly the Sun being in the Horizon, and the Reflexion growing weak, how his Beams make the Waters appear very Red.

The Moabites in Feborams time, when they Rofe Early in the Morning, and beheld the Waters afay off, miftoak them for 2. Quuff. Blood. Et caufa bujus eft quia radius folaris in boc cap. in Autrora contrabit guondam rubedinem, propter vapores cambuffos manentes circa Supprfciem terra, per quos radii trasfennt, G- ideo cum repercutiantur in aqua ad oullos noffos, trabunt fecum eundem rubirem, 6お faciunt apparere locum aquarum, in quo eft reperculfio, effe rubrum, faith Toffatus. The Reafon is, becaure of his Rayes, which being in the lower Vapours, thofe do convay an Imperfect mixed Light upon the Waters. Thus the Moon being in the Earths fhadow, and the Sun Beams which are round about it, not being able to come Directly unto her Body, yet fome fecond Rayes there are, which paffing through the fhadow, make her appear in that Ruddy colour: So that the muft appear Brighteft when fhe is Eclipfed, being in her Apoge or greateft Diftance from us, becaufe then the cone of the Earths fhadow is lefs, and the Refraction is made through a narrower Medium. So on the contrary, fhe muft be Reprefented under a more Dark and Obfure form when fhe is Eclipfed, being in her Perige or neareft to the Earth,becaufe

That the Moon may be a World.
then fhe is Involved in a greater fhadow, or bigger part of the cone, and fo the refraction paffing through a greater Medium, the Light mult needs be Weaker which doth proceed fromit. If you ask now, what the Reafon may be of that Light which we Difcern in the Darker part of the New Moon? I anfwer, 'tis Reflected from our Earth, which returns as great a Brightnefs to thar Plannet, as it receives ifrom it. This 1 hhall have occafion to Prove aferward.
I have now done with thefe Propofitions which were fet down to clear the paflage, and confirm the Suppofitions implied in the Opinion; 1 hhall in the next place Proceed to a more direct Treating of the chief matter in Hand.

PROP.
-

## PR OP. VI.

That there is aWorld in the Moon, bath been the direct Opinion of many Ancient with Some Modern Mathematicians, and may Probably be Deduced from the Tenents of others.

SInce this Opinion may be fufpected of Singularity, I thall therefore firft confirm it by fufficient Authority of divers Authors, both Ancient and Modern, that fo I may the better clear it from the Prejudice either of an Upitart Fancie, or an obfolete Errour. This is by fome Attributed to Orpheus, one of the moft Ancient Greek Poets. Who fpeaking of the

Scip. lib.I:

That the Moon mady be a World.
Commanded by the Obacle to erect a Statute to the wifeft Gracian, the Sefiate determined Pytbagoras to be meant; preferring him in their Juedgments before the Divine Socrates, whom their Gods pronoinc'd the Wifet. Some think him a Ferv by Birth; but molt agree that he was much Converant amongit the Eearneder fort and Preifts of that Nation; by whom he was informed of many Secrets, and (perhaps) this Opinion which lie vented aftertvards in Greece, where he was much oppofed by.Ariftotle in fome worded Difputations, but never confuted by any folid Reafon:

To this Opinion of Pytbagoras did Plato alfoalfent, when he confidered that there was the like Ecliple made by the Earth; and tlis; that it had no Light of its own, that it was 'o full of foots: And therefore' we may often redd in him, and his followers, of an atberea terta, and lunares populi; An Frhereal Earth, and Inhabiter's in the Moon; but afterwards this'was mixed with many ridiculbuts Fancies: For fome of them confidering the Myiteries implied in the Number 3, concluded that there muft necelfarily be a Trinity of Worlds, whereof the firit is this of ours; the fecondin the Moon, whofe Element of Water is reprefented by the Spear of Mercitry, thie Air by Vestus, and tlie Fite by the Sin. And that the whole Univerfe might the better end in Earthasit began; they have contri-

## That the Moon may be a World.

ved it, that Mars thall be a Spliear of the Fire, Fupiter of Air, Saturn of Water ; and above all thefe, the Elyfian Fields, Spacious and Pleafant Places appointed for the Habitation of thofe uriforted Souls, that either never were imprifoned in, or elfe now have freed themielves from any Com- Exercit. merfe with the Body. Soaliger, peaking of 62. this Platonick Fancy, que in tres trientes mundum quafi aljem divifit, thinks 'tis Confuration enough, to fay, 'tis Plato's. However, for the firt part of this Aflertion, it was Aliented unto by many others, and by Reafon of the Groflinefs and inequality of this Plannet, 'twas frequently called guafiterra calefits, as beingEfteemed De facie the Sediment and more Imperfect part of Linn. thofe purer Bodies; you may fee this Proved by Plutarch, in that Delightful work which he Properly made for the ryfit.ad Confirmation of this Particular. With difpp.Plat. him.agreed Alcinous and Plotinus, later dig......c.4: Writers.

Thus Lucian alfo in his Difcourfe of a journey to the Moon, where though he does Speak many things out of Mirth and in a jefting manner: yet in the Begining of it he does Intimate that it did contain fome ferious Truths concerning the real Frame of the Univerfe.

The Cardinal Cufinus and Fornandus Cufa de Brunus, held a particular World in every doct.ign. 12 Star, and therefore one of them De. cap.12. finingour Earth; he fays, it is fella qus-

64 That the Moon may be a World: dam trobilis, qua lunam o calorem o influentiam babet aliam; ©o diverfam:ab ommibus aliis fellis; ". A Noble Star " having a diftinct Light, Heat, and " Infuence from all the reft. Unto this Nichol. Hill, a Country Man Pbilf. of ours, was Enclined, when he gaid Epiciris. Aftrea terre natura probabilis eff: "That Prar. 434+ "'tis Probable the Earth hath a Starry ‘Nature.

But the Opinion which I have here de-
a InTheflEus. b Diffitatiocam Nowe.
c Nuncius Sydereus. Scmat. Aftr.

Deflerwons.!ïnc! C.5. livered, was more directly Proved by (a) Maflin, (b) Keplar; and (c). Galileus, each of them late Writers, and famous Men for their Singular skillin Aftronomy. Keplar calls this Wonld by the Name of Levania from the Hebrew Word לכנה which fignifies the Moon ${ }_{2}$ and our Earth by the name of Volva ì volvendo, becaure it does by Reafon of its Diurnal Revolution appear unto them confantly to turn Round, and therefore he ftiles thofe who. Live in that Heniifphere which is towards us, by the title of Subvolvani, becaufe they enjoy the fight of this Earth ; and the others Priviolvani, quia funt privati conJpectu volve, becaule they are Deprived of this Yriviledg. But Fulius Cafar, whom I have above Quoted, fpeaking of their Teftimony whom I Cite for this .Opinion, viz. Keplar and Galilaus, Affirms that to his Knowledg they did but jeft in thofe: things which they Write Concerning this, and as for any fulch world, he Affuredly.

That the Mhoon may be a World.
knowsithey never fo much as dreami of it. But I had rather believe their own Woids, than his pretended knowledg.
'Tis true indeed, in fome things they do but trifle, but for the main Scope of thofe Difcourfes, 'ris as manifeft they ferioully meaint it, as any inditterent Reader may eafly difcern; As for Galilèus, 'tis Evident that he did fet down hisown Judgment and Opinion in thefe things; otherwife, fure Campasella (a Man as well acquainted with his Opinion, and perhaps hisPerfon,as Cafar was ) would never have writ an Apology for him. And befides, 'tis very likely if it had been bur a Jeft, Galilaus would never have fuffered fo much for it, as Report faith, afterwards he did.

And as for Keplar, I will only refer the Reader to his own words as they are fer down in the Preface to the Fourth Book. of his Epitome, where his purpofe is to make an Apology for the ftrangenefs of thofe Truths that he was there to deliver, amongft which, there are divers things to this purpofe concerning the Nature of the Moon. He profeliesthat he did not publifh them, either out of aHumour of Contradiction, or a defire of Vain-glory, or in a Jefting way, to make himeelf, or orhers merry, but after a confiderateand folemn manner, for the difcovery of the Truth.
Now as for the knowledg which Cafar pretends to she contrary, you may guetis Whatit was by his itrange confidence in other sap. 7.

## That the Moon may be a World.

Affertions, and his boldnefs in them may well Derogare from bis Credit in this. For feaking of Prolome's Hypotbefsis, he pronounces this Verdict, Impofibible'get excentricorum © epicyclorumi ipfofitio, pec aliquis off ex Matbematicis adeo fulttss gui veram ikam exjfimet. "The. pofrion of Excerm "tricks and Epicycles isaltogecher imporitible, " nor is there any Mathemacician fuch a "Fool as to think it true. I fhould guef he could not have knowledg enough to maintain any other Hypotbefa, who was to Ignorant in Mathematicks, as to deny, that any good Author beld this. For I would fain know, whether there were never any that thought the Heavens to be Solid Bodies, and that there were fuch kinds of Motion, as is by thofefefined Orbs fupplied; if $\mathfrak{f o}$, Cajar la Galla was much mitaken I think his Alfertionsare equally true, that Gallilaus and Keplar did not holdthis, and thar there were none which ever held that other. Thus much for the Teftimony $\alpha$ thofe who were directly of this Opi nion.
Bur, in my following Difcourfe, I fhall moft infift on the Obfervation of Galilew, the Inventor of that Famous Perfeetive whereby we may difeern the Heavens hard by us ; whereby thofe things which othen have formerly gueft at, are maniferted to the Eye; and plainly difoovered beyond ex. ception or doubt; of which admirable in vention, thefe latter Ages of the Wort
may juflly Boaft, and for this, expect to be Celebrated by Pofterity. 'Tis related of Eudoxus, thar he wifhed himfelf Burne with Pbsetton, fo he might ftand over the Sun to cointemplate irs Nature ; had he Lived in thefe Days, he might have enjoyed bis wifh at an eafier Rate, and Scaling the Heavens by this glafs, might plainly have difcerned what he fo much defired. Keplar confider. ing thofe frange difcoveries which this Perrpective had made, could nor choofe but Cry our ina abtromthe and Rapture of Admiration, $\mathbf{O}$ multi)cium ef gurvis /ceptro pretiofus per/picillums : an qui te dextrì tenet, ille De macula non donsinus conffituatur operum Dei! And in fole e obTobanmes Eabriciss, an Elegant Writer, fieak. fer. ing of the fame glafs, and for this Invention, preferring our Age before thofe former times of greater lgnorance, fays thus; $A$ deo fumus fuperiores veteribus, uif quam illi carminis magici pronunciatu demifam repre. Sentajle putantur, nos nontantums innocmter demittamus, fed etiam familiari guodam intwitw cjus quafi conditicnem intueamur. "So " much are we above the Ancients, that
"whereas they were fain by their Magical

That the Moon may be a World.
Tefimony of an Enemy, and fuctra witnefs hath always been accounted prevalent: you may fee it in the above named Cefar la Galla, whofe words are there: Depha-
nom.cap.1. ciare, © mortuorem animas ab inferis revocare fapiens finxit antiquitas. Galilaum verò novum Fovis interpretem. Telefopio caduce inftrutum Sydera aperire, , vetetum PbiloSopborum manes ad fuperos revocare folers noftra etàs videt ${ }^{\circ}$ admiratur. "Wife An. "tiquity Fabled Mercrury carrying a Rod in " his Hand, to relate News from Hearen, " and call back the Souls of the Dead; but
" it hath been the Happinefs of our induf"trious Age to fee and admire Galilaus, the
"New Embafiadour of the Gods, fiunifhed
" with his Perfpective to unfold the Nature " of the Stars, and awaken the Ghofts of "the Ancient Philofophers. So worthily and highly did thefe Men efteem of this excellent Invention.
Now, if you would know what might be done by this glafs, in the fight of fuch thing as were nearer atHand, the fame Author will tell your, when he fays, that byit thof
Ibid.c. 6 :3 things which could carce at all be difcert. ed by the Eye, at the diftance of a Mile and a half, might plainly and diftincly be per. ceived for 16 Italiari Miles, and that asthey were really in themfelves, withour ant Tranfofition or fallifying at all. So tha what the Ancient Poets were fain to put in a Fable, our more happy Age hath fourd
out ina Truth, and we may difcern as far with thefe Eyes which Galileus hath befowed upon us, as Lynceus could with thofe which the Poets atrributed unto him. But if you yet doubs, whether all thefe Ob fervations weretrue, the fame Author may confirm you, when he cays they were Thewed, Non uni aut alteri, fed quamplurimis, ata. . seque gregariis bominibus, Sed precipuis atque dijciplinis omnibus, necron Matbematicicis ${ }^{\text {© }}$ Opticis praceptis optime inftructis Fedulì ac dillgenti inffectione. "Not to one or two, but "to very many, and thofe not ordinary "Men, but to thofe who were well vers'd " in Mathematicks and Opticks, and that " not with a meerglance, but with a Sedu" lous and diligent Infpection. And leaft any fcruple might remain unanfwered, or you might think the Men whobeheld all this, though they might be skilful, yet they came with Credulous Minds, and 'fo were more eafie to be deluded: He adds, that it was Thewed, Vriris qui ad experimenta becc cos-'cup. 5: tradicendi animo acceferisus. "To fuch as " were come with a grear deal of Prejudice, " and an intent of Contradiction. Thus you may fee the certainty of thofe Experiments which were taken by this glafs. I have fooken the more concerningit, becaule I fhall borrow many things in my Farther Difcourfe, from thofe Difcoveries which were made by it.
I have now Cited fuch Authors both Angient and Modern, who have directly
F3 main-

That the Moor may be a World. maintained the fame Opinion. I told you likewife in the Fropofition, that it might probably be deduced from the Tenents of

See the Second Book. 1. Prop.

## Apologia

 pro Gallilieg. others: fuch were 'Ariftrecbus, Pbilolens, and Copernicus, with many other later Writers, who affented to their Hypothefis; fo 'foach. Rbelicas, David Origanks Lansbergius, Guil. Gilbert, and (if I may beleive Campanella ) İnnumeri alii Angli ó Galli; Very many others, both Englifh and French, all who affirmed our Earth to be one of the Plannets, and the Sun to be the Center of all, about which the Heavenly Bodies did move. And how horrid foever this may feem at the firft,' yer is it likely enough to be true, nor is there any. Maxime or Obfervation in Opticks, (faith Pena) that can Difprove it.Now if our Earth were one of the Plannets, ( as it is according to them) then why may not another of the Plannets be an Earth.

Thus have I thewed you the Truth of this Propofition. Before I proceed farther, 'tis requifite that I enform the Reader, what Method I fhall follow in the proving of this chief Alfertion, that there is a World in the Moon.

The Order by which I thall be guided, will be, that which Ariftotle ufes in his Book, De mindo, (if that Book were his.)

Firt, aei wis es aini of thofe chief parts which are in it; not the Elemen-

That the Moon: may be aWorld.
tary and 压thereal, ( as he doth there) fince this doth not belong to the prefent Oquettion, but of the Sea and Land, Orc. Secondly, $\pi \rho^{\ell}$ aivin actüv, of thofe things which are Extrinfecal to it, as the Seafons, Meteors, and Inhabitants.

## PROP. VII.

That thofe Spots and brighter Parts, which by our Sight may be difitinguiffed in the Moon, do Bew the Difference betwixt the Sea and Land, in that other World.

FOR the clear proof of this Propofition, I fhall firft reckon up and refiute the Opinions of others; concerning the matter and form of thofe Spots, and then fhew the greater probability of this prefent Affertion, and how agreeable it is to that Truth; which is molt commonly received; As for the Opinions of others, concerning thefe, they have been very many; I will only reckon up thofe which are Common and Remarkable.

Some there are that think thofe Spots do not arife from any deformity of the parts; but: a deceit of the Eye, which cannot at F 4 fiuch that Plannet; but thefe do but only fay it; and fhew not any reafon for the proof of their Opinion: Others think, that there are

So Bede in l.deMund. conftit. fome Bodies betwixt the Sun and Moon, which keeping off the Light in fome parts, do by their thadow produce thefe Spots which we there difcern.

Others would have them to be the Figure of the Seas or Mpuntains, here Below: Reprefented there as in a LookingGlafs. But none of thofe Fancies can be True, becaule the Spots are fillthe fame, and not Varied according to the Difference

## Dcfultil.

 of Places; and befides, Cardonthinks it is veyed fo far, as there to be Reprefented funto us, at-fuch a Diftance. . But "tis Commonly related of Pytbagoras, that he by Writing what he plealed in a Glass, by the Reflexion of the fameSpecies, would make thpfe Letters to appear in the Circle of the Moon, where they fhould be Legible by a ny other, who might at that a Occules. timé be fome Miles diftant from him (a). Poutof. L. 1. Agrippa affirms this to be Poffible, and sap. 6. the way of performing it not unknown to himfelf, with come others in his time. It may be, that Bifhop Godwine "did by the like means Perform thofe ftrange Conclufions, which he profeffes in his Nuncius inanimatys, where he Pretends, that he can Inform his Friends of what he pleafes, though they be an Hundred Miles diftentr,That the Moon may be a World.
diftant, forte etiam, vel milliare millefimum, (they are his own Words) and perhaps; a Thoufand, and all this in a Little Space, Quicker than the Sun can Move.

Now, what conveyance there fhould be, for fo Speedy a Paffage, 1 cannot Conceive, unlefs it be Carried with the Light, than which we know not any thing Quicker ; But of this only by the way; however, whether thofe Images can be Reprefented fo or not, yet certain it is, thofe Spots are not fuch Reprefentations. Some think, that when God had at firft Created too much Earth, to make a perfect Globe, not knowing well where to Beftow the reft, he Placed it in the Moon, which ever fince hath fo Darkned it in fome Parts; but the Impiety of this is fiefficient Confuration, fince it fo much Detracts from the Divine Power and Wifdom.

The (a) Stoicks held that Plannet to be mixed by Fire and Air, and in their Opinion, the Variety of its Compofition cauled her Spots: being not afhamed to ftile the rame Body a Goddefs, calling it Diana, Minerva, \&c. and yet Affirm it be an Impure Mixture of Flame, and Smoke, and Fuliginus Air.

But this Plannet cannot confint of Fire (faith Plutarch) becaufe their is not any Fewel to Maintain it. $\because$ And the Poets have sherefore fained Vullcatt to be Lame, be-
caufe
caufe he can nomore Subfift without Wood or other Fewell, than a Lame Man withouta Staff.

Anaxagoras thought all the Stars to be of an Earthly Nature, Mixed with fome Fire ; and as for the Sun, he Affermed it to be nothing elfe but a Fiery Stone; for which latter Opinion, the Atbeniaws Sentenc'd him to Death, thofe Zealous Idolaters counting it a great Blafphemy to withftanding, they were fo fenllefs in their Adoration of Idols, as to make a Stone their God. This Anaxagoras Affirmed the Moon to be more Terrefrial than the other Plannets, but of a greater Purity than any thing here Below, and the Spots, he thought, were nothing elfe, but fome Cloudy parts, Intermingled with the Light which belonged to that Plannet; but I have above Deftroyed the Suppofficion on
Nat. Hift. whicl: this fancy is Grounded. Pling.thinks l.2...9. they Arife from fome Droflie ftulff, Mixed with that Moyfure which the Moon Attracts unto her felf; but he was of their Opinion, who thought the Stars were Nourifhed by fome Earthly Vapours, which you may commonly fee Refuted in the Commentators on the Books de Calo.

Vitellio \& Keinoldus, Affirm the Spotsto
opt.lib.9. comment. in Pirb. iag. 164 . be the Thicker parts of the Moon, into which the Sun cannot Infure much Light; and this ( fay they ) is the Reafon why in

## That the Moon may be a World.

the Suns Eclipfes, the Spots. and Brighter Parts, are fill in fome meafure Diltinguifh: ed, becaufe the Sun Beams are not able fo well to Penetrate through thofe Thicker, as they may through the Thinner parts of that Plannet. Of this Opinion alfo was Cafar la Galla, whofe Words are theffe, "The Moon doth there appear Cleareft, "where fhe is Tranfpicious, not only "through the Superficies, but the Sub- Exgua "flance aifo, and there fhe feems fpor-parteluna "ted, where her Body is moft Opacous. ${ }^{\text {ef t tranjfic }}$ The ground of this his Allertion; was, be- ${ }^{\text {chan non }}$ Gcaute he thought the Moon did receive and cumpurum beftow her Light by Illumination only; and fiperfficiem not at all by reflexion; but this, together fece ditiam with the fuppofed Penerration of the Sun- fecmandum Beams, and the Perficuity of the Moons ambeatemis Body; I have above Antiwered and Re- clarate ex futed.
gus aitem
The more Common and general Opini. Farte opacia
 of the Moon, which are lefs able to reflect detur. De the Beams that they receive from the Sun, Phrnom. and this is mof agreeableto reafon; for if cap:11. the Stars are therefore brighteff, becaule Allert they are Thicker, and more Solid than their mag. de Orbs, then it will follow, that thofe parts \&.4. Art. of the Moon which have lefs Light, have 21. alfo lefs Thicknefs. It was the Providence Collog. Con. of Nature (fay fome) that fo contrived that Plannet to have thefe Spors within it; for fince that is nearef to thofe lower Bodies whichare fo full of deformity, 'tis re-qui-
quifite that it fhould in fome meafure agree with them, and as in this Inferiour World, the higher Bodies are the moft compleat, fo alfo in the Heavens, Perfection is afcended unto by degrees, and the Moon being the loweft, mult be the leaft pure, and Dream, concerning the Ladder, doth in an Allegory fhew, how that in the Fabrick of the World, all things grow perfecter, as they grow bigher, and this is the reafon ( faith he) why the Moon doth not confift of any pure fimple matter, but is mixed with Air, which fhews fo darkly within her Body.
But this cannot be a Sufficient reafon; for though it were true, that Nature did frame every thing perfecter, as it was higher, yet is it as true, that Nature framesevery thing fully perfect for that Office to which the intends it. Now, had the intended the Moon meerly to reflect the SunBeams, and give Light, the Spots then had not fo much argued her Providence, as her unskilfulnefs and overfight, as if in the haft of her work, the could not tell how Scalig. ex- to make that Body exactly fit, for that arit. 62. Office, to which the intended it.
'Tis likely then, that fhe had fome other end which moved her to produce this variety, and this in all probability was her intent to make it a fit Body for Habitation, with the fame Conveniences of Sea and Land; as this Inferiour World doth partake

## That the Moon may be a World.

of. For fince the Moon is fuch a Vaft, fuch a Solid and Opacous Body, like our Earth (as was above proved) why may it not be probable, that thofe Thinner and Thicker parts appearing in her, do thew the difference betwixt the Sea and Land in that other World? and Gallileus doubts not, but that if our Earth were viflible at the fame diftance, there would be the like ap. pearance of it.

If we confider the Moon as another Habitable Earth, then the appearances of it will be altogether exact, and beautiful, and may argue unto that; it isfully accomplifhed for all thofe ends to which Providence did appoint it. But confider it barely as a Star or Light, and then there will appear in it much Imperfection and Deformity, as being of an Impure Dark Subftance, and fo unfit for the Office of that Nature.

As for the Form of thofe Spots, fome of the Vulgar think, they reprefent a Man, and the Poets guefs, 'tis the Boy Endymion, whofe Company fhe Loves fo well, that the carries him with her; others will have it only to be the Face of a Man, as the Moon is ufually pictured ; but Albertus thinks rather, that it reprefents a Lyon, with his Tail towards the Eaft, and hisHead the Weft, and * fome others have thought it to be very much likea Fox, and certain*uffoius Nicremb. ly, 'tis as much like a Lyon, as that in Hijf. Nat. the Zodinkr,or as Urfa major is like a Bear.

I fhould guefo, that it reprefents one of thee, as well as anotber, and any thing elfe, as well as any of thefe, fince 'tis but a ftrong Imagination, which Fancies fuch Ima, ges, as School Boys ufually do, in the marks of a Wall, whereas there is not any fuch Similitude in the Spots themfelves, which rather like our Sea, in refpett of the Land, appears under a Rugged and Confufed Fi gure, and doth not reprefent any diftinct Image, fo that both in refpect of the matter, and the Form, it may be probable enough, that thofe Spots and brighter parts, may thew the diftinction betwixt the Sea and Land, in that other World.

## PROP. VIII.

The Spots reprefent the Sea, and the brighter Parts the Land.

WHen I firt compared the Nature of our Earth and Water, with thofe appearances in the Moon; I concluded contrary tothe Propofition, that the brighter Parts reprefented the Water, and the Spots the Land; of this Opinion likewife was Keplar at the firft. But my fecond Thoughts, and the reading of others, have Opt: Affro. now convinced me (as after he was ) of c.6.num. 9. the Truth of that Propofition which I have Differt. now fet down. Before I come to the Con- ${ }_{G}{ }^{\text {cum }}$ firmation of it, I fhall mention thofe Scruples, which atfirft made me doubt the Truth of this Opinion.

1. It may be Objected, ris . Probable, if there be.any fuch Sea and Land as olus, thatir bears. fome Proportion and Similitude with ours, but now this Propofition takes away all Likenefs betwixt them. For whereas the Superficies of our Earth is but the Third part of the whole Surface in the Globe, Two Parts being Exercij: overfpread with the Water ( as Scaliger 39. Ob.

8o Tbat the Moon may be a Wiorld. obrerves) yet here, according to this Opinion, the Sea thould be leststhan the Land, fince there is not fo much of the Befpoted, as there is of the Enlightened parts, wherefore 'tis Probable; that there is no fuch thing at all, or effe; that the Brighter parts are the Sea.
2. The Water; by Reafon of the Smoothnefs of its Superficies, feems better able to Reflect the Sun-Beams than the Earth, which in moft Places is fo full of Ruggedness of Grass and Trees, and fuch like Impediments of Reflexion; and befides, common Experience fhews, that the Water Shines with a greater and more Glorious Brightnefs than the Earth; therefore it fhould feem that the Spots are the Earth, and the Brighter parts the Water. But to the Firft it may be Anfwered.
r. There is ne great Probability in this Confequence, that becaufe 'tis fo with us, therefore in mult be fo with the parts of the Moon, for fince there is fuch a Difference betwixt them in Divers other Refpects, they may not perhaps Agree in this:
DoMeteo- 2 . That Afferfion of Scaliger is not by risl.s.c.i. all Granted for a Truth. Fromurdus, with Art. I.

## That the Moon may be a World.

Air which Ithcompares the Moon, makes the Brigliter parts of that Plannet appear Bigger thán in themfelves they are; as I fhall fhew afterwards:

To the Second it may be Anfwered, that though the Water be of a fmooth Superficies, and fo may feem moft fic to Reverberate the Light, yet becaufe 'ris of a Prefpecuous Nature, therefore the Beams milt Sink into it; and cannot fo Strongly and Clearly be Reflected. Sicut in fpeculo ubi plumbism abrafum fuerit, (faith Cardan) as in Looking-Glalles where part of the Lead is Razed off, and nothing left behind to Reverberate the Image; the Species muft there pa's through and not Back again, foit is where the-Beams Pennetrate and Sink into the Subftance of the Body, there cannot befuch an Immediate and ftrong Reflexion, as when they are Beat back from the Superficies, and therefore the Sun caufes a greater Heat by far upon the Land than upon the Water. Now as for that Experiment where it is faid, that the Waters have a greater Brightnefs than the Land: I Anfwer; 'tis true only there where they Reprefent the Image of the Sun or fome Bright Cloud, and not in other places, Efpecially if we look upon them at any great Diftance, as is very Plain by common Obfervation.

And 'tis certain that from any high Mountain the Land does appear a great
G. deal

That the Mope may be a World. deal Brigbter than any Lake or Rivet.
This may yet be farther Illuftrated by the Similitade of a Looking. Glaffhanging upon a Wall in the Sun-fhine, where, if the Eye be not placed in the juff line of Reflexion from the Glafs, tis Manifeft that the Wall will be of a Brighter Appearance thanthe Glafs. True indeed in the Line of Reflexion, the Light of the Glafs is Equal almoft unto that which comes Immadiately from the Sun it felf; but now this isonly in one Particular place, and fo is not like that Brightenefs which we Difcern in the Moon, becaufe this does Appear Equally in feveral Scituations, like that of the Wall which does feem Bright as well from every place as from any one. And therefore theRuffnefs of the Wall, or (asitis in the Objection) the Raggednefs of our Earth is fo far from being an hinderance of fuch a Reflexionas there is from the Moon, that it is rather Required as a Neceflary Condition unto it. We may conceive that in every rough Body there are, as it were, innumberable Superficies, Difpofed unto an Innumerable Diverfitie of Inclinations. Ita ut nullus

3. 'This Observed that the Secondary Light of the Moon (which afterwards is Proved to Proceed from our Earth) is Sensibly: Brighter unto us, for two or three Days before the Conjunction, in the Morning when The Appears Eafeward, than about the fame time after the Conjunction, when the is gen in the Welt.:-The Reafon of which muff be this, because that part of the Earth which is Oppofite to the Moon in the Elf, has more Land in it than Sea. Whereas on the Contrary, the Moon when .he is in the Weft; is Shined upon by that part of our Earth where there is more Sea than Land, from whence it will follow with good Probability that the Earth does caff a greater Light than the Water: :

4 . Becaufe Observation tells us, that the Spotted parts are always Smooth and E. gaul, having every where an Equality of Light when once they are Enlightened by the Sun, $\therefore$ whereas the Brighter parts are full of rugged Gibbofities and Mountains, having many Shinier in them, as I fall thew moreat Large afterwards.

That in this Planet there mut be Seas, Campanella Indeavours to prove out of Scripture, Interpreting the Waters above the Firmament Spoken in Genefis, to be Apologia meant of the Sea in this World. For (faith ${ }_{\text {Galileo. }}$ he) 'cis: not likely that thereare any fuck Waters above the Orbs to Moderat that Heat which they receive from their Swift Motion (as rome of the Fathers think.) Nor did Mores mean the Angels which may be called Spiritual Waters, as Origen and Auftis would have it, for both there Vide. Iron. , are Rejected by the General content :chirm. Nor could he mean any Waters in the Confefion. fecond Region, as molt Commentators 1.13 .e. 32. Interpret it, For first, there is nothing but Rib. 2.Retr. Vapours, which though they are after-ciap.6. wards turned into Water, yet while they Remain there, they are only the Matter of that Element, which may as well be Fire, or Earth; or Air. Secondly, Thole Vapours are not above the Expanfum, but in it. So that he thinks there is no other way to falve all, but by making the Planners feveral Worlds with Sea and Land, with fuch Rivers and Springs as we have here below: Efpecially fince Esdras Speaks 2 Efdr.4.7 of the Springs above the Firmament. But I cannot agree with him in this, nor do I think that any fuch thing can be Proved out of Scripture.
Before Proceed to the next Pofition, I Shall first Anfwer forme Doubts which might be made againit the Generality of

G 3 - , this
this Tiruth, whereky it may feem Impofffibe that there thouild be either 'Tea of Land in the Moon; for firice flie moves fo swifliy as Aftronomers © Obferve, why thien does there nothing Falt from her, or why doth the not Shake fomething out by the celerity of her Revolution; 1 Anfwer, you muff know that the Inclination of every heavy Body to its Proper Center, doth Sufficiently tie it unta its Place; fo that Suppofe any thing were Separated; yet muift it Neceflarily remurn again: 'And there is no more Danger of their Falling into our World, than there is Fear of our Ealling into the Moon.

But yet there are many Fabulous Relations of fuch things as have Propped thence. There is a Tale of the Nemean Lyon that Hercules Slew, which firft Vidc Gult: Ruifhing among the Heards out of his unNiblirienf. known Den in the Mountain of Citherm de rebus. in Bxotia, the Credulous People thonght Angicic: liv. I . he was fent from their Goddef the Moon. And if a Whirl-Wind did chance to Snatch any thing up, and afrerwards Rain it Down again, the Ignorant Multitnde wereapt to beleive that it Dropt From Heayen. Thus Avicenna relates the Story of a Calf which'fell down in a Storm, thebeholders thinking it a Moon-Calf, and that it fell thence. -So Cardan Travelling upon the Apeninine Mountains, a fudden Blaft took off tis Hat, which if it had been carryed

That the Moon may be a World.
ryed far; he thinks the peafants, who had perceived it to Fall, would have Sworn it had Rained Hats. After fome fuch Man. ner, many of our Prodigies come to Paî, and the People are willing to beleive any thing, which they may Relate to others as a very Strange and Wonderfiil Event. I doubt not but the Trojan Paileditum, the Roman Minerva, and our Ladies Church at Loretto, with many facred Reliques preferved by the Tapift might Drop from the- Moon as well as any of thefe.

But it may be again Objected, fuppore there were a Bullet Shot yp in that World, ubould not the Moon run away from it before it could fall down, fince the Motion of her Body (being every Day frimd our Earth ) is far Swifter than the other, and fo the butter munt be left: behind, and at Length fall down to us? To this I Anfwer.

1. If a Bullet could be Shot fo far tillit came to the Circumference of thofe things which belong to our Center, then ir would fall down to us.
2. Though there were fome Heavy Body a great Height in that Air, yet swould the Motion of that Magnetical Globe to whichit did belong by an attraOlive Vertue fill hold it within its Conwenient diftance, whether their Earth Moved or ftood Stil, yet would the fame Violence caft a Body fromit Equally

## That the Moon may be a World.

far. That 1 may the plainer Exprefs my meaning, I will fer down this Diagramme.

Suppofe this Earth were A, which was to Move in the Circle C. D. and let the Bullet be Suppofed at B. within its Proper Verge; 1 fay, whether this Earth-did Stand ftill or Move Swiffly towards $D$, yet the Bullet would ftill keep at the fame. Diftance by reafon of that Magnetick: Vertue of the Center (if I may fo Speak). whereby all things within its Sphear are Attracted with it. So that the Violence to the Bullet, being nothing elie but that where:

That the Moon may be a World. whereby 't's Removed from its Center, therefore an equal Violence can Carry a Body from its Proper place; but at an equal Diftance, , whether or no this Earth where its Center is, does Stand fill or Move.

The Impartial Reader may find fufficient Satisfaction for this and fuch other Arguments as may be urged againft the Motion of that Earth, in the Writings of Copersicus and his followers, unto whom, for Brevities fake, ! will Refer them.

## That the Hfoom why be uWarlad.

## That the Moon may be a World:

 Gouts, anid the Rocks for the Conites Thie v.18. Kingly Prophet had likewife Learned'the Safety of thefe by his oxm Experience, when the alfo was Fainizo make a Mount tain his Refuge from the Fury of his Mafter Saill, who Perfecuted him in the WidernefsTrue indeed, fuch places asthefe keep their Neighbouirs poor, as being molt Barren, but yet they preferve them Yafe, as being moft ftrong; witners our unconquered Wales and Scotland, whofe greateft Protection hath been the Natural Strength of their Coontry, fo Fortified with Mountains, that thefe have always been unto them, fure Retreits from the Viblence and Oppreflion of othets: Whierefore a good Author doth Rightly call them Natures Bul-warks, caft up at God Almightites own charges, the Scorns and Curbs of Vittorious Armies; which made the Barbaríitis in Cuitrisis fo confident of their own fafety, whenithiey were once retired to an inaccerf fible Mountain, that when Alexmiders Le. gate' had brought them to a Parley; anid perfwading to yeild, told them of tiis Marfers Victories, whiar Seas and Widdernefites he had paffied ; they replied, that atl that might be, but could Alexanner Fly toot Over the Seasthe might have Stips, "atid over the Land Horfes, but he minf have Wings tefore he couth get tip thither. 'Such fafert did thofe Barbarous Nations conceive

That the Moon may be a World: ceive in the Mountains whereunto they were retired. Certainly then fuch ufful parts were not the Effect of Mans Sin, or produced by the Worids Cure, the Flood, but rather at the firf Created by the Goodnefs and Providence of the AImighty.
This Truth is ufually concluded from thefe and the like Arguments.

1. Becaufe the Scripture it felf, in the Defcription of that general Deluge, tells us, it overflowed the higheft Mountains.
2. Becaufe Mojes who writ long after the Flood, does yet give the fame Defcription of Places and Rivers, as they had before ; which could not well have been if this had made fo ftrange an Alteration.
3. ${ }^{\text {'Tis Evident that the Trees did fand }}$ as before. For otherwile Noab could not fo well have concluded, that the Waters were abated, from this reafon, becaufe the Dove broughtan Olive Leaf in her Mouth, when fhe was fent forth the Second time: whereas had the Trees been rooted up, the might have taken it the firft time, from one of them as it was Floating on the Top of the Waters. Now if the Motion of the Water was not fo Violent as to Subvert the Trees, much lefs was it able to caft up fuch vaft heaps as the Mountains.
4. When the Scripture doth fet forth unto th the Power and Immenfity of God by the Variety or Urefulnets of the Creatures which

## That the Moon may be a World.

which he bath made, amongft the reft it doth often mention the Mountains: Pfal: 104. 8. item. 148.9. Ifai. 40. 12. And therefore 'tis probable they were Cteated at the firt. Unto this Imight add, that in other Places Divine Wifdom, in fhewing of Prov.8.25. its own Antiquity, (aith, that he was From Pfal.90.2. the begiming, before tbe Earth or the Mountains were brougbt forth.
5. If we may Truft the Relations of An- 7ofephant. tiquity, there were many Monuments left lib. I.c. 3 undefaced after the Flood.

So that if I intend to prove thac the Moon is fuch a Habitable 'World as this is; 'tis requifite that I fhew it to have the fame Conveniences of Habration as this hath; and here if fome Rabbi or Chymick were to handle the Point, they would firt prove it out of Scripture, from that placein Mofeshis Blefling, where he fpeaks of the Ancient Mountains and lafting Hills, Deut. 33 . ת for having immediately before mentioned thofe Bleffings which thould happen untor fofeph by the Inflience of the Moon, he does prefently Exegetically Irerate themin Bleffing him with the cheif things of the Ancient Mountains and lafting Hills; you may alfo fee the fame expreffion ufed in $\mathcal{F}$ acobs Bleffing of 70 fepb.

But however we may deal pro or con in with Divine Truths; or bring Scripture to Patronize any Fancy of our own, though, per.

You may fee this Trüth fab.pars.3. affented unto by Blaticaruis the Jefuite, dind c.'4. by him confirmed: with divers Reafohy: Keplar hath Obfervedin the Monns Eclipfes, that the Divifion of het inlightned part num. 9. from the fhaded; was made by a crooked unequal Line; of which there cannot be any probable caufe conceived, unlers it did arife from the Ruggednefs of that Plannet; for it canmor at all be producid from, the thade of "any Molntains here upon Earth; becaufe there would be fo. leffened before they cotuld reachio highina Conical fhadow, that they would not be at all fenfible unto us (as might eafily be Demonftrated') nor can it be conceived what reafon of this difference there fhould be in the Sun: - Wherefore thése being no other Body that hathany thing to do in Eclipfes; wemuftneceffarily conclude, that it is caufed by variety of parts in the Moon it felf, and what can thefe be but its Gibbofirities? Now if you fhould ask a reafon why there fhould be fuch a Multitude of theie in that Planner, the fame Keplar fhall jeft you out an Anfiver. Sappofing (faith he) that thofe Inhabitants are bigger thanany of us in the fame proportion', as their days are longer than ours, vix. By Fifeen times it ${ }^{\prime}$

That the Moon may be a World.
may be,for want of Stones to Erect fuch vaft Houles as were requifite for their Bodies, they are fain to Dig Great and Round Hollows in the Earth, where they may both procure Water for their Thirf, and turning about with the fhade, may avoid thofe great Heats which otherwife they would be pend. liable unto, or if you will give Cafar la Galla leave to guefs in the fame manner, he would rather think that thofe Thirfty Nations caft up fo many, and fo great heaps of Earth in digging of their Wine Cellars; but'this ouly by the way.

I thall next produce Eye-witnets of Galilecis, on which I nioft of all depend fort the proof of this Propofition, when he beheld the new Moon through his perfective, it appeazed to him under a Rugged and Spotted Fisure, feeming to have the darker and enlightined parts divided by a Tortuous Line, having fome Parcels of Light at a good diftance from the other; and this difference is fo remarkable, that you may eafily perceive it through one of thofe ordinary Perfpectives, which are commonly fold amongft us; but for your better apprehending of what I deliver, I will fet down the Figure as I findit in Galileus.

Bur when the Moon is got farther off from the Sun, and come to that fulnefs as this Line B D doth reprefent her under, then co thefe partsalfo receive an equal Light, excepting only that difference which doth appear betwixt their Sea and Land. And if you do confider how any Rugged Ecdy would appear,being enlighened, you would eafily conceive that it m. fi necellarily feem under forme fich Gibbois unequal form, as the Moon is here reprefented. Now for the Infallibility of thefe appead rances, I fhall refert! e Reader to that which bath beern latd in $t$. e Sixth Propofition:
Eut Cajar la Galls affirms, that all thefe appearances may confitt with a plain Supericies, if we fuppofe the parts of the Eody to be fome of them Eiaphanzuis; and fome Opacous; and it ynu Obiect; that the Light which is convay'd to anyDiaphianous part in a plain Superticies, nuut be by a continued Line, whereas here there appear many brigliter parts among the Obfcure, at fome di:tance from the relt. To this he antwers, it inay arife from fome Secret: Conveyarces and Channels within her Eody, that do conlit of a more Diaphanols matter, which being covered over with an Opacous Supericies, the light paffing through them, may break out a great way of ; whereas the other parts betwix, thay fill remain Dark: Juit as the River Aretbüa in Sicily, which rans under ground for a great way', and afterwards breaks out againt. But becaufe this is one of the

## 96 <br> That the Moon may be a World:

chiefeft Fancies, whereby be thinkshe hath fully anfwered the Argument of this Opinion; I will therefore fer down his anfwer in his own words, left the Reader might fifpect more in them, than I have exprefled.
(a). 11. Non ef impofibile ceces durfus diapbenió petfpicuic corporis, fed opaci fuperfrice protendi, wfque in diapbanam aliquam ex profund infuperficiem emergentem. partem, per quos ductus lume inlonge pof :modum: interffitio erumpat, drc. But I reply, if the Superficies betwixt thiefe two enlightened parts, remain dark be caufe of its Opacity, then would it always. be dark, and the Suncould not makeit partake of Light, more than it could of Perfpicuiry : But this contraditts all Experience, as you may. fee in Galileus, who affirms, that when the Sun comes nearer to bis Oppofition, then, that which is betwixt them both, is enlightned as well.as either. Nay, this Oppofes hisown Eye-witnefs, for he confefies himelef, that he faw this by the glafs. He had fiid before, that he came to fee thofe frange Sights difcovered by Galibecus his glafs, with an intent of Contradifcion, and you may read that confirmed in the weekneff of this anfwer, which rather bewraysanObfinate, thañ a perfwaded Will; for ocherwife fure he would never have undertook to have deftroyed fuch certain proofs with fo grounders a Fancy.
sytmmondi That Infance of Galileus, would have coiz i. been a better Evafion, had this Author been Acquainted with it; who might thenhave compared the Moon to that which we call Mother of Pearl s. which though it oe

## That the Moon may be'a World.

moft Exactly Polifhed in the Superficies of it; yet will feem unto the Eye as if there were divers Swellings and Rifings in its feveral Parts. But yet, this neither would not well have flifted the Experiment of the Perfpective. For thefe rugged parts do not only appear upon one fide of the Moon, but as the Sun does turn about in Divers Hlaces, fo do they alfo caft their Shadow. When the Moon is in her Increafe, then do they caft their thadows to the Eaft. When fhe is in the Decreafe,and the Sun on the other fide of her, then likewife may we Difcover thefe brighter Parts cafting their fhadowes Weltward. Whereas in the full Moon there arenone of all thefe tobe feen.
But it may be Objected, that 'tis almoft Impoffible, and all together Unlikely, that in the Moon there fhould be any Mountains fo-high, as thofe Obfervations make them. For do but Suppofe, according to the common Principles, that the Moons Diameter unto the Earths, is very neer to the Proportion of 2 to 7 . Suppote withail that the Earths Diameter contains about 7000: Italian Miles, and the Moons 2000. (as is commonly granted.) Now Galilous hath Oberved; that fome parts have been Enlightned, when they were the Twentierh part of the Diameter diftant from the common term of Illumination. From whence, it muft neceflarily follow, that there may be. fome Mountains in the Moon, fo high, that they are Able to caft a fhadow a 100 Miles off. An opinion that founds like a Prodigy or a Fition wherefore 'tis likely that either thofe Appearances are caufed by fomewhat elfe befides Mountains, orelfe thofe are fallible Oblervations, from whence may fol'cow fuch Improbable, Inconceiveable Contcquences. Eut to this I Anfwer:
1: You mult Confider the height of the Mountains is but very little, if you com, pare them to the Length of their thadows. Sir Waley Ravliigb Obferves, that the
Hijfl.I.c. Mount Athos, now culled Lecas, cafts its
7.Set. II. (hadow 300 Furiongs, which is above 37 Milits; and yet that Mount is none of the Higheft. Nay, Solinus (whom I fhould rather beleive in this kind) affirms, that this Nountain gives his thadow quite over

## That the Moon may. be a Whitd.

many others, are much abnve this height. Temariffa in the Canary Illands, is conmonly related to be above 8 Miles Yerperdicular, and about this height (fay fome) is the Mount Perjacaca in Amırica. *Sir Walter Ravyleigh feems to think, that the *Hijf.l...a highet of thefe is near 30 Miles upright : Meter.l. nay, cir forle fpeaking of Cauca'ss in Afa, 1.c.s1. affirms it to be Vifible for 560 Miles , as fome Interpreters find by Comphtation ; from which it will follow, that it was 78 Miles `Perpendicularly high, as you mav see conirmed by 7acobus Mazcnius, and Comparaour of him. in Blancanus the Jefuit. But too divft. this Deviates from the truth, more in Excefs, than the other doth in defest. However, though thefe in the Moonarenot fo Expof. in high as come amongit us; yet certan it is Ice. $M$ th. they are of a great height, and fome of drlstoc. them at theleat four Miles Perpendicular. cum. Plan tone. Seff. 3 c. 5. the Sea, from Macten $n$ to the ifle of $L \mathrm{~cm}$ mos, which is 700 Furlonge, or 84 Nilites, and yetaccreding to the common Reckoning it doth icarce rtach 4 Niles upwards, iṇis. Ke rpendicular height.
2. I affirm, that there are very high: Mountains in the Monn. K.plar and Gat lilaus think, that shey are liggher than ary which are upon our Eerth. Litit I am not of their Opinion in this, becaufel fippofe they go upon a falte crourd, whilit they Conceive, that the highent Mountuin upon the Eath is not above a Nile Ferpendicu'ar.

Wereas 'ris the conmon Opinion, and found true enough liy (biervation, that Olympus, Aithiss Taurusanl. Emus, "ith.

For let BDEF be the Body of the Moon, ABC will be a Ray or Beam of the Sun, which Enlightens a Mountainat $A$, and $B$ is the point of Contingency ; the diftance betwixt $A$ and $B$, muft be fuppofed to be the Twentieth part of the Diameter, which is an $\mathbf{1 0 0}$ Miles, for fo far are fome Enlightened partsfevered from the common term of Illumination. Now the Aggregate of the quadrate from ABa Hundred, and B G a 1000 will be 1010000 ; unto which the Quadrat arifing from A G muft be equal; according to the 47 Propofition in the firft Book of Elements. There fore
fore the whole Line AG is fomewhat more than r.04. and the diftance betwixt HA muft be above 4 . Miles, which was the thing to be Proved.

But it may be again Objected, if there be fuch Rugged parts, and fo high Mountains, why then cannot we Difcern them at this diftance? why doth the Moonappear unto us fo exactly Round, and not rather as a Wheel with Teeth.

I Anfwer, by reafon of too great a diftance ; For if the whole Body appear to our Eye fo little; then thofe parts which bear fo frmall a Proportion to the whole, will not at all be Senfible.

But it may be Replied, if there were any fuch remarkable Hills, why does not the limb of the Moon appear like a Wheel with Teeth, to thofe who look upon it through the great Perfpective, on whofe Witnefs you fo much depend? or what Reafon is there that the Appears as Exactly Round through it, as the doth to the bare Eye? Certainly then, either there is no fuch thing as you Imagin, or elfe the Glafs fails much in this Diffovery.

To this 1 fhall Anfwer out of Galileus.
r. You muft know that there is not meerly one rank of Mountains, about the Edg of the Moon, but Divers Orders, one Mountain behind another, and fo there is fomewhat to hinder thofe Void
102. That the Moon may be a World. (paces which otherwife, Perhaps, migbr appear.

Now, where there be many Hitts, the Ground feems even to a Man that can fee the Tops of all. Thus when the Sea rages, and many vaft Waves are Lifted up, yct all may appear plain enough to one thas ftands at the Shore. So where there are fo many Hills, the Inequality will be lefs Remarkable, if it be Difcerned at a Diitance.
2. Though there be Mountains in that part which appears unro us to be the Limb of the Meron, as well as in any other place, yet the bright Vapours hide there Appearance: for there is an Orb of thick Vaporous Air that doth Immediately compaifs the Body of the Moon, which though it have not fo great Opacity, as toturminate the Sight, yet being once Enlightened by the Sun, it doth Reprefent the Body of the Moon under a greater Form, and hinders our Sight from a yiftinct view of her true Circumference. But of this in the next Chapter.
Somn.Afri: 3. Keplar hath Oberved, that in the Solary nsf.207. Eclipfes, when the Raysmay pdis thorough this vaporous Air, there are fome Gibbolif ties to be difcarned in the Limb of the Monn.

1 have now fufficiently proved, that there are Hills in the Moon, and hence it may feem likely, that there is alfo a world; for fince Providence hath fome fpeciad end in

That the Moon may be a World. all irs works, certainly then thefe Mouns tains were not produced in vain; and what more probable meaning can we eonceive there thould be, than to make that place convenient for Habitation? VideEufeb.

## PROP. X.

That there is an Atmosphara, or an Orb of grofs, Vaporous Air, Immediatley encompafing the Bcidy of the Moon.

$A^{s}$$S$ thas part of our Air which is neareit to the Earth, is of a thicker Subftance chan the other, by reafon'tis always mixed with fome Vapours; which are con. tmually exhaled into it. So is it equally $t=q u i f i t e$, that if there be a World in the Aioon, that the Air about that, thould be a.ik= qualitied with ours. Now, that there is tuch an Orb of grofs Air, was firft of all (for ought I can Read) Obferved by M. $\rho: n$, aftierwards altented unto by Keplar and Galilaks, and fince by Baptifta Cijarus, Sbeizer with others, all of shem confirming Nicrem. it by the fame Arguments which I thall ${ }_{H} / / \mathrm{lt.1.2,c}$. only 16

$\square$
 be a Sphere of grofler Air about the Moon; becaufe 'ris Oblerved, that there are fuch kind of Evaporations which proceed from the Sun it felf. For there are difcovered divers movable Spots, like Clouds, that do encompats his Body : which thofe Authors, who have been moft frequently verfed in thefe kind of Experiments and Studies, do conclude to be nothing elfe but Evaporations from it. The Probability and Truth of which Obfervations may alf be inferred from fome other appearances. As,
I. It hath beeniObferved, that the Sun hath

So. A.D. fometimes for the face of four Days to-
1547.

Apri: 24 to the 28 . gether, appeared as Dull and Ruddy almoft as the Moon in her Ecclipfes; in fo much that the Stars have been feen at Midday. Nay, he hath been conftantly darkned for almoft a whole Year, and never thined, butwitha kind of heavy and duskifh Light, fo that there was fcarce heatenough to Ripen the Fruits., As it was about the time when Cajar was Killed. Which was recorded by fome of the Poets. Thus Virgil, fpeaking of the Sur

Ovid likewife fpeaking of his Death -........-Solis quogue trifisis imago
Lurida. Sollicitis prabebat lumina terris.
------The Suns Jad Image then
Did yeilda lowring light: to Fearful Men:
Now thefe appearances could not arife from any lower Vapour: For then 1. They would not have been fo Univerfal as they were, being feen through all Europe; or elfe 2. That Vapour muft have covered the Stars as well as the Sun, which yet notwithftanding were then plainly Difcerned inthe Day time. You may fee this Argument Illuftrated in another the like cafe. Chap. 12. Hence then it will follow, that this : Fuliginus matter, which did thus oblcure the Sun, muft needs be very near his Body; and if fo, then, what can we more Probably guefs it to be, than Evaporations from it?
2. 'Tis obferved, that in the Suns total Eclipfes, when there is no part of his Body difcernable, yet there does not always follow fo great a Darknefs, as might be Expected from histotal Abrence. Now 'ris probable, that the Reafon is, becaufe thefe thicker Vapours, being Enlightned by his Beams, do convey fome Light unto us,
notwithltandirg the Interpofition of the Moon betuixt his Eody and our Eerth.
3. : This likeuife is by fome guelt to be the Reaton of the Crefu'culi:m, or that Light which we have before the Suns Riling.

Now, if there be firch Evaporations from the Sun, much more then from the Moon, which does confilt of a more Grofs and Impure Subitance. The other Arguments are caken from feveral Obferva. tions in the Mom herfelf, and do more directly tend to the prouf of this Propos fition.
2. TT is Oberyed, that to much of the Monn as is enlighthed, is : always parr of a bigger Circle, than that whith is darker: The frequent Experience of oihers hath proved this, and an eatie Obfervation may quickly confirm it. But now this cannot proceed from any other caufe fo rsobable, as from this Orb of Air; efpcially when we confider how thar tlannet hining uith a borrowed Light, doth not fend forth any fuch Rays as may make ther appearance bigger than her Rody.
. 3. When the Moon being half Enlightened: begins to cover any Star; if the Star be rowards the Obfcurer part, then may it by the Perfpective be difcerned, to be nearer unto che Center of the Moons than the ontward Circumference of the Enlightned part. Blit the Moon being in

That the Moon may be a World.
the Full ; then dors it feem to receive thefe Stars, within its Limb.
-4 Though the Moon do fometimes appear the firt Day of her Change, when fo muich as appears Enlightened, cannot be above the 80 part of her Diameter, yet then will the Horns feem ar lealt to be of a Fingers breadth in Extenion. Which could not be, unlefs the Airabous it were Illuminated,
5. ' His Obferved, in the Solary Eclipfes, that there is fome tirnes a great Irepidation about the Body of the Moon, from which we may likewife argue an Atmo-Sphæra, fince we cannot well conceive what fo probable a caule there fhould be of fuch an appearance as this, Guod radii Solares a vaprribus Lunam ambientibus fwerint in terci- Scbeiner: $f$, that the Sun-beams were broken and re- Rof. Urf. 1. fracted by the Vapours that encompalied ${ }^{\text {4. pars } 27} 2$ the Moon.
6. I may add the like Argument raken from another Obfervation, which will be eafily tried and granted. When the Sun is Eslipfed, we difeern the Moon as the is inher own natural Eignefs; but then the appears fomewhac lefs than when the is in the Full, though the be inthe fame place of her fuppofed Excentrick and Epicycle; and therfore Tycbo hath Calculated a Table for the Diameter of the divers New Moons. But now there is no Reafon to Probable, to Salve this appearance, as ro place an Orb of thicker Air, near the

Body of that Plannet, which may be Enlighrened by the Reflected Beams; and through which the direct Ryas may eafily Penerrate.

Bur fome may Object, that this will not conffit with that which was before delivered, where I faid, that the thinneft parts had leaft Light.

If this were true, how comes it to pafs then, that this Air fhould be as Light as any of the others parts, when as ?tis the Thinneft of all?
1 Anfwer, if the Light be received by Reflection only, then the thickeft Body hath moft, becaufe it is beft able to beat back the Rays; but if the Light be received by lilumination (efpecially if there be an Opacous Body behind, which may double the Beams by Reflexion) as it is here, then I deny not but a thin Body may Retain much Light, and perhaps, fome of thofe Appearances which we take for Fiery Comets, are nothing elfe but a bright Cloud enlightened; So that Probableit is; there may be fuch Air-with: out the Moon; and hence it comes to pafs, that the greater Spots are only Vifible towards her Middle parts; and none near: the Circumference; not, but that there are fome, as well in thofe parts, as elfewhere, but they are not there Perceivable, by reafon of thofe brighter Vapours which bide them.
110. That the Moon may be a World.
is one Hemilphere that hath always Heat and Light, and the other that hath Darknefs and Cold. True indeed, their Days and Years are ahways of one and the fame Length (unlefs we make one of their the Stars do Arife after the fame Order.) But tis fo with us alfo under the Poles, and therefore that great difference is not Sufficient to make it altogether unlike ours ; nor can we expect that every thing there fhould be in the fame manner as it is here below, as if Nature had no way but one to bring about her Purpofe. We have no Reafon then to think it neceffary that both thefe Worlds thould be altogether alike, but it may foffice if they be Correfpondent in fomething only. However, it may be quertioned whether it doth not seem to be againft the Wifdom of Providence, to make the Night of to great a Length, when they have fuch a long time unfit for Work? I Anfwer, No ; fince tis fo, and more withus alfo under the Poles; and befides, the general Length of their Night is fome what abated in the. Bignefs of their Moon which is our Earth. For this Returnsasgreata Light unto that Plannet, as it Receives from it. But for the better Proof of this, I thall firft free the Way from fuch Opinions as might otherwife hinder the fpeed of a clearer Progrefs.
Plut.de.
fic. lintir.

World in the Moon, doth directly Contradict this Propofition, Affirming, that thofe who Live there, may difeern our World, as the Dreggs and Sediment of all other Creatures, appeaing to them through Clouds and Foggy mifts, and that altogether Devoid of Light, being Bafe and unmoveable; fo that they might well imagine the Dark place of Damnationto be here Situate; and that they only were the Inhabiters of the World, as being in the mid!t betwixt Heaven and Hell.

To this I may Anfiver, 'tis Probable that plutarch fpake this Inconfiderately, and without a Reafon, which makes him likewife fall into another Abfurdity, when he fays our Earth would appear Immovable;
yet would it feem to Move, and theirs to itand Still, as the Land doth toa Man in a Ship; according to that of the Poet:
Provebimur portu, terscque abefqus recedumt.
Andl doube not but that the Ingenious Author would eafily have Recanted, if he had been but acquainted with thofe Experiences which Men of latter times have found out, for the Confirmation of this Truth.
2. Unto him affents Macrobiss; whore Words are thefe; Terra accepto.' Solis humise clarefoit tasutummodo, poon relucet. "The Somns.Sip. "Earth is by the Sun Beams made Bright, l. i. c. 19. I 2
"but

112 That the Moon may be a World.
" but not ableto Enlighten any thing fo far. And his Reafon is, becaufe this being of a thick and Grofs Matter, the Light is Terminated in irs Superficies, and cannot Penetrate into the Subftance? whereas the Moon doth therefore feem fo Bright to us, becaufe it receives the Beams within it felf. But the Weaknefs of this Allertion, may be eafily Manifeft by a common Experience; polifhed Steal (whofe Opacity will not give any Admittance to the Raies) reflects a ftronger Heat than Glafs, and fo Confequently a greater Light.
3. 'Tis the general Confent of Philofophers, that the Reflection of the SunBeams from the Earth doth not reach much above half a Mile high, where they Terminate the firft Region, fo that to Affirme they might afcend to the Moon, where to fay, there were but one Region of Air, which Contradicts the proved and received Opinion.

Unto this it may be Anfwered:
That it is indeed the common Confent, that the Reflexion of the Sun-Beams reach only tothe Second Region; but yet fome there are, and thofe too, Philofophers of good Note, who thought otherwife. Thus Ant.lect.1. Plotitius is Cited by Calius, $\sqrt{ }$ concipiat te in 1.c.4 Jublimi quopiam mundi loco, unde oculis fubjiciatur terra moles aguis circumfufa, ó Solis Syderumq; radiis illuftrata, non aliam profecto vifam iri probabile eft, guam qualis modo visathr lunaris globi Species, "If you

## That the Moon may be a World.

"conceive your felf to be in fome fuch high "Place, where you might Difcerne "the whole Globe of the Earth and "Water, when it was Enlightened by the " Sun's Raies,'tis Probable it would then Ap"pear to you in the fame Shape as the "Moon doth now unto us. So Paulus Inepif.all Fof carimus. Terra nibil aliud eft quam altera Sebjff. Luna, vel Stella, talifg; nobis appareret, Fantonnm. fiex convenienti elongatione eminus conspiciretur, in ipfaq; obfervari poffent ecedem a pectuusm varietates, qua in Lunà apparent. The Earth is nothing elfe but another Moon or Star, and would appear fo unto us if ir were beheld at a Convenient Diftarice, with the fame Changes and Varieties as there are in the Moon. Thus alfo Carolus Malapertius, whofe Words are thefe, Terra Prefat.ad bee noftra, $\sqrt{ }$ in luna confituti eflemus, Auftriaciz Splendida prorfus quafi non ignobilis planeta, ydd. "nobis appareret. "If we were placed in "the Moon, and from thence beheld this ${ }^{\text {s }}$ Earth, it would appear unto us very "Bright, like one of the Nobler Plannets. Unto there doth Fromondus affent, when Meteor.l.s he fays, Credo equidem guod $\sqrt{2}$ oculus guif- c.2.Art.2. piam in orbe lunari foret globum terveior ague inftar ingentis fyderis a fole illuftrem confpiceret. "I beleive that this Globe of "Earth and. Water would appear like " fome grear Star to any one, who fhould "Look upon it from the Moon, Now this could not be, nor could it fhine fo Remarkably, . unlers the Beams of Light were Reflected from it. And therefore the fame Fromundus exprefly holds, that the firlt Region of Air is there Terminated, where the Heat caufed by Reflexion begins to Languifh, whereas the Beams themelves do pafs a great way farther. The chief Argument whick doth moft plainly manifeft this Truth, is taken from a common Obfervation which may be eafily Tryed.

If you behold the Moon a little before or after the Conjunction, when the is in a Sextile with the Sun, you may difcern not only the part which is enlightned, but the reft alfo to have in it a kind of a duskifh Light; but if you chufe out fuch a Situation, where fome Houfe or Chimney (being fome 70 or 80 Paces diftant from you ) may hide from your Eye the enlightened Hornes, you may then difcerna greater and more remarkable fhining in thofe parts unto which the Sun-Beams cannot reach; nay there is fo great a Light, that by the help of a good perfective you may difcern its Spots. In fo much that Blancanus the Jefuit fpeaking of it, rays,

## That the Moon may be aWorld.

"got into her Full a little after her " change.
But now this Light is not proper to the Moon; it doth not proceed from the Rays of the Sun which doth penetrate her Body, nor is it caufed by any other of the Plannets and Stars. Therefore it mult neceffarily follow, that it comes from the Earth. The two firft of thefe I have already proved, and as for the laft, it is confidently affirmed by Celius, 2 tuod $\hat{2}$ in difquiftionem evocet quis, an lunari $\int$ gderi liscem tanerent Ant. Left. l.20.e. 5. planete item alii, affereraste' aftruendum son farerare. "lf any thould ask whether the "other Plannets lend any Liglt to the " Moon? I anfwer, they do not. True indeed, the Noble Tycho difcuffing the reafon Proginn.r: of this Light, attributes it to the Plannet Wenus; and lgrant that this may convey fome Light to the Moon; but that it is not the caufe of this whereof we now Difcourfe, is of it felf Sufficiently plain, becaufe Venss is fometimes over the Moon, when as the cannot convey any Light to that part which is turned from her.

It doth not proceed from the fixed Stars ; for then it would retain the fame Light in Eclipfes, whereas the Light at fuch times is more Ruddy and Dull: Then alfo the Light of the Moon would not be greater or lefler, according to its diftance from the Edge of the Earths fhadow, fince it did at all times equally participate this Light of the Stars.

In brief, this is neither proper to the Moon, nor does it proceed from any Penetration of the Sun's Raies, or the fhining of Venus, or the other Plannets, or the fixed Stars. Now becaufe there is no othet Body in the whole Univerfe, fave the Earth, it remains that this Light muft necellarily be cauled by that, which with a Juft Gratitude repaife to the Moon fuch Illumination as it receives from her.

And as Loving Friends, equally Participate of the fame Joy and Grief, fo do thefe Mutually partake of the fame Light from the Sun, and the fame Darknefs from the Eclipfes, being alfo feverally helped by ore another in their greateft wants': For when the Moon is in Conjnuction with the Sun, and her upper part receives all the Light, then her lower Hemifphere ( which would otherwife be altogether dark) is enlightened by the Reflexion of the SunBeans from the Earth. When thefe two Plannets are in Oppofition, then that part of the Earth which could not receive any Light from the Sun-Beams, is moft enlightened by the Moon, being then in her Fill; and as the doth moft Illuminate the Earth when the Surn Beams cannot; fo the grateful Earth Returns to her as great ( nay greater) Light when fhe moift wants. it ; fo that always that viffible part of the Moon, which receives nothing from the Sun, is enlightened by the Earth, as is proved by Galileus, with many more Ar:
guments, in that Treatife which he calls Syfema mundi. True indeed, when the Moon comes to a quartile, then you can neither difcern this Light, nor yet the darker part of her Body, and that for a double reafon.
r. Becaufe the nearer it comes to the Full. the lefs Light does it receive from the Earth, whofe Illumination does always decreafe in the fame Proportion as the Moon does Increafe.
2. Becaufe of the Exuperancy of the Light in the other parts. 2 uippe illuftratum mediam /peciem recipit valentiorem, the clearer brightnefs involves the. weaker, it being with the Species of Sight, as it is with thofe of Sound ; and as the greater Noife drowns the lefs, fo the brighter Object hides that which is more obfcure. But as they do always in their Mutual Viciffitudes participate of one anothers Light; fo alfo do they partake of the fame Defects and Darkenings; for when our Moon is Eclipfed, then is their Sun darkened; and when our Sun is Eclipfed, then is their Moon deprived of its Light, as you may fee affirmed by Mefin. 2uod :/2 terram nobis ex alto liceret intueri, quemadmodum deficientem lunam ex longinguo Spectare poftumus, videremus tempore Eclipfis folis terrea aligum partem Inmine jolis deficere, eodem plane modo ficut ex oppofitio lung deficit. "If we might behold ' this Globe of Earth at the fame diftance, "as we do the Moon in her Defect, we

118 That the Moon may be a Woria. " might difcern fome part of it darkened " in the Suns Ecliples, Juft fo as the Moon " is in hers. For as our Moon is Eclipfed by the Interpofition of our Earth, fo is their Moon Eclipfed by the Interpofition of theirs, The rianner of this Murual Illuminationbetwixt thefe two you may plainly difcern in this Figure following.

Where

Where A reprefents the Sun, B the Earth, and C the Moon; Now fuppofe the Moon C to be in a Sextile of Increafe, when there is only one fmall part of her Body Enlightened, then the Earth B will have fuch a part of its vifible Hemifphere darkened, as is Proportionable to that part of the Moon which is Enlightened ; and as for fo much of the Moon, as the Sun-Beams cannot reach unto, it receives Light from a Proportional part of the Earth which fhines upon it, as you may plainly perceive by the Figure.

You fee then that Agreement and Simitude which there is betwixt our Earth and the Moon. Now :the greateft difference which makes them unlike, isthis, that the Moon enlightens our Earth round abour, whereas our Earth gives Light only to that Hemifphere of the Moon wiich is vifible unto us, as may be certainly gathered from the conftant appearance of the fame Spots, which could not thus come to pafs, if the Moon had fuch a Diurnal Motion about its own Axis as perhaps our Earth hath: And though fome fuppoie her to move in; an Epicycle, yet this doth not fo turn her Body Round, that we may difcern both Hemífpheres; for according to that Hypothefis ("ay they') the Motion of her Eccentrick doth turn her Face towards us, as much as the other doth from us.

But now, if any Queftion what they

That the Moon may be a World.
do for a Moon who Live in the upper part of her Body? I Anfwer, the folving of this, is the moft uncertain and difficule thing that I know of, concerning this whole matter.' But yet unto me this feems a probable Conjecture.
That the upper Hemifphere of the Moon doth receive a Sufficient Light from thofe Plannets about it; and amongft thefe, $V$ enus ( it may be) beftows a more efpecial brightnef, fince Galileus hath plainly difcerned that the Sutfers the fame increafes and decreafes, as the Moon hath, and 'tis probable that this may be perceived there, without the help of a Glafs, becaufe they are far nearer it, than we. When Venss (faich Keplar lies down in the Perige or lower part of her fuppofed Epicycle, then is fhe in Conjunction with her Husband the Sun, from whom after the hath departed forthe fpace of Ten Months, the gets plenum uterum, and is in the Full.

But you'l reply, though Venus may beftow fome Light when the isover the Moon, and in Conjunction, yet being in Oppofi.. tion the is not vifible to them, and what fhall they then do for Light?

I Anfwer, then they have none, nor doth this make fo great a Difference betwixt thofe two Hemilpheres, as there is with us, betwixt the places under the Poles, and the Line. And befides, 'tis Con.
i2i That the Mopi may be a World. Confiderable, that there are two kind of Plannets.

1. Primarie, fuch whofe proper Circles do encompats the Body of the Sun, whereof there are Six. Saturne, Ffupiter; Mars, Ceres, or the Earth, Venis, Merchry. As in the Frontifpice.
2. Secondary; fuch whofe proper Circles are not about the Sun, but fome of the other Primarie Plannets. Thus are there two about Saturne, four about ${ }^{\prime}$ upiter, and thus likewife does the Moon encompafs our Earth. Now tis Probable that thefe leffer, Secondary Plannets, are not fo accommodated with all Conveniencies of Habitation, as the others that are more Principal.

But it may feema very Difficult thing to Conceive, how fo Grofs and Dark a Body as our Earth, fhould yeild fuch a clear Light as Proceeds from the Moon; and therefore the Cardinal de $\mathrm{Cu} \int_{a}$ (who thinks every Star to be afeveral World) is of Opinion, that the Light of the Sun is not able to make them appear fo Bright; but the reafon of their fhining is, becaufe we behold them at a great Diftance through their Regions of Fire which do fet a fhining Luftre upon thofe Bodies that of themfelves are Dark. Unde figuis efjet ex. tra regionem ignis, terra ifta in circumferentic fuce regionis per medium ignis lucida fella appareret. "So that, if a Man were beyond "the Region of Eire, this Earth would
"appear through that, as a bright Star. But if this were the only Reafon, then would the Moon be freed from fuch Increafes and Decreafesas the is now lyable unto.

Keplar thinks that our Earth receives that Light whereby it thines, from the Sun, but this (faith he) is not fuch an intended clear Brightnefs as the Moon is capable of, and therefore he gueffes, that the Earth there, is of a more Chokie foyl, like the Ifle of Crete, and fo is betterable to Reflect a ftronger Light, whereas our Earth muft fupply this Intention with the quantity of its Body. But this I Conceive to be a needlefs Conjecture, fince our Earth, if all things were well Confidered, will be found able enough to Reflect asgreat 2 Light. For,
I. Comfider its Opacity ; if you mark thefe Sublunary things, you thall perceive that amonglt them, thofe that are moft Perpicuous, are not fo well able to Reverberate the Sun-Beams, as the thicker Bodies- The Rays pafs fingly througha Diaphanous matter, but in an Opacous fabftance they are doubled in their Recurn, and Multiplied by Reflexion. Now if the Moon and the other Plannets can fhine fo Clearly by beating back the Sun-Beams, why may not the Earch alfo thine as well, which agrees with them in the caufe of this Brightnefs theirOpacity ?
2. Con-

That the Moon may be a World.
2: Confider what a clear Light we may Difcern Reflected from the Earth in the midft of Summer, and withall Conceive how much Greater that mult be which is under the Line, where the Raies are more Directly and Strongly Reverberated:
3. 'Tis Confiderable that though the Moon does in the Night time feem to be of fo clear a Brightnefs, yet when we look upon it in the Day, it appears like fome little, whitifh Cloud:" Nor but thatat both times, fhe is of an equal Light in her felf. The Reafon of this Difference is, becaule in the Night we look npon it through a Dark and Obfaure medium, there being no other Enlightened Body, whore Brightnefs may Abate from this: Whereas in the Day time, the whole Heavens round about it, are of an equal Clearnefs, and fo make it to appear with a weaker Light. Nuw becaufe we cannot fee how the Enlightered parts of our Earth do look in the Night, therefore in comparing it with the Moon; we muft not Confider her, as Ihe is beheld through the Adrantage of a Dark Medium, but as the feems-in the Day-time: Now, in any clear Sun-hineDay, our Earth does appear as Brightas the Moon, which at the fame timedoes feem like fome duskifh Cloud (as any little Obfervation may eafily Manifeft.) Therefore we need not doubr but that the Earth is as well ableto give Light, as the Moon. To this, it may be added, that thofe

> That the Moon may be aWorld.
thofe very Clouds, which in the Daytime Yeem to be of an equal Light to the Moon, do in the. Evening become as Dark as our Earth; and as for thofe of them, which are looked upon at any great Dif. rance, they are often Miftaken for the Mountains.
4. 'Tis Confiderable, that though the Moon feem to be of fo great a Brightnefs in the Night, by reafon of its nearnels unto thofe feveral fhadows which it cafts; yet is it of it 解f Weaker than that part of Twilight, which ufually we have for half an Hour after Sun-fet, becaufe we cannot, till after that time, Difcern any fhadow to be made by it.
$\dot{s}$. Confider the great Diffance at which we behold the Plannets, for this muft needs add much to their Shining; and therefore Cufanus (in the above cited Place) thinks, that if a Man were in the Sun, that Plannet would not appear fo Bright to him, as now it doth to us, becaufe then his Eye ,could difcern but little, whereashere, we may Comprehend the Beams as they are Contracted in a narrow Body. Keplarbehölding the Earth from a high Mountain, when it was Enlightened by the Sun, Confeffes, that it appeared unto him of an incredible Brightnefo, whereas then he could only fee fome fmall parts of it; bue how much Brighter would ir have appeared if he might ina direct Line behold the whole Globe of Earth, and thefe Rays

K
gathered

That the Moon may be a World. gathered together! So that if we Confider that great Light which the Earth receives from the Sun in the Summer, and then Suppofe we were in the Moon, where we might fee the whole Earth langing in thofe vaft Spases, where there is nothing to Terminate the Sight, but thofe Beams which are there Contracted into a little Compafs; I fay, if we do weil Confider this, we may eafly Conceive that our Earth appears as Bright to thofe other Inhabitants in the Moon, as theirs doth to us.

But here it may be Objected, that with us. for many Days in theYear, the Heavens are fo overclowded, that we cannot fee the Sun at all, and for the moft part, in our brighteft Days, there are many fcattered Clouds which fhade the Earth in fundry Places; fo that in this Refpert, it muft needs be unlike the Moon and will not be able to yeild fo clear, unintermited a Light, as it Receives from that Planner;

## To this I Anfwer.

r. As for thofe leffer brighter Clouds which for the moft part are Scatteredup and down in the cleareft Days, thefe can be no Reaton why our Earch fhould be of a Därker appearance, becaufe thefe Clonds being near unto the Earth, and fo not Diltinguifhable at fo great a Diitance from it, and likewife being llluminated on their back Parts by the Sun beams were Immediately Reflected from our Earth.
2. When thefe Clouds that are Interpofed, are of any large Extention or grear Opacity, as it is in Extraordinary lafting and great Rains, then there muft be fome Difcernable alterations in the Light of our Earth ; But yet this does not make it to Ditter from the Moon: fince it is fo allo with that $P$ nnet, as is fhewed in the later part of the next Chapter.
128. That the Moon may be a World.

## PROP. XII.

That'tis Probable there may be fuch Meteors belonging to that World ins the Moon, as there are with us.

PLutarch Difcuffing this Point, Affirms, that it is not necellary there fhould be the tame means of Growth and Fructifying in both thefe Worlds, fince Nature might in her Policy find out more ways than one, how to bring about the fame Effect. But bowever, he thinks it is Probable, that the Moon her felf fendeth forth warm Winds, and by the Swifnefs of her Motion, there fhould breath out a Sweat and Comfortable Air, Pleafant Dews, and gentle Moifture, which might ferve for Refrefling and Nourifhment of the Inhabitants and Plants in that other World.

But fince they have all things alike with us , as Sea and Land, and Vaporous Air

Encompafling both, I fhould rather therefore think, that Nature there fhould ufe the fame way of Producing Meteors, as the doth with us ( and not by a Motion, as Plutarch Suppofes,) becaufe the doth not love to Vary from her ufual Operations without fome Extraordinary Impediment, but fill keeps her Beaten Path, unlefs fhe be Driven thence.
One Argument wherebyI Thall Manifeft this Truth, may be taken from thofe new Stars which have appeared in Divers Ages of the World, and by their Paralax, have been Difeerned to have been abobve the Moon, fuch as was that in Caffopecia, that in Sagittarios, with may others betwixt the Plannets. Hipparchus in his time took Efpecial notice of luch as thefe, and there- Plm.1at: fore Fancied out fuch Conftellations, in 26. which to place the Stars, fhewing how many there were in every Afterifm, that fo afterwards, Pofterity might know, whether there were any new Star Produced, or any old one Miffing. Now the Nature of thefe Comets may Probably Manifef, that in this other World there are other Méteors alfo; for there in all likelyhood are nothing elfe, but fuch Evaporations caưfed by the Sun, from the Bodies of the Plannets. I Thall Prove this, by fhewing the Improbabilities and Inconveniences of any other Opinion.
For the better purfuit of this, 'tis in the' firft place requifite, thas I deal with our K $3 \quad$ clieff chief: adverfary, Cafar latgalla, who doth molt directiy oppofe that-Truth which is here to be proved: He endeavotiring to confirm the Incorruptibility of the Heavens, and being there to fatistie the Argument which is taken from thefe Comers, he Anfwers it thus: Ant argumestuma def fuxptum ex paralaxi, non eft efficax, aut fi eff: effecaxi écrum inftrumentorum ufum decipere, pul ran tione offri, vel medii, vel diffantio: ayt ergo erat inf fuprexpa parte ateris, aut fi in coldo, tum. forfan factrm eraf ex reflocteone radiortum Saturni é Tovis, qui tume in Conjunctione fuerapf. "Either the Argument from the $\mathrm{Pa}_{-}$ "ralax is not Efficacions, or if it be, yet "the vife of the Inftrmments might deceive, "either. in regard of the Star, of the Me"djum, or the difance, and fo this Comet " might be in the upper Regions of the "Air; or if it were in the Heavenṣ, there "it might be prodiced by the Reflectionof "the Rays from Saturn and 7upiter, who "were then in Conjunction. You fee what fhifts he is driven ta how he runs up and down to many Starting Holes, that he may find fome thelter, and in ftead of the ftrength of reafon, he Anfwers with a Mulritude of Words, thinking ( as the Proverb is) that he may ple Hail, when he hath no Thunder. Nibih turpies (faith * Seneca) dubio do incerto, pedem modo referente, moda producente. "What can there be more un"feemly in one that hould be a fair difur"tant, than to be now herex now there,
"and fo uncertain, that one cannot tell where to find him? He thinks that there arenot Comets in the Heavens, becaufethere may be many other reafons of fuchappearrances ; but what he knows not; perhaps (he fays) that Argument from the Paralax is not fufficient, or if it be, then there may be fome deceit in the Obfervation. To this mumnd.colI may fafely fay, that he may jutly be ac. $\log$. 3 . counted a weak Mathematician who miftrufts the. ftrength of this Argument; nor can he know much in Aftronomy, who underftands not the Paralax which is a. Foundation of that Science; and I am fure that he is a Timerous Man, who dares not beleive the frequent Experience of his Senfe, or truft to a Demonitration.
True indeed, I grant tis poffible, that the Eye, the Medium, and the ditance may all deceive the beholder; but I would have him thew which of all thefe was likely to caufe an Errour in this Obfervation? Meerly to fay they might be. deceived, is no Sufficient Anfwer; for by this I might confutethe pofitions of all Aftronomers,and Affirm the Stars are hard by us, becaufe. 'tis poffible they may be deceived in their Obferving diftance. But I forbear any further reply; my Opinion is of that Treatife, that either it was fet forthupurpofely to tempt a Confutation, that he might fee the Opinion of Galilous confirmed by others, or elfe it was invented with as much haft and Negligence as it was Printed, there

K 4
being

That the Moon may be a World. being in it, almoft as many Faults as Lines. Others think, that there are not any new Comets, but fome Ancient Stars that were there before, which now fline with that unufual brightnefs; by reafon of the Interfofition of fuch Vapours, which do Multiply their Light; and fo the Alteration will be here only, and not in the Heavens. ${ }^{\text {T}}$ Thus, Arifotle thought the appearance of the Milky way was produced. For he held, that there were many little Stars, which by their Influence did conftantly attract fuch a Vapour towards that place of Hea. ven, fo that it always appeared white. Now by the fame reafon, may a brighter Vapour be the caufe of thefe appearances.

But how probable foever this Opinion may feem, yet if well confidered, you fhall find it țo be altogether abfurd and impoffible: for,
r. Thefe Stars were neyer feen there before, and ris not likely, that a Vapour being hard by us, can fo multiply that Light, which conld not before be at all dif. cerned.
2. This fuppofed Vapour cannot be either contrafted into a narrow compafs, or dilated into abroad. I. It could not be with in a little Space, for then that Star would not äppear with the fame Multiplied Light to thofe in other:Climates. 2. It cannot be a diliated Vapour, for then other Stars which were difcerned through the fame Vapour, would feem as big as that; this Ar-

That the Moon may be a World.
Argument is the fame in Effect, with that of the Paralax, as you may fee in this Figure.

Suppofe A B to be a Hemifphere of one Earth; C D to be the upper part of the higheft Region, in which there might be either a contracted Vapour, as $G$, or elfe a dilated one, as H I. Suppofe E F likewife to reprefent half the Heavens, wherein was this appearing Comet at K. Now I fay, that a contrafted Vapour, asG, could not caufe this appearanct, becaufe an Inhabitant at Mcould not difcern the fame Star with the brightnefs, but perhaps another at L, betwixt which the Vapour is directly interpofed. Nor could it be caufed

That the Moon may be a World. by a dilated Vapour, as H , becaure then all the Stars that were difcerned throughit, would be perceived with the fame brightnefs.
"Tis neceffary therefore that the caufe of this appearance fhould be in the Heavens. And this is granted by the moft and beft Aftronomets. But, fay fome, this doth not Argue any Natural Alteration in thofe purer Bodies, fince til probable that the Concourfe of many little Vagabond Stars, by the Union of their Beams may caufe fo great a Light. Of this Qpinion were $\mathrm{K} n$ $a x a g o r a s ~ a n d ~ Z e n o ~ a m o n g f t ~ t h e ~ A n c i e n t, ~$ and Baptifà Cifatus Blencanus, with cthers amongit our Modern Aftronomers. For, fay they, when there háppens to be a Con: courfe of fome few Stars, then do manyother Fly unto them from all the parts of Heaven like fo many Bees unto their king. But $\mathbf{r}$. 'Tis not likely that amonglt thofe which we Count the fixed Stars, there fhould be any fuch uncertain Motions, that they can wander from all parts of the Heavens; as if Nature had neglected them, or forgot to appoint them a Determinate Courfe. 2. If there be fach a Conflux of thefe, as of Bees to their King, then what reafon is there, that they do not fill carry with it, that fo the Comet may not be
Claviusin fpheram. cap. I. diffolved? But enough of this. You may commonly fee it Confured by many other Arguments. Others there are, who af- firm thefe to be fome new Created Stars, pro-

## That the Meon may be a World.

produced By an extraordinary Supernatural Yower. I anfwer, true indeed, tis poffible they might be fo, but however, 'tis not likely they were fo, fince fuch appearances may befalved fome other way ; wherefore to Fly unto a Miracle for fich things, werea a great Injury to Nature, and to derogate from her skill; an Indig nity much mifbecoming a Man who profenes himfelf to be a Philofopher: Miriculum (faith one) of ignorantia Afylum, a - Miracle often ferves for the Receptacle of a lazy Ignorance; which any induftrious Spirit would be afhamed of, it being buc an idle way to fhift off the Labotur of any further fearch. But here's the mifery of it, we firt tye our felves unto Arifotles Principles, and then conclude that nothing could contradiat them, but a Miracle; whereas 'twould be much better for the Common-Wealth of Learning, if we would ground our Principles rather upon the frequent Experiences of our own, than the bare Authority of others.

Some there are who think, that there Comets are nothing elfe, but Exhalations from our Earth, carryed up into the higher parts of the Heaven. So Peno, Rotb- Tycho Promannus or Galilaus. But this is not poflible, sjm. l. I. fince by Computation 'tis found, that one c.9. of them is above 300 times bigger than the whole Globe of Land and Water. Others therefore have thought that they did proceed fiom the Body of the $S \mathrm{~mm}$, and that

Plan.

136 That the Moon may be a World. Plannet only is Cometarum officina, unde tanquam emiJarizio exploratores emevitterchtur brevi ad folem redituri: The Shop or Forge of Comets from whence they were fent, like ro many Spies, that they might in fome fhort Space return again. But this cannot be, fince if fo much matter had proceeded from him alone, it would have made a fenfible Diminution in his Body. The Noble Tycho therefore thinks, that they confift of fome fuch Fluider parts of the Heaven, as the Milky way is framed of, which being condenft together, yet not attaining to the confiftericy of a Star, is in fome fpace of time rarifyed again into its wonted Nature. But this is not likely; becaure the appearance of the Milky way does notarife from fome Fluider parts of the HeaFrommend. ven (as he fuppofes) but from the Light Meter. of many leffer Stars which are thereabouts. 1.2.c. .5. And therefore it is ufually thus defcribed.
 trax.5.c.2. fellarum fixarum greges qut confufo do pallenti lumine tractum illum inalbast. The Milky way is nothing elfe but the Pale and Con: fured Light of many lelieier Stars, whereby fome parts of the Heaven are made to appear white.
And befide, what likely caufe can we conceive of this Condenfation, |unlelis there be fuch qualities there, as there are in our Air, and then, why may not the Plannets have the like qualities as our Earth? and if fo, then "tis moreprobable, that they are
made

That the Moon may ba World.
made by the Ordinary way of Nature, as they are with us, and confift of fuch Exhalations from the Bodies of the Planners, as being very much rarified, may bedrawn up, through the Orb of groifs Vaporous Air, that incompaffes them. Nor is this a fingular Opinion ; but it feemed moft likeIy to Camillus 'Gloriofus. Th'. Campanella, De Comet. Eromondus, with fome others. But if you 1. 5.c.4. ask, whither fhall all thefe Exhalations re- Appl.pro turn ? IAnfwer, every one into his ownPlannet. If it be again Objected, that then Galil. Mefeor. L. 3.c.c.Art there will be fo many Centers of Gravity, 6 . and each feveral Plannet will be a diftinft World; I reply, we have not like probability concerning the reft ; bur yer, perhaps all of them are fo, except the Sun, though Cujanus, and fome others, think, there is one Leeants. ale ; and later times have difcovered fome 7 yf f.l. $\mathrm{o} . \mathrm{c}$. leffer Clouds moving round about him. 23. But as for Seturn, he hath two Moons on each fide. Jupiter hath four, that Incitcle him with their Motion. Which are likewife Eclipled by the Interpofition of his Body, as the Moon is by ourEarth. Venus is Obferved to increafe and decreafe as the Moon. And this perhaps hath been noted by former Ages, as may be gueft by that Relation of Saint Auffin out of Varto. Mars, and all the reft, derive their Light from the Sun. Concerining Mercury, therehath been little or no Obervation, becaufe, for the moft part, be lies hid under the Sun-Beams, and feldom appears by himfelf. Bur when

DeCivit.
Dei l.21.
sap. 8. he does, yet the compafs of his Body is fo little," and bis light of fo clear a brightnef, by reafon of his nearnefs to the Stin, that the Perfpective cannot make the fame Difcoveries upon him, as from the Reit.

So that if you Confider their Quantity, their Opacity, of thefe others Difcoveries, you fhall find it probable enough, that each of them may be a feveral World. Efpecially, fince every one of them is alIotted to a feveral Orbe, and not altogether in one, as the fixed Stars feem to be. But this would be too much for to Vent at the firft: the Chief thing at which I now aim in this Difcourle, is to Prove that there may be onein the Moon.
It bath been before Confirmed, that there was a Sphear of thick Vaporous Air Encompaffing the Moon, as the Firft and Second Regions do this Earth. I have now thewed, that thence frich Exhalations may Proceed as do Produce the Comets: Now from hence it may Probably follow, that there may be Wind alio \& Rain, with. fuch other Meteors, as are common amongt us. This Confequence is fo Dependant, that Fromondus dares not deny if, though be would (as he Conferies
De meteror.
l.う. c. 2. Ait. 6 . himfelf; ) for if the Sun be able to Exhale from them fuch Fumes as may caufe

That the Moon mav be a World.
Now, Rain feems to be more Efpecially Requifite for them, fince it may allay the Heat and Scorchings of the Sun, when he is over their Heads. And Nature hath thus Provided for thofe in Pers, with the other Inhabitants under the Line.

But if there be fuch grear, and Frequent Alterations in the Heavens, why cannot we Difcern them?

## 1 Anfwer :

1. There may be fuch, and we not able to Perceive them, becaufe of the Weaknefs of our Eye, and the Diftance of thofe places from us; they are the Words of Fienus (as they are quoted by Fromondus in the above cited place) poffunt maxime permutationes in calo feri etians/i a nobis non conspiciantur ; boc vijus softri debilitas © immenla cali diftantia faciunt. And unto him Affents Fromoindus himflf, when a little after he fayes, Si in Spheris planetarum degeremus, plurima for ars cadeftium nebular. um vellera toto atbexe pafim dijperfa.videre. mus, quorum fpecies jam evanefcit nimià Spatii intercapedine. "If we did live in the "Sphears of the Plannets, we might "there perhaps Difcern many great Clouds " Difperfed through the whole Heavens, which are not now Vifible by Reafon of this great Diftance.
2. Meflin and Keplar. Affirme, that they have feen fome of thefe Alterations. The Words of Maflin are thefe (as I find them Cited.) Jo eclipf( lumari vefpre Dominice pal- Comets, why not fuch as may caufe Winds; why not then fuch alfo as may caufe Rain, fince I have above thewed, that there is Sea and Land, as witf us?

140 That the Mloon may be dWorld.

## 144

That the Moon may be a World. may ouly Underftand the tbings that are above in the Height of the Heavens.

So that 'twere a very Needles thing for us to Search after any Particulars; however, we may Guefs in the General that there are fome Inhabitants in that Plannet: for why elfe did Providence Furnifh that place with all fuch Conveaniences of Habitation as have been above Declared?

But you will fay, perhaps; is there not too great and Intolerable a Heat, fince the Sun is their Zenith every Month, and doth tarry there fo long before he Leavs it?

## I Anfwer,

x. This may, Perhaps, be Remedied (as it is under the Line) by the Frequency of Mid-Day Showers, which may Cloud their Sun, and Cool their Earth.
2. The Equality of their Nights doth much Temper the Scorching of theDay ; and the Extream Cold that comes from the one, Requires fome fpace before it can be Difpelled by the other, fo that the Heat Spending a great while before it can have the Victory, hath not afterwards much time to Rage in. Wherefore notwithfanding this Doubt, yet that place may Remain Habitable. And this was the Opinion of the Cardinal de CuJa, when D. da. fpeaking of this Plannet, he Gays, Hic e.12.

That the Moon m.ry be aWorld.
malium atque vegetabiliusion. "This part "of the World is Inhabited by Men, and "Beafts, and Plants. To him ARented Campenella; but he cannot Determine whether they were Men or rather fome other kind of Creatures. If they were Men, then he thinks they could not be Infected with Adams Sin; yet Perhaps, they had fome of their own, which might make them liable to the fame Mifery with us, out of which, it may be, they were Delivered ty the fame means as we, the Death of Chrift ; and thus he thinks that place of the Epplefiais may be Interpreted, where the Apoitle fays, Godgathered allthings togetber in Cbrijf, botb whicb ${ }_{\text {to }}$. are in Earth, and whbich are in the Heavens: So alfo that of the fame Apofle to the Colofjizns, where he fays, that it Pleafed the Fatber to Reconcile all thingsunto bimjelf Col., 20 . by Cbrif), whetber they be things in Earth, or things in Heaven.
But I Dare not jeft with Divine Truths, or apply there places according as fancy Directs. As I think this Opinion doth not any where Contradit Scripture: fo I think likewife, that it cannot be Proved from it. Wherefore Campanella's Second Conjecture may be more Probable, that the Inhabitants of that World, are not Men as we are, but fome other kind of Creatures which Bear fome Proportion, and Likenefs to our Natures. Or it may be, they are of a quite Different Nature

$$
L_{3} \quad \text { finm }
$$ Imagination can Defrribe; our Underftandings being Capable only of fuch things as have Entered by our Senfes, or elfe fuch Mixed Natures as may be Compofed from them. Now, there may be many other Species of Creatures befide thofe that are already known in the World; there is a great Chafme betwixt the Nature of Men and Angels; It may be the Inhabitants of the Plannets are of a Middle Nature between both thefe. 'Tis not Improbable that God might Create fome of all Kinds, that fo he might more Compleatly Glorifie him. felf in the Works of his Yower and Wif? dom.

Cufanus too, thinks they differ from uts in many refpects; I will fet down his words as they may be found in the above Cited place, Sufpicamur in regione folis magis effe folares, claros ó illuminatos intellectuales habitatores, (piritualiores etiam quìm in lusîa, wbi magis lunatici, © interra magis materiales |  |

"We may Conjecture (faith he) the "Inhabitants of the Sun are like to the "Nature of that Plannet, more clear and "bright, more Intellectual than thofe in " the Moon where they are nearer to the "Nature of that duller Plannet, and thofe " of the Earth being more grofs and mate" rial than either, fo that thefe Intellectual "Natures in the Sun, are more form than " matter, thofe in the Earth more matter " than form, and thofe in the Moon betwixt "both. This we may guels from the Fie"ry Influence of the Sun, the Watery and
"Aereous Influence of the Moon, as alfo
" the Material Heavinefs of the Earth. In
"fome fuch manner likewife is it with the
"Regions of the other Stars; for, we
"Conjecture that none of them are with-
"out Inhabitants, but that there are fo
" many particular Worlds and parts of
"this one Univerfe, as there are Stars,
"which are innumerable, unless it be to
"him who Created all things in Num${ }^{c}$ ber.

For he held that the Stars were not all in one equal Orb as we commonly fuppofe; but that fome were far higher than others, which made them appear les; and that many others were to far above any of thefe, that they were altogether invifible unto us. An Opinion which (as I con-
ceive)
i4 8 That the Moon may be a World. ceive ) hath not any great probability for it, nor certainty againit it.

The Preift of Saturn relating to Plutarch (as he feigns it) the Nature of thefe Selenites, told bim, they were of divers difpofitions, fome defiring to live in the lower parts of the Moon, where they might look downwards upon us, while others were more furely mounted aloft, all of them fhining like the Rays of the Sun, and as being Vittorious, are Crowned with Garlands made with the Wings of Euffathia or Conftancie.

It hath been the Opinion amongit fome of the Ancients, that their Heavens and Elyfian Fields were in the Moon where the
Nat. Com. Air is moft quiet and pure. Thus Socrates;
l.3.c. 19. thus Plato, with his followers, did efteem this to be the place where thofe purer Souls Inhabite, who are freed from the Sepulcher, and Contagion of the Body. And by the Fable of Ceres, concinually wandring in fearch of her Daughter Proferpina, is meant nothing elfe but the longing defire of Men, who live upon Ceres Earch, to attain a place in Proferpina, the Moon or Heaven.

Plutarch alfo feems to affent unto this; but he thinks moreover, that there are two places of happinets anfwerable to thofe two parrs which he Fancies to remain of a Man when he is Dead, the Soml and the Underftanding ; the Soul he thinks is made of the Moon; and as our Bodies do fo proceed

## That the Moon may be a World.

ceed from the duft of this Earth, that they fhall return to it hereafter ; fo our Souls were generated out of that Plannet, and fhall be refolved into it again; whereas the underftanding fhall afcend unto the Sun, out of which it was made, where it fhall poffefs an Eternity of well-being, and far greater happinef than that which is enjoyed in the Moon. Sothat when a Man Dies, if his Soul be much polluted,' then muft it wander up and down in the middle Region of the Air, where Hell is, and there Suffer unfpeakable Torments for thofe Sins whereof it is Guilty. Whereas the Souls of better Men, when they have in fome Space of time been purged from that impurity which they did derive from the Bo. dy, then do they return into the Moon, where they are poffert with fuch a joy, as thore Men feel who profefs holy Myfteries, from which place ( faith he) fome are fent down top have the Superintendance of Oracles, being diligent either in the Prefervation of the good, either from, or in, all Perills, and the Prevention or Punifh: ment of all Wicked Actions; but ifin thefe. Imployments they mif-behave themfelves, then are they again to be imprifoned in a Body, otherwife they remain in the Moon, till their Souls be refolved into it; and the underftanding being cleared from all Impediments, afcends to the Sun which is its proper place. But this requires a diverfe Space of time, according to the divers Af. fections

150 That the Moon may be a World. fections of the Soul. As for thofe who have been Retired and Honeft, addiating themfelves to a Studious and quiet Life, thefe are quickly preferred to a higher Happinefs. But as for fuch who have bufied themfelves in many Broyls, or have been Vehement in the Profecution of any Luft, as the Ambitious, the Amorous, the Wrathful Man, thefe ftill retain the Glimpfes and Dreams of fuch things as they have performed in their Bodies, which makes them either altogether unfit to remain shere, where they are, or elfe keeps them long ere they can put off their Souls. Thus you fee Plutarchs Opinion concerning the Inhabitants and Neighboursof the Moon, which (according to the manner of the Academicks ) he delivers in a Third Perfon; you ree he makes that Plannet an Inferior kind of Heaven, and though he difter in many Circumftances, yet doth he defcribe it to be fome fuch Place, as we fuppofe Paradife to be. You fee likewife his Opinion concerning the Place of the Damned Spirits, that it is in the middle Region of the Air; and in neither of thefe is he fingular, but fome more late and Orthodox Writershave agreed with him. As for the place of Hell, many think it may be in the Air, as well as any where elfe.

True indeed, S. Auftin affirms that this

That the Mooin may be a World,
151
another World without this, becaufe our
 nef. But the moft will have it placed to- 30 . wards the Center of our Earch, becaufe tis faid, Chrift defcended into the: lower

Eph. 4.90 parts of the Earth ; and fome of thefe are fo Confident, that this is its Situation, that they can defribe you its bignefsalfo, and of what Capacity it is. Francis Ribera in his Comment on the Revelations, (peaking Rev. 14.20 of thofe words, where "tis faid, that the Bloud weest out of the Wine-prefs, even unto the Hor fes-Bridles by tbe fpace of one Thoufand and Six Handered Furlongs, Interprets them to be meant of Hell, and that Number expreffes the Diameter of its Concavity, which is 200 Italian Miles; But Leffius thinks that De Morib. this Opinion gives them too much Room in div. lis $3 . \mathrm{c}$. Hcll, and therefore he guefles that ${ }^{2}$ tis not ${ }^{24}$ : fo wide; for (faith he) the Diameter of one League being Cubically multiplied; will make a Sphere capable of 800000 Millions of Damned Bodies, allowing to each fix Foot in the Square; whereas (fays he )'tis certain, that there fhall not be one Hundered Thoufand Millions in all that thall be damned. You fee the bold Cfefuit was careful that every one fhould have but Roomenough in Hell, and by the ftrangene's of the Conjecture, you may guefs that he had rather be abfurd, than feem either uncharitable or ignorant. I remember there is Relation in Pliny; how that Dionyfodorous a Mathematician, being

Dead

152 That the Moon may be a World. Dead, did fend a Letter from this place to fame of his Friends upon Earth, to certifie them what diffance there was betwixt the Center and Supericies: he migbt have done well to have prevented this Controverfie, and enformed them the utmoft Capacity of that Place. However, certain it is, that that Number cannot be known; and probable it is, that the place is not yet determined, but that Hell is there where there is any Tormented Soul, which may be in the Regions of the Air, as well as in the Center: And therefore perlaps it is, that the Devil is ftiled the Prince of the Air. But of this only occafionally, and by reafon of Pliutarcbs Opinion concerning thofe that are round about the Moon; as for the Moon it felf, he efteems it to be a lower
Curfilent cractula. kind of Heaven, and therefore in another place he calls it a Terreftrial Star, and an Olympian or Celeftial Earth; anfwerable, (as I conceive) to the Paradife of the School-Men. And, that Paradife was either in, or near the Moon, is the Opinion of fome later Writers, who derived it (in all likely-hood) from the Affertion of Plato, and perbaps, this of Plutarch. Toffatus Sirwvasu. lays this Opinion upon JFocder, Hifaclensiss, l.1. . . . .eet. and the Venerable Bele ; and Pererims Fa7. InGenef. thers it upon Strabus and Rabanus his Mafter. Some would have it to be Situated in fuch a place as could not be difcovered, which caured the Pen-Man of EJdrafs to make it a harder mater to kinow the ourtgoings of $P_{a}$ radije,

## That the Moon may be a World. <br> 153

radije, than to weigh the weight of tbe Fire, 2E/dr.47: or Meafure the Blafts of Wind, or call again a Day tbat is paff. But notwithfanding this, there be fome others, who think, that it is on the Top of fome highMountain under the Line; and thefe interipreted the Torrid Zone to be the Flaming Sword whereby Paradife was guarded. 'Tis the confent of divers others, that Paradife is Situated in fome high and Eminent Place. So Tofatus : Eft etiam Paradijus fith altijij- In Gene. ${ }^{2 n} a_{j}$ jupra onnem terre alituthinem; " Para"dife is Situated in fome high blace above "the Earth: and therefore in his Comment upon the 49 of Gemefis, he underitands the Blefling of $\mathcal{F a c o b}$, concerning the everlaating Hills to be meant of Paradife, and the Bleffing it felf to be nothing elfe buta Promife of Chrifts coming, by whofe Paffron the Gates of Paradire fhould be opened. Unto him afiented Rupertus, Scotus, and moft of the other School-Men, as I find them Cited by Peterisus, and out of him in Commens:
 becaufe in probability, this place was not ${ }_{L}^{2.8 .} 8.1 .63$. overflowed by the Flood, fince there were fei.6.7. no Sinners there, which might draw that Curfe upon it. Nay, Toffatus thinks, that the Body of Ezoch was kept there; and fome of the Fathers, as Tertullian and Asyfiz, have affirmed, that the Blefled Souls were referved in that place till the Day of Judgment ; and therefore 'tis likely that it was not overflowed by the Flood, is were eafie
is4 That the Moon may be a Wiorld. to produce the Unanimus confent of the Fathers, to prove that Paradife is yet really Exiftent: Any diligent perafer of them, mady eafily obfervie how they do generally Interpret the Paradife whereto Saint Paill 2Cor.12.4: was wrapt, and that wherein our Saviour be locally the fane from whence our firt Parents were Baniffed: Now there cannot be any Place on Earth defigned where this thould be: Andtherefore it isnot altogether improbable that it was in this other World. And befides, fince all Men fhould have went Naked if' Adam had not Fell, 'tis Requefte therefore that it thould be Simated in ome fuch place where is might be Priviledged from the Extremities of Heat and Cold. But now this could not be (they thongtr) To Comieniently in any Lower, as it might in fome higher Air. For thefe and fuch like Contiderations, have fo many Affirmed, that Yaradife was in a high Elevated place. Which fome have Conceived could be nowhere but in the Moon! For it could not be in the Top of any Mountain; nor can we think of any other Body Separated from this Earth, which can be a more Corvenient place for Habitation than this Plannet; therefore they Concluded that it was there.

It could not be on the Top of any Mountain.

That the Moon may be a World.
ture, that the Higheft of them was Overflowed.
2. Becaufe it mult be of a greater Extention, and not fome fmall Patch of Ground, fince tis likely all Men hould have Lived there, if Adam had not Fell. But for a Satisfaction of the Arguments, together with a Farther Difoourfe of Paradife, I thall Refer you to thofe who have Written Purpofely upon this Subject. Being content for my own part to have fpoken to much of it, as may Conduce to thew the Opinion of others Concerning the Inhabitants of the Moon; I dare not my felf Affirm any thing of there Selenites, becaufe iknow not any Ground whereon to Build any Probable Opinion. ButI think that Future Ages will Difcover more; and our Pofterity, Perhaps, may Invent fome means for our better Acquaintance with thefe Inhabitants. .

PROP.

156 Ibat the Moon may be atforld.

PROP.XIV.

That 'tis: Poflible for fome of our Pof: terity, to find out a Conveyance to this other World, and if there be Inbabitants there, to bave Commerce with them:

AL L.that hath been faid, Concerning the People of the New World, is but Conjectural, and full of uncertanties; nor can we ever look for any Evident or more Probable Bifeoveries in this kind, unlefs there be fome hopes of Inventing means for our Conveyance thither. The Poflibility of which, fhall be the Subject of our Enquiry in this laft Propofition.

And, if we do but Confider by what Steps and Leafure, all Arts do ufually nife to their Growth, we fhall have no caufe to Doubt why this alfo may not here-

That the Moon may be aWorld.
hereafter be found out amongft other Secrets. It hath Conttantly yet been the Method of Providence, not prefently to Bew us all, but to Lead us on by Degrees, from the Knowledg of one thing to another.
'Twas a great While, ere the Plannets were Dittingufhed from the fixed Stars, and fome time after that, ere the Morning and Evening Star were Found to be the fame. And in greater fpace (I doubt not ) butthis alfo, and other as Excellent Myfteries will be Difcoveted. Time, who hath always been the Father of new Truths, and hath Reveiled unto us many things, which our Anceftors were Ignorant of, will alfo Manifeft to our Pofterity, that which we now defire, but cannot know. Veniet tempus. (faith Seneca) quo ifta que numc latent, in lucem dies extrabet, Nat: Qu. er longicris cevidiligentia: Time will come, l.7.cap. 25 . when the Indeavours of after Ages, fhall bring fuch things to Light as now lie hid in Obfcurity. Arts are not yet come to their Solltice. But the Induftry of Future Times, Affifted with the Labours of their Fore-Fathers, may reach that. Height which we could not Attain to. Veniet terspus quo pofferi nofri nos tam aperta nefoife mirentur. As we now wonder 'at the Blindnefs of our Anceftors, who were not able to Difcern fuch things, as feem Plain and Obvious unto us, fo will our Pof-
$M$ terity, fterity, Admire our Ignorance in as Perfpicuous matters.
In the firft Ages of the World the Illanders thought themflves either to be the only Dwellers upon Earth, or elfe if there were any other, they could not polibleConceive how they might have any Commerce with them, being Severed by the Deep and Broad Sea. But after times Found out the Invention of Ships, in which notwithflanding, none but fome bold, Daring Men Durft Venture, according to that of the Tragoedian.

Claud.
praf.ad I . And yet now, how eafie a thing is this lib. de rap. even to aTimorous and Cowardly Nature? other means for our Conveyance to the Moon, cannot feem more Incredible to us, than this did at firft to them, and therefore we have no juft Reafon to be Difcouraged in our Hopes of the like Succefs.

Yea, but (you will fay) there can be no Sayling thither, unlefs that were True which the Poets do bnt Fain, that fhe made her Bed in the Sea. We have not now any Drake, or Columbss, to Undertake this Voyag, or any Dadalus to Invent a Conveyance through the Air.

I Anfwer,

That the Moost may be a World.
1-Anifer, Though we have not, yet why, may not Succeeding times, Raife up fome Spirits as Eriment for new Attempts and Strange Inventions, as any that were before them? 'Tis the Opinion of Kepliar, that as foon as the art of Fly-Differta. ing is Found out, fome of their Nation cum Nus: will make one of the firt Colonies, that Syder. thall 'Tranflant into that other World. I Suppgife, his Appropriating this Preheminence to his own Cuntry-Men, may arife from an 'Overpartial Affection to them. But yet thus farl Agree with him, That when ever that Art is Invented, or any other, whereby a Man may be Conveyed fome Twenty Miles high, or thereabouts, then, 'ris not altogether Improbable that fome or other may be Succeffful in this Attempr.

For the better Clearing of which, I fhall firf lay Down, and then Anfwer thofe Doubts rhat may make it feem utterly Impofible.
Thefe are Chiefly Three.
The Firft, taken from the Natural Heavinefs of a Mans Body, whereby it is made Unfit for the Motion of Afcent , together with the Valt Diftance of that Place from us.
2. From the Extream Coldnels of the不thereal Air.
3. The Extream Thimefs of it.

Both which mult needs make it Impaf-
M 2
lible, Miles thither, as it is Thoufands.

For the Firft, Though it were Suppofed that a Man could Fly, yet we may well think he would be very Slow in it, fince he hath fo Heavy a Body, and fuck a one too, as Nature did not Principally Intend, for that kind of Motion. • Tis ufually Obferved, that amongft the Variety of Birds, thofe which do moft Converfe upon the Earth, and are Swifteft in their Running, as a Pbeafant, Partridg, orc. together with all Domeftical Fowl, are lefs able for Flight, than others, which are for the moft part upon the Wing, as a Swallow, Swift, frc. And therefore we may well think, that Man being not Naturally Endowed with any fuch Condition as may Inable him for this Motion, and being Neceffarily tied to a more Efpecial Refidence on the Earth, mult needs be Slower than any Fowl, and lefs Able to hold out. Thus is it alfo in Swiming; which Arr, though it be Grown to a good Eminence, yet he that is beft Skiled in it, is not Able, either for Continuance, or Swifnefs, to equal a Fifh; Becaufe he is not Naturally Appointed to it. So that though a Man could Fly, yet he would be fo Slow in it, and fo Quickly Weary, that he could never think to Reach fogreat a Journey asit is to the Moon.

But Suppofe with all, that he could Fly

That the Moon may be a World.
as Faft, and Long, as the Swiften : Bird !; yet it cannot Poilibly be Conceived, how he fhould ever be Able to pafs through fo vaft a Diftance, as there is betwixt the Moon and our Earth. . For this Plannet, according to the common Grounds:, is ufually Granted to be at the Leaft, $\boldsymbol{\varsigma}_{2}$ Semidiameters of the Earth from us. Reckoning for each Semidiameter 3456 Englifh Miles, of which the whole space will be about 179712.

So that though a Man could Conftantly keep onin his Journey thither by a Strait Line, though he could Fly a Mhoufand Miles in a Day; yet he would not Arrive thither under 180 Days, or Half a Year.

And how were it Poflible for any to Tarry fo long without Dyet or Sleep?
r. For Diet, I Suppofe there could be no Trufting to that Fancy of Pbilo the Prop: 3. few (mentioned before) who thinks, that the Mufick of the Sphears fhould Supply the Strength of Food.

Nor can we well Conceive, how a Man fhould be Able to Carry fo much Luggage with him, as might ferve for his Viaticemin fo Tedious a Journey.
2. But if he could : yet he mult have rome time to Reft and Sleep in. And I beleive he fhall Scarce find any Lodgings by the Way. No Inns to Entertain Pafrengers, nor any Caftles in the Air (unlefs they be Inchanted ones) to Receive

$$
\mathrm{M}_{3} \quad \text { Poor }
$$

## That the Moon may be a World:

Poori Pilgrims or Errant Knights. : Andfo Confequently, he cannot have any Poffible hopes of Reaching thither.

Notwithftanding all which Doubts, 1 Thall lay down this Pofition.

That Suppofing a Man conld Fly, or by any other means, raife himfelf Twenty' Miles upwards, or thereabouts, it were Poffible for him to come unto the Moon.

As for thofe Arguments of the firft bind, that feem to overthrow the Truth of this, they Proceed upon a wrong Ground. Whillt they Suppofe, that. a Condenfed Body, in any place of the Air; would always Retain in it a ftrong Inclination of Tending Down-wards, towards the Center of this Earth. Wherea as 'tis more Probable, that if it were but fomewhat above this Orb of Vaporous Air, it might there reft Immoveable, and would not have init any Propention to this Motion of Defcent.

For the better Illuftration of this, you muft know, that the Heavinefs of a Body or (as Aisifotle defines it) the pronenefs of it to tend down unto fome Center, is not any abfolute quality. Intrinfical unto it, as if, where-ever the Body did retain its Effence, it mult alfo retain this quality : or as if Nature had implanted in every condenled Body Appetitionem centri, oi fugam estremitatis. Such a Love to the Center and Hatred to the Extremities. Becaure one of thefebeing lefs than a quantity, and the

That the Moon may be a World.
163
the other no more, cannot have any Power of Attraction or Depulfion in them. According to that Common Principle Quantitatis nulla eft efficacia.

But now the True Nature of Gravity is *Amag: this. 'Tis fuch a refpentive mutual defire netical of Union, whereby condenfed Bodies, when attracthey come within the Sphere of their own tion. Vigour, do Naturally apply themelves, So Keplar one to another by Attraction or Coition But being both without the reach of eithers 86 . Vertue, they then ceale to move, and Coper.l. i. though they have general Aptitude, yet capp. ${ }^{26}$. they have not any prefent Inclination or Fof farinin in pronenefs to one another. And fo confe- epittaft. quently, cannot be fyyled heavy. Fantonum:
The meaning of this will be more clearly Illuftrated by a similitude. As any Light Body (fuppofe the Sun) does fend forth his Beams in an Orbicular form; So likewife any Magnetical Body, for Inftance, a round Load-ftone does caft Abroad Magenete. his Magnetical Vigour in a Sphere. 1.2. sqp.7. Thus.

Where fuppofe the inward Circle at $A$, to reprefent the Load-ftone, and the outward one betwixe B C, the Orb that does terminatc its Vertue.

Now any other Body that is like affected coming within this Sphere, as B, will pre. fently delcend towards the Center of it, and in that refpect may be ftiled heavy. Eut Place it without this Sphear as C, and then the defire of Union ceafeth, and to confequently the Motion alfo.

To apply then what hath been faid. This great Globe of Earth and Water, hath been proved by many Obfervations, to partici-

That the Moon may be a World.
pate of Magnetical properties. And asthe Load-ftone does caft forth its own Vigour round about its Body, in a Magnetical compafs : So likewife does our Earth. The difference is, that: it is another kind of Affection which caufes the Union betwixt the Iron and Load-ftone, from that which makes Bodies move unto the Earth. The former is fome kind of nearnefs and Similitude in their Natures, for which Plilofophy as yet has not found a particular Name. The latter does arife from that peculiar quality, whereby the Earch is pro. perly diftinguifhed from the other Elements, which is its Condenfity. Of which the more any thing does participate, by fo much the ftronger will be the defire of Union to it. So Gold and others Merals, whichare mont clofe in their Compofition, are likewife moft fwiff in their Motion of difent.

And though this may feem to be contradicted by the inftance of Metalls, which are of the fame weight, when they are melted, and when they are hard : As alfo of Water, which does not differ in refpect of Gravisy, when is is frozen, and when it is Fluid: yet we muft know, that Metalls are not rarified by Melting, but mollified, And fo too, for frozen Waters; they are not properly condenfed, but congealed into a harder Subftance, the parts being not contracted clofer together, but ftill poffeffing the fame Extention. But yet (I fay) 'tis very probable, that there is fuch

## That the. Moon may be a World.

fuch a Sphere about the Earth, which does terminate its Power of Attracting other things unto it. So that fuppofe a Body to be placed within the Limits of this Sphere, and then ir muft needs tend downwards, towards the Center of it. But on the contrary, if it be beyond this compafs, then there can be no fuch Murual Attraction ; and fo confequently, it muft reft Immoveable from any fuch Motion.

For the farther Confirmation of this, I fhall propofe two Pertinent Obfervations.

The firlt taken in the prefence of many Phyfitians, and related by an Eminent Man in that Profeffion, Hicron. Fracaforius.

Lib. de
Smpath.
fig Antip. cap. 7. There being divers Needles provided of feveral kinds, like thofe in a Mariners Chart, they found, that there was an Attractive Power, not only in the magnet ; But that Iron alfo and Steel, and Silver did each of them draw its own Mettle. Whence he Vid. Bapt: concludes, Omme trabit quod fibi fimili ef. Miffllex- And as thefe peculiar likenelles, have fuch a er. Acrd. Mutual Efficacy; fo tis porbable, that de attrat. exer. 4.
this more general qualification of condenfity, may be the caule, why things fo affeeted defire Union to the Earth. And though tis likely that this would appear betwixt two leffer condenfed Bodies, (as fuppofe two peices of Earth) if they were both placed at Liberty in the 不thereal Air, yet being near the Earth, the ftronger fpe-
cies of this great Globe does as it were drownd the lefs.

Tis a Common Experiment, that fucha: Lump of Ore or Stone, as being on the Ground, cannot be moved by lefs than fix Men, being in the bottom of a deep Mine, may be ftirred by two. The reafon is, becaufe then tis compaffed with At- Nat Hijt. tractive Beams, there being many above it, Cent. I. as well as below it. Whence we may probably Infer (faith the Learned Virulam) "r that the Nature of Gravity, does "work but weakly;alfo far from the Earth;
"Becaufe the Appetite of Union in Denfe
"Bodies, muft be more dull in refpect of " diftance, Aswe may alfo conclude from the Motion of Birds, which rife from the ground but heavily, though with much Labour ; Whereas being on high, they can keep themfelves up, and Soar about by the meer extenfion of their Wings. Now the Reafon of this difference, is not (as fome fally conceive ) the depth of Air under them. For a Bird is not heavier when there is but a Foot of Air under him, than when there is a Furlong. As appears by a Sip in the Water, (an inftance of the fame Nature ) which does not fink deeper, and fo confeguently is not heavier, whent ithas but Five Fatham depth, than when it has Fifty. But the true reafon is, the weaknefs of the defire of Union in Denfe Bodies at a diftance,

So that from hence, there might be juft
occafor to Tax Ariftotle and his:followers, for Teaching, that heavinefs is an abfolute quality of it felf, and really diftinct from condenfity : whereas it is only a Modification of it, or ratber, another Name given to a Condenfed Body, in reference to its Motion.

For if it were abfolute, then it fhould always be Inherent in its Subject, and not have its Effence depend upon the Bodies being here or there. But it is not fo. For,
I. Nothing is heavy in its proper place, according to his own Principle, Nibil grave eft in fuo loco. And then,
2. Nothing is heavy, which is fo far diftant: from that properOrb to which it does belong, that it is not wibhin the reach of its Vertue. As was before confirmed.

But unto this it may by Objected: Though a Body being fo placed, be not heavy in actu fecundo; yet it is in actu primo: becaufe it retains in it an inward pronefs to move downwards, being once fevered from its proper.Place. And thiswere reafon enough, why the quality of heavinefs fhould have an abfolute being.

I Anfwer, This diftinction is only appliable to fuch Natural Powers as can fufpend their Acts; and will not hold in Elementary qualities, whofe very Effence does necefliarily require an exercife of the fecond Act, 25 you may eafily difcern by an Induction of all the reft. I cannot fay, that Body has in it the quality of Heat, Coldnefs, Dri-

That the Moon may be a World.

Which for the prefent, has not the fecond Act of thefe qualities. Andif you mean by the Effence of them, a Power unto them : why, there is not any Natural Body but has a Power to them all.

From that which hath been faid concerning the Nature of Gravity, it will follow ; That if a Man were above the Sphere of this Magnetical Vertue, which proceeds from the Earth, he might there ftand as firmly as in the open Air, as he can now upon the ground : And not only fo, buthe may alfo move with a far greater fwiftnefs, than any living Creatures here below, becaufe then he is without all Gravity, being not attracted any way, and fo confequently will not be liable to fuch Impediments, as may in the leaft manner refift that kind of Motion which lie fhall apply himfelf unto.
If ycu yet enquire, how we may conceive it poffible, that a Condenfed Body fhould not be heavy in fuch a place.
I Ainfwer, By the fame reafon, as a Body is not heavy in its proper Place. Of this I will fet down Two Inftances.
r. When a Man is in the Bottom of a deep River, though he have over him a Multitude of heavy Waters, yet he is not burdened with the weight of them. And though another Body, that fhould be but of an equal Grayity, with thefe Waters, when
1.70 That the Moor may be a World. when they are taken out, would be heary enough to prels him to Death; yet notwithflanding whilft they are in the Channel, they do not in the leaft manner, Cruffh him with their Load. The reafon is, becaufe they are both in their right places; and 'tis proper for the Man being the more Condenfed Body, to be lower than the Waters. Or rather thus, Becaufe the Body of the Man, does more thearly agree with the Earth, in this Affettion; whichisthe ground of its Attraction, and therefore dorh that more ftrongly attract it, than the Waters that are over it. Now, as in fuch a cale, a Body may lofe the Operation of its Gravity, which is, to move, or to prefs downwards: So may it likewife, when it is fo far out of its place, that this Attractive Power cannot reach unto it.

* Pbyfl.3. Tis a Pretty Notion to this Purpofe, 2.6.art.2.i Mentioned by ${ }^{*}$ Albertus de Saxomia, and *Viridar. out of him by * Fitancis Mendoca; That l.4.Prob: the Air is in fome part of it Navigable. 47.

Vide.Arch.
l. de infidentibus. bumido.

And that upon this Statick Principle ; any Brafs or Iron Veffel (Suppofe a Kettle) whofe Subftance is much Heavier than that of the Water, yet being Filled with the Lighter Air, it will Swim uponit, and not Sink. So Suppore a Cup, or Wooden Veffel, upon the outward Borders of this Elementary Air, the Cavity of it being filled with Fire, or rather 位thereal Air, it muft Neceffarily upon the fame Ground Remain Swimming , there, and of it Celf

That the Moon may be a World.
can no moreFall, than an Empty Ship can Sink.
'Tis commonly granted, that if there' were a Hole quite through the Center of the Earth, though any Heavy Body (as Suppofe a Milltone ) were let Fall into it, yet when it came unto the place of the Center, it would there reft Immoveable in the Air. Now, as in this Cafe, its own Condenfity, cannot hinder, but that it may Reft in the Open Air, when there is no other Place, to which it thould be Attracted: So neither could it be any Impediment unto it, if it were placed without the Sphere of the Earths Magnerical Vigor, where there fhould be no Attraction at all.

From hence then (Ifay) you may Conceive, that if a Man were beyond this Sphere, he might there ftand as firmly in the Open Air, as now upon the Earth. And if he might Stand there, why might he not alfo Go there? And if fo; then there is a Poffibility likewife of having other Conveniances for Travelling.

And here tis Confiderable, that fince our Bodys will then be Devoid of Gravity, and other Impediments of Motion; we fhall nor atall Spend our felves in any Labour, and fo Confequently not much need the Reparation of Diet : But may perhaps Live altogether without it, as thofe Creatures have done; who by Reafon of their Sleeping for many Days together
1.72 That the Moon may be a World. gether, have not fipent any Spirits, and fo not wanted any Food: which is commonly related of Serpents, Crocodiles, Bears, Coockoes, Swallows, and fucb like. To this Purpore, *Mendeca reckons up divers frrang Relations.; As that of Epimendies, who is Storied to have Slept 75 Years. And another of a Ruftick, in Germany, who being Accedentally covered with a Hay-Rick, Slept there for all Autumn, and the Winther following, without any Nourifhment.

Or, if this will not ferve; yet why may not a Papiff faft fo long, as well as Ignatius or Xaverius? Or if there be fuch a frange Efficacy in the Bread of the Eucharith, as their Miracuilous Relations do Attribute to it: why then, that may ferve well enough, for their Visticum.

Or, if we mult needs Feed upon fome. thing elfe, why may not Smells Nourifh
us? * Plutarch, and * Pliny and Divers. other Ancients, tell us of a Nation in India
${ }^{*}$ De facie
${ }^{2 n}$ Nat: Lifit. that lived only upon Pleafing Odors. And
lib.7.ca.2. 'tis the Common Opinion of Phyfitians, that thefe do ftrangely both Strengthen and Repair the Spirits. Hence was it that Democritus was Able for divers Days together to Feed himfelf with the meer Smel of Hot Bread.

Or if it be Neceffary that our Stomacks mult Receive the Food: why then,' 'tis not Impofible, that the Purity of the Ethe.

That the Mion may be aWorld. 173 real Air, being not mixed with any Improper Vapours, may be fo Agreeable to our Bodys, as to yeeld us fufficient Nourishment; According to that of the Poet;

$$
\therefore----V e f \text { citur aura }
$$

Twas an old Platonick Principle, that there is in fome part of the World fuch a place : where Men might be Plentifuthy Nourifhed, by the Air they Breath : Which cannot more Properly be Affigned to any one Particular, than to the Fthereal Ar above this.

I know ${ }^{\text {tis }}$ the common Opinion, that no Element can prove Aliment, becaufe Arijt.te 'tis not Proportionate to the Bodys of liv- Senfacp.s. ing Creatures which are Compounded. Brit,
r. This 历thereal Air is not an Element ; and thorgh it be purer, yet 'tis perhaps of a greater Agreeablenef to Mans Nastrre and Conftitution.
2. If we confult Experience and the credible Relations of others, we thall find it Probable enongh that many things Receive Nourifhment from meer Elements.

Firlt, for the Earth; * Arifotle and The Eartu *Pliny, thofe two great Naturalifs, itell "HifR ut of fome Creatures, that ave Fod onty Animal.
 Serpent; Ges. 3. I4. Upos thy Belly fhalt tap; 72. thou go, and Deff !halt thous Eat sall whe Days of toby Ljef. ing of Water. * Rondoletius (to whofe Diligence thefe later Times are much beholding for fundry Obfervations concerning the Nature of Aquatils) Affirms, that his Wife did keep a Fifh in a Glars of Water, without any other Food, for Three Years; In which fpace it was Conftantly Augmented, till at firft it could not çome out of the place at which it was put in, and at length was too Big for the Glas it felfe, though that were of a large Capacity. Cardan tells us of fome Worms, that are
Subitil.9. Bred and Nourifhed by the Snow, from which being once Separated, they Dye.

Thus alfo is it with the Air, which we may well Conceive does Chiefly Concur to the Nourifhing of all Vegetables. For if their Food were all Sucked out from the Earth, there muft needs be then, fome fenfible decay in the Ground by them; Efpecially, fince they do every Year rerew their Leaves, and Fruits: which being fo many, and fof often, could not be Produced without Abundance of Nourifhment. To this Purpofe is the Experiment of Trees cut down, which will of themfelves put fourth Sprouts. As alfo that of Onyons, and the Semper-vive, which will ftrangely fhoot Forth, and Grow as they hang in the open Air. Thus likewife is it with fome Senfible Creatures;

That the Moon may be aWorlds; 175. . the Camelions (faith *:Pliny and *Solionts) *Hijf.li.8 is meerly Nourifhed by this: And fo are cap.33. the Birds of Paradife, Treated of by $*$ Poply, 5 for:
 Nature having not beftowediulupon therin Ind.Ociid. any Legs, and therefore chey are never cap. 96 . feen upon the Ground, but being Dead. Majolus If you ask, how they Multiply ? 'Tis Colis Tiskel Anfwered, they lay: their Eggs on the that there Backs of one another, upon which they Birds do Sit till their Young Ones be : Fledg'd. Cheifly re*Rondoletius from the Hiftory of Hermolaus ${ }_{\text {Itide in }}^{\text {Ithereal }}$ Barbarus; tells us of a Prieft (of whom one ${ }_{\text {Air whereal }}^{\text {there }}$ of the Popes had the Cuftody) that Lived they are Forty Years upon meer Air. As alfo of à nourifhed Maid in France, and another in Germany, and upthat for divers Years together did Feed on 1 held. nothing but this: Nay, he Affrms then* De Pifhinfolf had feen one, who Lived that he cibus, ili.1. Yeurs hadeen on, who lived till Ten cap.13. Years of Age, without any other Nouriflment. You may find moft of thefe, and fome other Examples to this purpore, gathered together by Mendoca Viridar. lib: 4. Prob. 23, 24. Now, if this Elementary Air which is mixed with fuccr Impropor Vapors, may Accidentally Nourifh fome Perfons; Perhaps then, that pure Ethereal Air may of it felf be more Na tural to our Tempers.
But if none of thefe Conjectures may Satisfie ; yet there may Happily be fome Poffible means for the Conveiance of other. Food, as fhall be fhewed after. wards.

$$
\mathrm{N}_{2} \quad \text { Again }
$$

176. That the Moon may be a World. - Again, feeing we do not then Spend our felves in any Labour, we fhall not, it may be, need the Refrefhment of Sleep. But if we do, we cannot defire a Softer Bed than the Air, where we may Repofe our felves Firmly and Safely as in our Chambers.
But here you may ask, whether there be any means for us to know, how far this. Sphere of the Earths Vertue does Extend it felf?
I Anfwer, ’ris Probable that it does not reach much farther than that Orb of thick Vaporous Air, that Incompafieth the Earth; becaufe tis likely the Sun may Exhale fome Earthly Vapors, near unto the utmoft bounds of the Sphere alloted to them.
Now there are divers ways ufed by Aftronnmers, to take the alticude of this Vaporous Air. As,
177. By Obferving theheight of that Air which caufeth the Cropuculum, or Twilight; For the finding of which, the Antients ufed this means: As foon as ever they could Difcern the Air in the Eaft to be altered with the leaft Light, they would by the Situation of the Stars find how many Degrees the Sun was below the Horizon, which was ufually about 18 . From whence they would eafily Conclude, how high that Air maft be above us, which the Sun could fhine upon, when he was 18 Degrees

That the Moon may be a World.
18 Degrees below us. And from this Obervation, it was Concluded to be about Vitel..1. 10 52 Miles high.

But in this Conclufion, the Antients were much deceived, becaufe they proceeded upon a wrong Ground, whilft they fuppofed that the fhining of the Suns direct Rays upon the Air, was the only reafon of Crepufoulum; Whereas 'tis certainthat there are Keplar.Ep. many other things which may alfo concur Coper. l. I. to the caufing of it. As, part. 3.
I. Some bright Clouds below the Horizon, which being Illuminated by the Sun, may be the means of conveying fome. Light to our Air, before the direct Rays can touch it.
2. The ofen refraction of the Rays, whichSuffer a Frequent Repercuffion from the Cavity of this Sphere, may likewife yeild us fome Light.
3. And fo may the Orb of enlightened Air compaffing the Sun, part of which mult rife before his Body.
2. The fecond way whereby we may more furely find the Altitude of this groffer Air, is by taking the higheft Clond : which may be done, 1. Either as they ufe to meafure the Altitude of things that cannot be approachedunto, viz. by two Stations, whentwo Perfons fhall at the fame time, in feveral places, obferre the Declination of any Cloud from the Vertical point. Or, Stevinnius: which is the more eafie way, when a Man Geog.l. 3. Thall choole fuch a Station, where he may prop. 2 .

$$
\mathrm{N}_{3}
$$

## That the Moon may be a World:

 at forme diftance; difcern the place on which the Cloud does caft its fhadow, and withal does Obferve, how much both the Cloiid and the Sun decline from the Vertical point. From which he may eafily conclude the true Altitude of it, as you may more plainly conceive, by this follow. ing Diagram.

Where $A B$ is a perpendicular from the Cloid, $C$ the Station of him that Meafures, $D$ the place where the fhadow of the Cloudd does fall.
The Inftrument being directed from the Station $C$, to the Cloud at $A$, the perpendicular will thew the Angle $B A C$. Then leting the Sun thine throngh the Sights of your Inftrument, the perpendicular of it
will give the Angle $B A D$. Afterwards having meafured the diftance $C D$ by pa-Pitijc. Trices, you may according to the commongon. Rules, find the height $B A$.

But if without making the Obfervation, you would know of what Altitude the higheft of thefe are found by Obfervation; * Cardan anfwers, notabove Two Miles; * *subt.l.

Keplar, notabove 1600 Paces, or thereabouts. ${ }^{17 \%}$
3. Another way to find the height of ${ }^{*}$ Epit.Cothis Vaporous Air, is, by knowing the per.l. $1 . \frac{1}{}$. difference of Alcitude, which it caufeth, in refracting the Beams of any Star near the Horizons. And from.this Obfervation alfo, it is ufually concluded to be about Two or Three Miles high.

But now you mult not conceive, as if the Orb of Magnetical Vigor, were bounded in an exact Supericies, or, asif it did equally hold out juif to fuch a determinate Line, and no farther. But as it hath been faid of the firft Region, which is there terminated, where the Heat of Reflection does begin to Langnifh: So likewife isit probable, that this Magnetical Vigor does Remit of its degrees proportionally to its diftance from the Earth, which is the caule of it: And therefore though the thicker Clouds may be Elevated no higher, yet this Orb may be continued in weaker degrees a little beyond them. We will fuppofe it ( which in all likely-hood is the molt ) to be about Twenty Miles high. So that you fee the former Thefis remains probable:

$$
\mathrm{N}_{4}, \quad \text { that }
$$

230 That the Moon may be a World.:
that if a Man could but Fly, or by any $o$ ther means get Twenty 'Miles upwards, it were poffible for him to reach unto the Moon.
But it maỳ be again Objeđed: Thongh all this were true ; though there were fucti an Orb of Air which did terminate the Earths Vigour : And though the heavynefs of our Bodies rould not hinder our paliage, through the vaft fpaces of the \#therial Air ; yet thofe two other Impediments may feem to deny the poffibility of any fuch Voyage.
x. The extream collinefs of that Air. If fome of our higher Mountains for this reafon be not habitable ; much more then will thofe places befo, which are farther from any caure of Heat.
2. The extream thinnefs of it, which may make it unfit for Expiration. For if in lome Mountains (as Arifotle tells us of

* InGer. Olympus, and out him *S. Auftin) the Air adliteram. be fo thin that Men cannot draw their l.3.cap. 2. Breath, unlefs it were through fome moiftned Spunges; much more then muft that Air be thin, which is more re. motely Situated from the caufes of Impurity and Mixture. And then befide, the Refraction that is made by the Vaporous Air incompaffing our Earth, may fufficiently prove that there is a great difference betwixt the IEtherial Air and this, in retpect of Rarity.

To the firft of thefe lanfwer, that though thẹ

## Tha the Moon may be a World.

the fecond Region, be naturally endowed with fo much Coldnefs as may make it fit for the Production of Meteors; yet it will not hence follow, that all that Air above it, which is not appointed for the like purpofe, fhould partake of the fame Condition: But, it may feem more probable that this Ethereal Air, is freed from having any quality in the extreams. And this may be confirmed, from thofe Common Arguments, which are ufially brought so prove the warmnefs of the Third Region. As you may fee in * Fromurdus, and others who Treat of that Subject.
${ }^{\prime}$ 'is the Alfertion of Pererius, that the Comment. fecond Region, is not cold meerily for this inGemn. 8 . reafon; becaufe it is diftant from the Ordinary caufes of Heat, but becaufe it was actually made fo at the firf, for the Condenfing of the Clounds, and the Production of other Meteors that were there to be generated; which (as I conceive) might be Sufficiently confirmed from that Order of the Creation-Obferved by Mofes, who tellus that the Waters above the Firmament (by which, in the greateft probability, we are to underttand the Cloudsin the fecond Region) were made the fecond day, Gers. r. 7,8. Whereas the Sun it felf (whofe Reflection is the caufe of Heat) was not Created till the Fourth Day; ver.16. I9.
To the other Objection, I Anfwer, that though the Air in the fecond Region ( where by reaton of its coldnefothere are many thick

182 That the Moon may be a World. thick Vapours ) do caufe a great Refraction; yet 'tis probable that the Air which is next the Earth, is fometimes, and in fome places, of a far greater thinnefs, nay;
 fometimes there is fuch a fpecial Heat of the Sunt, as may Rarifie it in an Eminent degree; And in fome dry places, there are no grofs impure Exhalations to mix with it.
But bere it may be Objected. If the Air in the fecond Region were more Condenfed and heavy than this wherein we Breath, then that murf neceffarily tend downwards and poffefs the lower place.
To this fome Anfwer, That the hanging of the Clouds in the open Air, is no lefs thana Miracle. They are the Words of Hffl! 3 I. Pliny. 2uid mirabilius aquis in celo fatanticap. 1. bus? what more wondertul thing is there than that the Waters fhould fland in the Heavens? Others prove this from the Derivation of the word from שמחה fu. pefcere and aid aque: Becaure the Waters do hang there affer fich a flupendous inconceivable manner; Which feens likewife to be favoured by Scripture, where "tis mentioned asa great Argument of Gods Omnipotency, that be holds up the Clouds from falling.' He binds up the Waters in bis job. 26. 8: thick Cloulls, and the Cloud is not rest under them.

But that which unto me feems full Satisfaction ageaint this doubt, is this Con-

## That the Moon may be a World.

Confideration; that the Natural Vigor, whereby the Earth does attract Denfe Bodies unto it, is lefs Efficacious at a diftänce: and therefore a Body of lefs Denfity, which is near unto it, as fuippofe, this thin Air wherein we breath, may Naturally be lower in its Scituation,thán another of a greater Condenfity that is farther of; asfuppofe, the Cloids in the fecond Region: And though the one be abfolutely, and in it felf more fit for this Motion of Defcent ; yet, by reafon of its diftance, the Eartlis Magnetical Vertue cannot to Powerfully work upori it.

As for that Relation of Arifotete; If it were true; yet it does not prove this Air to be altogether impooffible, fince moiftened Spunges might help uis againft its thinnefs: But tis more likely, that he took it upon Truft, as he did fome other Relations concerning the height of theMountains, wherein 'tis Evident, that he was grofly miftaken. As where he tells us of Caucafiss, that it Meteor. caft its fhadow 560 Miles. And this Rela- M.1.c..II. tion being of the fame Nature, we cannot fafely truft unto him for the Truth of it.
If it be here enquired; what means there may be Conjectured, for our afcending beyond the Sphere of the Earths Magnetical Vigor.

I Anfwer, r. 'Tis not perhaps impoflible, that a Man may be able toFly, by the Application of Wings to his own Body ; As Angels are Pictured, as Mercury and Deeda-

## That the Moon masy be a World.

lus are feigned, and as hath been attempted by divers, particulary by a Turk in Conftantinople, as Busbequius Relates.

Mr.Burtont. Melanch. pa.2.eeft.2. mem. 3.
2. If there be fuch a great Ruck in Madagafcar, as * Marcus Polus the Venetian mentions, the Feathers in whofe Wings are *Lib.3. c. Horfe and his Rider, or, an Elephant, as 40. our Kites do a Moufe; why then 'tis but

Teaching one of thefe to carry a Man, and he may Ride up thither, as Ganymed does uponan Eagle.
3. Or if neither of thefe Ways will ferve: Yet I do ferioully, and upon good Grounds, affirm it poffible to make a Flying Chariot. In which a Man may fit, and give fuch a Motion untoit, as fhall convey him through the Air. And this perhaps might be made large enough to corry divers Men at the fame time, together with Food for their Viaticum, and Commodities for Traffique. It is not the bignefs of any thing. in this kind, that can hinder: its Motion, if the Motive Faculty be anfwerable thereunto. We fee a great Ship Swims as well as a fmall Cork and an Eagle Flies in the Air as well as a litule gnat.

This Engine may be contrived from the fame Principles by which Archytas made a wooden Dove, and Regismontanus a wooden Eagle.

Iconceive it were no difficult matter (if a Man had leifure ) to fhew more particularly; the means of compoling it.

## That the Moon may be a World.

The perfecting of fuchan Invention, would be of fuch excellent ufe, that it were enough, not only to make a Man Famous, but the Age alfo wherein he Lives. For befides the ftrange difcoveries that it might occafion in this other World, it would be alfo of inconceivable advantage forträvelling, above any other Conveiance that is now in ufe.

So that norwithftanding all thefe feeming impoffibilities, tis likely enough, that there may be a means invented of Journying to the Moon; And how happy fhall they be, that are tirft fucceffful in this attempt?
-----Falicefque anima, guas nubila fupri, Et turpes fumos, plenumque vaporibus orbem, Inferuit calo fancti fcintilla Prometbei.

Having thus finifhed this Difcourfe, I chanced upon a late fancy to this purpofe under the fained Name of Domisigo Gonfales, written by a late Reverend and Learned Bifhop: In which (befides Sundry particulars wherein this later Chapter did un. wittingly agree with it) there is delivered a pleafant and well contrived Fancy concerning a Voyage to this other World.

He Suppofeth that there is a Natural and ufual Paffage for many Creatures betwixt our Earth and this Plannet. Thus he fays; thofe great Multitudes of Locufts wherewith divers Countries have bin Deftroyed, do Proceed from thence. And if we Perufe the Authors who Treat of them, we thall find that many times they Fly in

186 That the Moon may be a World.
Numberlefs Troops, or Swarms, and for fundry Days together before they Fall, are feen over thofe places in great high Clouds; fuch as coming nearer, are of Extenfion enough to Obfcure the Day, and hinder the Light of the Sun. From which; together with divers other fuch Relations, he Concludes, that 'tis not altogether Improbable, they fhould proceed from the Moon. Thus likewire he Suppofeth the Swallows, Cuckoes, Nightingales, with divers other Fowl, which are with us only half a Year, to Fly up thither, when they go from us. Amongft which kind, there is a Wild Swan in the EaftIndies, which at certain Seafons of the Year do Conftantly take their Elight thither. Now this Bird being of a great Scrength, able to Continue for a long Elight, as alfo going ufually in Flocks, like our Wild, Geefe; he Suppoferh that many of them together, might be thought to carry. the Weight of a Man; efpecially, if an Engine were fo Contrived (as he thinks it might) that each of them fhould Bear an equal thare in the Burden. So that by this means, 'tis eaffly Conceiveable, how once every Yeara Man might Finifh fuch a Voyage; gôing along with thele Birds at the beginning of Winter, and again. Returning with them at the Spring.

And here, One that had a flrong Fancy, were better Able to fet forth the grear Benifit and Pleafure to be had by fuch a Journey

That the Moon may be a World.
Journey. And that whether you Confider the Strangenefs of the Perfons, Language, Art, Policy, Religion of thore Inhabitants, together with the new Traffick that might be brought thence. In Brief, do but Confider the Pleafure and Profit, of thofe later Difcoveries in America, and we muft needs Conclude this to be Inconceiveably beyond $i$.
But fuch Imaginations as thefe, II fall leave to the Fancy of the Reader.

# DISCOURSE <br> Concerning a Rew 急lant, 

Tending to prove.
That 'tis probable our EARTH is one of the PLANETS.

The secana 2book.
By Fobn Wilkins, late L. Bifhop of Chefter.

Digna res eft Contemplatione, ut foiamus in quo rerum ftats fcimus : pigerimam fortiti, an velocifinmam fedem: circa nos Deus omnia, an nos agat. Sen. Nat. Queft. lib. 7. cap. 2.

> LONDON:

Printed by F. D. for Fobn Gellibrand, at the Golden Ball in St. Paul's ChurchYard. M.DC.LXXXIV.

## In the alatader.

 are every day pre . or an $\angle$ pologie, why this was publifhed amongit the reft (the ulual Matter for fuch kind of Epifles): Let me in brief preadmonifh you fomething concerning the chief Scope and Manner of this following Difcourfe.1. 'Tis not the purpofe of it, to fet down an exact Treatife of this kind of Aftronomy ; but rather to remove thofe common Prejudices, which ufually deter Men from take ing any Argument tending this way, into their confiderations. For we may obletve, that in thole Points which are cried down by the more

A 2 general

## To the Rearet.

general Opinion, Men do for the moft part reft themfelves in the fuperficial knowledg of things, as they feem at their firft appearances, thinking they can fay enough to any Paradox againft which they can urge the moft obvious and eafy Objections ; and therefore feldom or never fearch into the depth of thefe Points, or enter into any feri-- ous impartial examination of thofe grounds on which they are botcom'd. Which as it muft needs be a great hindrance to the proficiency of all kind of Learning; fo more efpecially is it in this particular. We might difcern a greater comeliners and order in this great Fa brick of the World, and more eafily underttand the Appearances in Aftronomy, if we could with indifferency attend to what might be faid for that Opinion of Copernicus, which is here defended.

## Ca the Readet:

2. For the Mañer, It is not maintained with fuch Heat and Religion, as if every one that reads it,were prefently bound to yield up his affent: But as it is in other Wars, where Victory cannot be had, Men muft be content with Peace: So likewife is it in this, and fhould bein all other Philofophical.Contentions. If there be nothing able to convince and fatisfy the indifferent Reader, he may ftill enjoy his ownOpinion. All Men have not the fame way of apprehending things; but according to the variety of their Temper, Cuftom, and Abilities, their Underftandings are feverally fafhioned to different Affents: Which had, it been but well conlidered by fome of our hot ${ }^{*}$ Adver- "Fromond. faries, they would not have fhewed ${ }^{A l}{ }^{\text {Rofje. }}$. more violence in oppofing the. Perfons againft whom they write, than ftrength in confuting the Caufe.
'Tis

To the Reater.
'Tis an excellent Rule to be'ob. ferved in all Difputes, That Men Thould give foft Words and bard Arguments; that they would not fo much ftrive to vex, as to convince an Enemy. If this were but diligently practifed in all Cafes, and on all fides, we might in a good mealure be freed from thofe Vexations in the fearch of Truth, which the wife Solomon, by his own experience did fo much complain of: Ecclef.1.18. In much Wifdom there is much Griéf; and be that increafeth Knowledg, increafetl, Sorrow.
To conclude : Tho there fhould be nothing in this Difcourle conducible to your Information and Benefit; yet it may ferve in the Perufal, as it did in the Compofure, for the recreation of fuch leifure hours, as may conveniently be fpared from more weighty Enployments. Farewel.

The

The Propositions that are infifted on in this Difcourfe.

## PROP. I.

THat the feeming Novelty and Singularity of this Opinion, can be ne Jufficient Reafon to prave it Erroneus.

## PROP. II.

That the places of Scriptire, which Seem to intimate the Dilurial Motion of the Swn or Eleavens, are fairly capable of another interpretation.

## PROP. IL.

That the Haly Ghoft, in maky places of Scripture, does plainly conforma bis Expreflions to the Error of our Conceits, and does not Jpeak. of fundry things ass thy are in themfelves, but as they appear istro us.

## PROP. IV.

That divers learned Men bave fallen into great Abfirditites, whilf they bave looked for the Grounds of Philofophy from the Words of
Scripture.
$\mathrm{P} \mathrm{R} O \mathrm{O}$.
That the mords of Scripthee, in their proper
and

## The Table.

and ftritt conftrution, do not axy where affirm the Immobility of the Earth.

PROP. VI.
That there is not any: Argmment from the words of Scripture, Principles of Nature, or Obfervations in Aftronomy, which can Sufficiently evidence the Earith so be th the Centre of the llniverfe.

$$
\mathrm{PROP}=\mathrm{VII}
$$

'Tis probable that the Sum is in the Centre of the World.

> P R O P. VIII.

That there is not any fufficient reafon to prove the Earth incapable of thafe Motions which Copernicus afcribes unto it.

> PROP IX

That it is more probable:the Earth does nove, than tbe Heavens:

PROP. X.
That this Hypothefis is exaflly agrecable to cosumon Appearances.

## That the Earth may be a Planet.

 and Opinion of others, and then afterwards to defcend unto the Reafons that may be drawn from the Nature-and Effence of the things themfelves:: Becaufe thefe inartificial Argurtients (as the Logicians call them) do not carry with them any clear and convincing evidence; and therefore fhould come after thofe that are of more necefliary dependance, as ferving rather to confirm, thannrefolve the Judgment.But yet, fo it is, that in thofe points which are befides the common Opinion, men are carried away at the firft by the general cry, and feldom or never come fo far as to examin the reafons that may be urged for them. And therefore, fince it is the purpofe of this difcourfe to remove thofe prejudices which may hinder our Judgment in the like cafe, 'tis requifit that in the firft place there be fome fatisfaction given to thofe Arguments that may be taken from the Authority of others.

Which Arguments are infifted on by our adverfaries with much heat and violence.

What (fay they) fhall an upfart Novelty thurft cut fuch a Truth as liath paffed by ficceffive tradition through all Ages of the World? And hath been generally entertained, not only in the Opinion of the vulgar, Reff. de but alfo of the greareft Philofophers and Terris moft Learned Men ? ${ }^{*}$ Shall we think that moth, con${ }^{\text {tra Lansb. }}$ liv. I. eft.I. ral times bave been eminent for new invencap 10 . tions and ftrange difcoverics, there was none

## That the Earth may be a Planétio

able to find out fuch a Secret as this; befides rome fabulous Pytbagorians, and of late Copervicus? Is it poffible that the World fhould laft for above five thoufand years together, and yet the Inhabitants of it be fo dull and ftupid, as to be unacquainted with its motion? Nay, fhall we shink that thofe excellent Men, whom the Holy Ghoft made ufe of in the penning of Scripture, who were extraordinarily infpired with fupernatural Truths, fhould notwithftanding be fo grofly ignorant of fo common a matter as this? Can we believe, if there were any fuch thing; that $F_{0}$ Juah, and $\mathrm{Fob}_{0}$, and David, and Soloi mon, \&c. fhould know nothing of it? Certainly it muft needs argue a ftrong affectation of Singularity, for a Man to take upany groundlefs fancy againft fuch antient and general Authority.

I anfwer : As we fhould not be fo fondly conceited of our felves, and the extraordina-: ry Abilities of thefe prefent Ages, as to think every thing that is antient to be abfolute: Or, as if it muft needs be with Opinions, as it is with Clothes, where the neweft is for the moft part beft. So neither fhould we be fo fuperfitioully devoted to Antiquity, as to take up every thing for Canonical, which drops from the pen of a Father, or was approved by the confent of the Anfents. 'Tis

 one in the fearch of Truth;always to preferve a Philofophical liberty : Not to be fo inflaved ever he fays to be infallible. We muft labour to find out what things are in themfelves by our own experience, and a through examination of their. natures, not what.another fays of them. And if in fuch an impartial enquiry, we chance to light upon a new way, and that which is befides the common rode, this is neither our fault, nor our unhappineff.
Not our fault,becaufe it did not arife from Singularity or Affectation. Not our unhiappinefs, becaufe it is rather a Priviledge to be the firt in finding out fuch Truths, as are not difcernable to every common eye. If Novelty fhould always be rejected, neither would Arts have arrived to that perfection wherein now we enjoy them; nor could we ever hope for any future reformation : Though all Truth be in it felf Eternal; yet in refpect of Mens Opinions, there is fcarce any fo antient, but had a beginning, and was once accounted a Novelty; and if for this reafonit had been condermned as an errour, what a general darknefs and ignorance would then have been in the World, in comparifon of that lighe which now abounds; according to that of the Poet:

* Horat.
* Aucd $\operatorname{Litam}$ Lintiquis Navitas invifa fuifet, 3ib.2.cp.I. Quamablisquid namac effet vetzos aut quid baberets Qumod legcicint terecitg; vinistim pablicusufus?

If our Forefathers had but hated thus, All that were new, what had been old to us?

That the Earth may,be aplanet.
Or, how might any thing confirmed be, For publlck ufe, by its Antiqnity ?

But for more full fatisfaction of all thore fcruples that may arife from the feenning Novelty or Singularity of this Opinion, I fhall propofe thefe following confiderations.
Suppofe it were a Novelty : Yet 'cis in Conjid. i. Pbilofophy, and that is made up of nothing elfe; but receives addition from every days experiment. True indeed, for Divinity we have an infallible rule that do's plainly inform us of all necelfary Truths; and therefore the Primitive Times are of greater Authority, becaure they were nearer to thofe holy Men who were the Pen-Men of Scripture. But now for Philofophy, there is no fich reafon: What ever the SchoolMen may taik; yet Ariffotles works are not neceflarily true, and he himfelf hath by fuf, ficient Arguments proved himfelf to be liable unto errour. Now in this cafe, if we fhould fpeak properly, Antiquity do's confift in the old age of the World, not in the youth of it. In fuch Learning as may be increafed by freth experiments and new difr coveries: 'Tis we are the Fathers, and of more Authority than former Ages ; becauife we have the advantage of more tine than they had, and Tructh (we fay) is the Daughter of Time. However, there is nothing in this Opinion to Magifterially propofed, but the Reader may "ufe his own liberty; and if all the reafons confidered together,
do not feem convincing untó him, he may freely reject it.
In thofe natural points which carry with them any doubt or oblcurity, it is the fafert way to furpend our afients: And though we may difpute pro or con; yet not to fettle our Opinion on elther fide.
Confid. 2. In weighing the Authority of others P tis not their multitude that hould prevail, or their skill in fome things that fhould make them of credit in every thing, but we fhould examine what particular infight and experience they had in thofe times for which they are cited. Now 'tis plain, that Common People judge by their fences; and therefore, their voices are altogether unfit to decide any Philofophical doubt, which cannot well be examined or explained without Difcourfe and Reafon. And as for the antient Fathers, though they were Men very eminent for their holy lives and extraordinary skill in Divinity ; yet they were molt of them very Ignorant in that part of Learning which concerns this Opinion, as appears by many of their grofs miftakes in this kind, as that concerning the Antipodes, \&c. and therefore it is not their Opinion neither, in this bufinefs, that to an indifferent feeker of Truth will be of any ftrong Authority.
4 Alex.
But againft this it is * objected, that the inftance of the Antipodes do's not argue any fpecial Ignorance in there Learned Men: Or, that they had lest skill in fuch human Arts than

That the Earth may be a Planet.
than others ; fince Arifotle himelf, and Pli$n y$, did deny this as well as they. I anfuer:
r. If they did, yet this do's make more to the prefent purpofe: For if fith grear Schollars, who were fo eminent for their knowledge in natural things, might yet notwithltanding be grofly miftaken in fuch matters as are now evident and certain : Why then we have no reafon to depend upon their affertions or Authorities, as if they were infallible.
2. Though thefe great Naturalifts, for want of fome experience were miftaken in that Opinion, whileft they thought no place was habitable but the temperate Zones; yet it cannot be from hence inferred, that they denied the poflibility of $A n t i p o d e s:$ Since there are fuch Inhabitants as live oppofite unto us in the other temperate Zone; and 'twere an abfurd thing to imagin that thofe who lived in different $Z$ ones, can be Antipodes to one another; and argues that a Man did not underftand, or elfe had forgotten that common diftinction in Geograpby, wherein the relation of the Worlds Inhabitants unto one another, are reckoned up under thefe three heads; Antaci, Pcrieci, and Antipodes. But to let this pafs: 'Tis certain,that fome of the Fathers did deny the being of any fuch, upon other more abfurd grounds. Now if fuch as Cbry fofom, Lactantius, \&c. who were noted for great Schollars, and fuch too as flourifhed in thefe latter times, when all human Learning was

## That the Earth may be a Planet.

 more generally profeft, fhould notwithfand, ing be fo much miftaken in fo obvious a mat. ter: Why then may we not think that thore Primitive Saints, who were the Pen-Men of Scripture, and eminent above others in their. time for Holinefs and Knowledge, might yet be utterly Ignorant of many Philofophical Truths, which are commonly known in thefe days? 'Tis probable, that the Holy Ghoft did inform them only with the knowledge of thofe things whereof they were to be the Pen-Men, and that they were not better skilled in points of Philofophy than others. There were indeed fome of them who were fupernaturally indowed with human Learning; yet this was, becaufe they might thereby be fitted for fome particular ends, which all the reft were not appointed unto: Thus Solomon was Atrangely giffed with all kind of knowledge, in a great meafure, becaufe he was to teach us by his own experience theEccl.1. 18. extreme Vanity of ir, that we might not fa fettle our defires upon it, as if it were able to yield us contentment. So too the Apoftles were extraordinarily infpired with the knowledge of Languages, becaufe they were to preach unto all Nations. But it will not hence follow, that therefore the other Holy Pen-Men were greater Schollars than others. TTis likely that $\mathcal{F}$ b had as much human Learning as moft of them, becaule his Eook is more efpecially remarkable for lofty expeeffions, and difcourfes of Nature; and yet 'tis not likely that he was acquainted

That the Earth may be a Planet.
with all thore myfteries which later Ages have difcovered ; becaufe when God would convince him of his own Folly and Ignorance, he propofes to him fuch queftions, as to him were altogether unanfwerable; which notwithftanding, any ordinary Philofopher in thefe days might have refolved: As youmay fee at large in the thirty eighth Chapter of that Book.
The occafion was this : Fob having * be- *Cap.13.3. fore defired that he might difpute with the Almighty concerning the uprightnefs of his own ways, and the unreafonablenefs of thofe afflictions which he underwent, do's at length obtain his defire in this kind; and God vouchfafes in this thirty eighth Chapter, to argue the cafe with him. Where he do's Thew Job how unfit he was to judge of the ways of Providence, in difpofing of Bleflings and Afflictions, when as he was fo Ignorant in ordinary matters, being not able to difcern the reafon of natural and common events. As $\dagger$ why the Sea fhould be fo boun- $\dagger V .8$. ro, ded from overtlowing the Land? What is Ir. the* bredth of the Earth? What is the trea- * Ver. is. fon of the Snow or Hail? What was the $t \mathrm{VFr}$ r. 22. * caufe of the Rain or Dew, of Ice and Froft, ${ }^{*} V .28 .29$. and the like. By which queftions, it feems Hob was to utterly puzled, that he is fain afterwards to humble himfelf in this acknowledgment: * I bave uttered that I maderffood * C. $4^{2.3}$ not, things too wonderful for me, which I knew not: Wiserefcre I abbor my Self, and repent in duf aved ahes.

## That the Earth may be a Planet.

So that 'tis likely thefe Holy Men had not thefe humian Arts by any fecial infpiration, but by inftruction and ftudy, and other ordinary means; and therefore Mofes his skill in this kind is called the Learning of the $E$ -
14is 7.22.gyptians. Now becaufe in thofe times all Sciences were taught only in a rude and imper. fect manner; therefore 'tis likely that they alfo had but a dark and confure apprehenfion of things, and were liable to the common errours. And for this reafon is it, why *

- 7ofoca. Toffatus (fpeaking of Jofhiuas bidding the

10. Ruef. Moon fand ftill as well as the Sun) fays
11. 2uod forte erat imperitus circa Aftrorum doctriprm; fentiens sut vulgares fentiunt:That perhaps he was unskilful in Aftronomy, having the fame grofs conceit of the Heavens, as the vulgar had. Fromall which it may be inferred, that the Ignorance of fuch good Men and great Schollars concerning thefe Philofophical points, can be no fufficient reafon, why after examination we fhould deny them, or doubt of their Truth.
Confid. 3. 'Tis confiderable, that in the rudiments and firft beginnings of Aftronomy, and fo in feveral Ages after, this Opinion hath found many Patrons, and thofe too Men of eminent note and Learning. Such was more efpecially Pythagoras, who was generally and highly efteemed for his divine wit, and rare inventions; under whofe myfterious fayings, there be many excellent Truths to be difcover. ed.

But againft his Teftimony, it is again $\dagger$ objected;

That the Earth may be a Planet:
$\dagger$ objected; If Pythagoras were of this Opi- $\dagger$ Alex. nion, yet his Authority fhould not be of any Rof: $1.2 . \mathrm{fe}_{0}$ credit, becaufe he was the Author of many ${ }^{2 . c .10}$. other monftrous abfurdities.

To this I anfwer: If a Manserrour in fome particulars fhould take away his credit for every thing elfe, this would abolifh the force of all human Authority ; for bumanum eft errare. Secondly, 'tis probable that many of Pythagoras's fayings which feem fo abfurd, are not to be underftood according to their letter, but in a myftical fenfe.
2. But he objects again, that Pythagoras was not of this Opinion; and that for two reafons: Firft, becaufe no Antient Author that he had read afcribesit unto him. Secondly, it is contradictory to his other Opinions, concerning the Harmony that was made by the motion of the Heavens; which could not confift with this other of the Earth's motìn.
To the Firft I anfwer: The Objector could not chufe but know that this affertion is by many Antient Authors afcribed to that fect, whereof Pythagoras was the chief. He might have feen it exprefly in * Ariffotle himfelf: * De Cata

In which the Philofopher do's compendioufly reckon up the three chief particulars implyed in the Opinion of the Pytbagorians. Firft, the Suns being in the Centre of
the World. Secondly, the Earth's annual motion about it, as being one of the planets: Thirdly, its diurnal revolution, whereby it caured day and night.
-To his fecond reafon I anfwer : Firf, that Pythagoras thought the Earth to be one of the Planets (as appears by Arifotles Tentimony concerning him) and to move amonglt the reft. So that bis Opinion concerning the motion of the Heavens, is not inconfiftent with that of the Earth. Secondly, but as for the Coeleftial Harmony, he might perhaps under this myftical expreffion, according to his ufual Cultom, fhadow forch unto us that mutual proportion and Harmonical content, which he did conceive in the feveral bignefs, diftance, motions of the Orbs. So that notwithftanding thefe objections, it is evident that Pythagoras was of this Opinion, and that his Authority may add fomewhat for the confirmation of it. Unto $\ddagger$ Archime- him affented * Arijtarcbus Samius, who fourides de are-
nanymero. nannmero. Saviour, and was by reafon of this Opinion, arraigned for Prophanefs and Sacriledge by the Areopagites, becaufe he had blarphemed the Deity of Vefta, affirming the Earth to move. To themagreed Pbillolaus, Heraclides, Pontizus, Nicetas, Syracisfanus, Ecpbantas, Luscippis, and Plato himfelf (as fome think.) So likewife Numa Poripilius, as Plutarch relates it in his Life ; who in reference to this:Opinion, built the Temple of $V$ efta round, like the Univerfe: In the middle of it was placed the perpetua]

## That the Eartbinay be a Planet.

perpetual veftal Fire; by which he did reprefent the Sun in the Centre of the World. All thefe Men were in their feveral times of fpecial Note, as well for their extraord?nary Learning as for this Opinion.
'Tis confiderable, that fince this Science of 4 . Conjid: Aftronomy hath been raifed to any perfection, there have been many of the beft skill in it, that have aflented unto that aflertion which is here defended. Amongit whom was the Cardinal Cufanes, but more efpecially Coper- De doaza nicus, who was a Man very exact-and dili- ignor.lib. 2 . gent in thefe itudies for above $3^{\circ} 0^{\circ}$ years toge- catp 12 . ther, from the year 1500 . to 1530 . and upwards: And fince him, moft of the beft Aftronomers have been of his fide. So that now, there is fcarce any of note and skill, who are not Copernicus his followers, and if we fhould go to moft voices, this Opinion would carry it from any other. It would be too tedious to reckon up the names of thofe that may be cited for it ; I will only mention fome of the chief: Such were Foachimus Rheticus, an elegant Writer, Cbrifopherws Rothman, Meflim, a Man very eminent for his fingular skill in this Science; who though at the firt he were a follower of Ptolcmy, yet upon his fecond and more exact thoughts, he concluded Copirnicus to be in the right, and that the ufial Hypothefis, * prosfripticie P Pref. ab potius quaim ratione vallet, do's prevail more nirrat. by prefcription then reafon. So likewife $E$ - Rbetici. rafmus Reinboldus, who was the Man that calculated the Prutenical Tables from Cuper-

## That the Earth may be a Planet.

 a Commentary upon his other Works, but that he was taken out of this Life before he could finifh thofe refolutions. Unto there alfo I might add the names of Gilbert, Keplar, Gallildeus, with fundry others, who have much beautified and confirmed this Hypotbefis, with their new inventions. Nay I may fafely affirm, that amongit the variety of thofe Opinions that are in Affronomy, there are more (of thofe which have skill in it) that are of this Opinion, not only than any other, but than all the reft put together. So that now it is a greater Argument of Singularity tos. Confid.
'Tis probable, that many other of the Antients would have affented unto this Opinion, if they had been acquainted with thofe experiments which later times have found out for the confirmation of it: And there* In Nar- - fore * Rbeticus and $\dagger$ Keplar do fo often wifh ratione. that Arijotle were now alive again. Quelti$\dagger$ Myff.Cof onlefs he was fo rational and ingenious a mogr.cap.I. Man (not half fo obftinate as many of his Item fref.
ad 4 .. Afr. Copern. thefe, he would quickly have renounced his ownPrinciples, and have come over to this fide: de Call..2. queftions about the Heavens, which weme not eafie to be retri. He fers dich were rule that in difultes. Man mayn this liberty to foeak difficulties, a Man may take a Iy to him: And in fuch cafes, an aptnefs to guefs at fome refoltion, for the fatisfying
of our Philofophical thirft, do's deferve rather to be ftiled by the namie of Modefty, than Boldnefs. And in another place, he refers the Reader to the different Opinions Met. lib. of Aftronomers, advifing him to examin their $12 . c a p, 8$. feveral tenents, as well Endoxus as Calippus; and to entertain that (not which is moit antient, but) which is moft exact and agreeable to reafon. And as for Ptolomy, tis his Alm. liv. counfel, that we fhould endeavour to frame $13 . c a p .2$. fuch fuppofitions of the Heavens, as might be more fimple, being yoid of all fuperfluities : And he confefles, that his Hyporbejis had many implications in it, together with fundry intricate and unlikely turnings; and therefore in the fame place, he feems to ad. monifh us, that we fhould not be too confident the Heavens were really in the fame Form, wherein Aftronomers did fuppofe them. So that 'ris likely, 'twas his chief intent to propofe unto us fiich a frame of the Coeleftial Bodies, from which we might, in fome meafure, conceive of their different ap. pearances; and according to which, we might be able to calculate their motions. But now, 'tis Copervicus his endeavour, to propound unto us, the true natural Gaufes of thefe feveral Motions, and Appearances: It was the intent of the one, to fectle the Imagination; anid of the other, to fatisfie the judgment. So, that we have no reafon to doubt of his affent unto this Opinion, if he had but clearly underitood all the grounds of it.
${ }^{\circ} \mathrm{T}$ is
'Tis reported of Clavius, that when lying upon his Death-bed, he heard the firft News of thofe Difcoveries which were made by Gallileus his Glafs, he brake forth into thefe words: Videre Aftronomos, guo pacto conffituendi funt orbes Caleffes, trt bac Pbanomena Salvari poffint: That it did behove Aftronomers, to confider of fome other Hypotbefis, befide that of Ptolomy, whereby they might falve all thofe new appearances. Intimating that this old one, which formerly he had defended, would not now fetve the turn: And doubtlefs, if it had been informed how congruous all thefe might have been unto the Opinion of Copernicus, he would quickly have turned on that fide. 'Tis confiderable, that amongft the followers of Copernicus, there are fcarce any, who were not formerly againt him ; and fuch, as at firft, had been throughly fearoned with the Principles of Arifote; in which, for the moft part, they have no lef's skill, than thofe who are fo violent in the defence of then. Whereas on the contrary, there are very few to be found amongft the followers of Arijfote and Ptolomy, that have read any thing in Copernicss, or dofully underftand the Grounds of his Opinion ; and I think, not any, who having been once fetled with any ftrong affent on this fide, that have afterwards revolted from it. Now if we do but feriounly weigh with our felves, that fo many ingenious, confidering Men, fhould seject that Opinion which they were nurled up in, and which is gencrally approved as the Paradox à is condemned in Schools, and commionly cried down, as being abfurd and ridiculous: I fay, If a Man-do but well confider all this, he mult needs conclude, that there is fome ftrong evidence for it to be found out by examination; and that in all probability, this is the righter fide.
'Tis probable, that moft of thofe Authors 7.Corfid: who have oppofed this Opinion, fince it hath been confirmed by new Difcoveries ${ }_{2}$ were firred up thereunto by fome of thefe three infufficient Grounds.

1. An over-fond and partial conceit of their proper Inventions. Eviery Man is naturally more affected to his own Brood, than to that of which another is the Author; though perlhaps it may be more agreeable to reafon. 'Tis very difficult for any one, in the fearch of Truth, to find in himfelf fuch an indifferency, as that his Judgment is not at all fway'd, by an overweening affection unto that which is proper unto himfelf. And this perlaps might be the firft reafon that moved the noble Tycho, with fo much heat, to oppofe Copernicus, that fo he might the better make way for the fpreading of that Hypothefis, which was of his own invention, To this I might likewife refer that. Opinion of Origatius, and Mr. Carrenter, who attri-. bute to the Earth, only a diurnal Revolu:tion. It does more efpecially concern thofe Men thàt are Leaders of feveral fides, to beat down any that flould opiofe them.
truth ;
2. A fervile and fuperftitious fear of derogating from the Authority of the Ancients, or oppofing that meaning of Scripture phrafes, wherein the fuppofed infallible Church, hath for a long time undertood them. 'Tis made part of the new Creed, fet forth by $P$ itis the Fourth, 1564. That no Man fhould aflent unto any interpretation of Scripture, which is not approved of by the Authority of the Fathers. And this is the reafon why the Jefuits, who are otherwife the greateft affectors of thofe Opinions, which feem to be netw and fubtil, do yet forbear to fay any thing in defence of this; but rather take all occafions to inveigh a-

ass Coint men. in 7 f.c. ro. So So Lispfurs
phiful. 1.2 $+A \cdot t . D 0 ; 12$ 1616.1 itcm

1633. gainft it. * One of them does exprefly condemn it for a Herefy. And fince him, it hath been called in by $\dagger$ two Seffions of the Cardinals, as being an Opinion both abfurd and dangerous: And therefore likewife do they punihh it, by cafting the Defenders of it into the Pope's trueft Purgatory, the Inquifition: But yet neither thefe Councels, nor any (that I know of) fince them, have procecded to fuch a peremptory cenfure of it, as to conclude it a Herefy : fearing perhaps, left a more exact examination, and the difcovery of future times, finding it to be an undeniable Truth, itmight redound to the prejudice of their Church, and its Infallibility. And therefore he that is moft bitter againt it, in the hear apd vio lence of Oppolition, will not call it a Herefy : the wort that he dares fay of it, is,

That it is, Opinio temeraitis, que iftero faltem pede intravit Harefios Limen; Atala Opinion, and bordering upon Herefy. Though unta this likewife he was incited; by the gagernefs of Difputation, and a defire of $V i$ tory , for it feems many eminent. Men of that Church before him, were a great deal more mild and moderate in their cenfures of it.
$p_{a u l}$ the Third,was not fo much offended ạt Copernicus, when he dedicated his Work unto him.
The: Cardinal of Cusa, does exprelly maintain this Opinion.
Schombergius, the Cardinal of Capu, did,' with much importunity, and greas approbation, beg of Coperrichs the Commentaries that he writ in this. kind. And it feems the Fathers of the Council of Trent, were not fuch confident Defenders of Ptoleny's Hyporbffis againft Coperricus, as many now are. For Ipeaking of thofe intricate Subtilties, Which the Fancies of Men had framed, to maintain the practice of the Church, they compared them to Attronomers, who (fay they ) do fain Exicutricks and Epicyyles, and fuch Engines of tlie Orbs, to fave the Pben nomena; though they know there are no fuch things. But now, becaufe this Opinion of Coperricus, in later times, hath been fo frrit-ly forbidden, and punified, it will concern thofe of that Religion, to take heed of medling in the defence of jit, but. rather to fubmit the liberty of their Reafon, unto the

[^1]PROP. II.
That there is not any place in Holy Scripture, froms which (being rightly underflood) we may infer the Diurnal ©Mo. tion of the Sun or Heavens.

IT were happy for us, if we could exempt Scripture from Philofophical Controvèrfies: if we could be content to let it be perfeat for that end unto which it was intended, for a Rule of our Faith and Obedience; and not ftretch it alfo to be a Judg of fuch natural Truths, as are to be found out by our own induftry and experience. Though the Holy Ghoft could eafily have given us a full refolution of all fuch particulars; yet he bath left this travel to the Sons of Men to be exorcifed therewith; Mundum reliquit difputationibus Hominurs; that being bulied; for the moft part, in an inquifition after the Creatures, we might find the lefs leifure to wait upon our Lufts, or ferve our more finful Inclinations.
But however, becaufe our Adverfaries generally do fo much infult in thofe Arguments that may be drawn from hence; and more efpecially, becaufe Pineda doth for this reafon, with fo many bitter and empty reproaches, revile our learned Countrymän,

Dr.

Dr. Gilbert, in that renewing of this Opinion, he omitted an anfwer to the ScriptureExpreflion; : therefore 'tis requifite, That in the profecuting this Difcourfe, we Ihould lay down fuch fatisfaction, as may clear all Doubts that may be taken thence : efpecially fince the prejudice that may arife from the mifapprehenfion of thofe ScripturePhrafes, may much difable the Reader from looking on any other Argument, with ari equal and indifferent mind.

- The places that feemto oppofe this, àre of two kicds. Firft, Such as imply a Mo'tion in the Heavens: Or, fecondly, fuch as feem to exprefs a Ref and Immobility in the Earth:

Thofe of the firft kind feem to beat in them the deareit evidence, and therefore are midre inffted on by our Adverfaries: They may be referced ato thefe thrieo Heads.
I. Allthofe Scriptures where there is any mention made of the Riving or Setting of the Sun or Stars.
2. That ftory in Fofbes, where the Sun ftanding ffill, is reckoned for a Miracle: :
3. That other Wonder in the days of Hezekiah, when the Sun went back ten degrees in the Dial of Ahas All which places do feem toiconclude, That the Diurnal Motion is'caufed by thic Feavens.

## T: To this l anfwer in geheral;

That the Holy Ghooft, in thefe Scriptureexpreflions, is pleafed to accommodate him$i_{i} \cdots, \ldots, \therefore \quad, \quad . \quad$ Self
felf unto the conceit of the Vulgar, and the ufual Opinion: whereas, if in the more proper phrafe it had bsen faid, That the Earth did rife and fet; or, that the Earth ftood ftill, evc. the People who had been unacquainted with that fecret in Philofophy, would not have underftood the meaning of it, and therefore it was convenient, that they fhould be fpoken unto in their own Langtage.

Ay, but you will reply, It hould feem more likely, if there had been any fuch thing, that the Holy Ghoft Thould ufe the trueft expreflions: for then he would at the fame time have informed them of the thing, and reformed them in an error: lince his Authority alone had been fufficient to have rectified the Mitake.

I anfwer: I. Though it were, yet 'tis befide the chief fcope of thofe places, to inftuct us in any Philofophical Points, as hath been proved in the former Book; efpecially when thefe things are neither neceflary in themfelves, nor do necellarily induce to a more full underftanding of that which is the main bufinefs of thofe Scriptures. But now the People might better cinceive the meaning of the Holy Ghoft, when he does coriform himfelf unto their Capacities and Opinions, than when he talks exactly of things in fuch a proper phrafe, as is beyond theier reach: And therefore tis faid in IJaiab, $I$ ain the Lord, which teacheth thee utilia, prof-: table things: where the glofs has it, mon fub$\mathrm{C}_{4}$ tilian

## That the Earth mady be a Planet.

 tilia, not fuch curiofities of Nature as are not eafily apprehended.2. 'Tis not only befides that which is the chief purpofe of thofe places, but it might happen alfo to be fomewhat oppofite unto it. For Men being naturally unapt to believe any thing that feems contraty to their fenfes, might upon this begin to queftion the Authority of that Book which affirmed it, or at leaft to wreft Scripture fome wrong way, to force it to fome other fence which might be more agreeable to their own falfe Imagination. * Tertullian tells us of fome Hereticks, who when they were plainly confuted out of any Scripture, would prefently accure thofe Texts or Books to be Fallible, and of no Authority; and rather yield Scripture to be erroneous, than forgo thofe Tenents for which they thought there was fo good reafon. So likewife might it have been in thefe Points, which feem to bear in them fo much contradiction to the fenfes and common opinion: and therefore 'tis
${ }^{5}$ In Geref sidditr./. 2 excellent advice fet down by $*$ S. Aufin; Quod nibil credere de re obfcurâ temere debemus, ne forte quod poftea veritas patefccerit, quamvis libris fanctis, five Teffamenti veteris, five novi, nulo modo effe poffit aducrfuin, tamen propter amorem noftri erroris odetimus: That we thould not haltily fettle our Opinions concerning any obfcure matter, left afterwards, the Truth being difcovered, (which however it may feem, cannot be repugnant to any thing in Scripture) wre fhould

That the Earth may be' a Planet.
Should hate that, out of love to the Error that we have before entertained. A little reading may inform us how thefe Texts have been abufed to ftrange and unmeant Allegories; which have mentioned any natural Truth in fuch a manner as was not agreeable to Mens Conceits. And befides, if the Holy Ghoft had propounded unto us any Secrets in Philofophy, we fhould have been apt to be fo bufied about them, as to neglect other Matters of greater importance. And therefore Saint Ayfin propofing the ${ }^{\text {lbid.cap. } 9}$ Queftion, What fhould be the reain why the Scripture does not clearly fet down any thing concerning the Nature, Figure, Magnitude, and Motion of the Heavenly Orbs ? he anfwers it thus: The Holy Ghof being to deliver more necellary Truths, would not infert thefe, left Men, according to the pravity of their Difpofitions, hould neglect the more weighty Matters, and beftow their thoughts about the fpeculative natural
) Points, which were lefs needful. So that it might feem more convenient, that the Scripture fhould not meddle with the revealing of thefe unlikely Secrets, efpecially when it is to deliver unto us many other Myfteries of greater neceflity, which feem to be directly oppofite to our fenfe and reafon. And therefore, I fay, the Holy Ghoft might purpofely omit the treating of thefe PhiloSophical Secrets, till time and future difcovery, might with leifure fettle them in the opinion of others: As he is pleafed, in other things
things of a higheri kisd, to apply himfelf unto the Infirmity of our Appretentions, by being reprefented, as if fie were a humane Nature, with the parts and paffions of a Man. So in thefe thing likewife, that he might defcend to our Capacities, does he vouchfafe to conform his Expreflions, unto the error and milfake of our Judg: ments.
But before we come to à further illuftration, let us a lietle examine thofe particular Scriptures, which ate conmonly urged to prove the motion of the Sün or Heavens. Thefe (as was faid) might be diftributed under theféthree Heads.
I. Thore places which mention the Rifing or Setting of the San, as that in the
© Pal. 19. * Pfalm, The'Sun, like a Bridegroom, cometh oxi of bis Chatibiber and rejoicieth as a Gyant to run his Race: His going forth is from the end of Hederun, and bisi Circtiait wnto the ond of ${ }^{2} t_{\text {, }}$ and there is shotbistob bid from the theat there: of. And that in Eciclejidfers, The Sur arijeth,

In which scripturess we miay obferve divers Plitiafes that are evidently fpoken, in reference to the appearance of things, and the falfe opinion of the Vulgar. And therefore 'tis not altogether unilikely, That this which they feem to affirm concerining the Motion of the Hearens, fibiuld alfo be underftood in the fame fenfe.
The Sitht like s Bridegroom cometh out of bis Chanber; ; alluding perlaps unto the conceit

That the Earth yady be a Planete.
of ignorant Peopley as if it took reft all the while it was abfent from us, and came out of its Chamber, when it arofe.
And rejoiceth as a Gyant to rui his Race; becaure in the morning it appears bigger than at other times; and therefore in reference to this appearance, may then be compared. unto a Giant.
His going forth is from the end of Heaven, and his circhit unito the ends of it. Alluding again unto the opinion of the Vulgar ; who mot apprehending the roundnefs of the Heayens, do concieive it to have two ends; one where the Sun rifeth, the other where it fetteth.

And there is notbing bid from the beat thereof: Ipeakiing fill in reference to the common miftake, as if the Surn were actually hot in it felf; and as if the heat of the Weather were not geeerated by refection, but did inmediatly proceed from the body of the Sun.
So likewife, for that in Ecclefiaffes, where 'tis faid, The Skit rifeth, and the Sung gooth domm, \&c. "Which phrafes being próperly underftood, do import, that he is fornetimes in a higher place than at others : whereas, in a circumference, there is no place higher or lower,each part being at the fame diftance from the Centre, which is the bottom. Bat now underftand the phrafe in teference to the Sun's appearance, and then we-grant that he does feem fometimes to rife, and fometimes to go down, becaufe
in reference to the Horizon, (which common People apprehend to be the bottom, and in the utmoft bounds of it to join with the:Heavens) the Sun does appear in the Morning to rife up from it, and in theEvening to go down unto it Now, I fay, becauie the Holy Ghoft, in the manner of thefe expreffions, does fo plainly allude unto vulgar Errors, and the falfe appearance of things : therefore 'tis not without probability, that he fhould be interpreted in the fame fenfe, when he feems to imply a motion in the Sun or Heavens.
2. The fecond place, was that relation in Foghua; where 'tis mentioned as a Miracle,

Fop 18. :
12, 14.1. Gstlicess
maintains maintains
rhe literal fenfe of this place; rowards the end of that trearife, which he calls Nor. $A n$ sig. par. doctrina. That the Sun did ftand ftill. And Gofhua faid, Sun, ftand thou fill upon Gibeon, and thou Moon in the Valley of Ajalon. : So the Sun food fill in the midft of Heaven, and baffed not to go down about a whole day. And there mas : no day like that, before its: or after it. In which place likewife; there are divers phrafes wherein the Holy Ghoft does not exprefs things acccording to their true nature, and as they are in themfelves; but according to their appearances, and as they are conccived in common opinion. $A s$,
(i.) When he fays,Sun,fand thous fill upon Gibeon, or over Gibeon. Now the whole Earth being fo little in comparifon to the body of the Sun, and but as a Point, in refipect of that Orb wherein the Sun is fuppofed to move; and Gibeon being, as it were,

## That the Earth may be a Planet.

but a Point of this Globe of Earth : therefore the words cannot be underftood properly, but according to appearance. Tis Toftat: in probable that fogha was then at Azecha; a locum. little Eaft from Gibeon, and the Sun being fomewhat beyond the Meridian, did feem unto him, as he was in that place, to beover againft Gibeon; and in reference to this appearance, and vulgar conceit, does he command it to ftand fill upon that place.
(2.) And fo, fecondly, for that other expreflion; And thou Moon in the Valley of. Ajalon. This Planet was now a little Eaft from the Sun, it being about three or four dayes old, as Commentators guefs. Ajalon was three miles from Gibeon Eaftward, and $\mathfrak{F o}$ foua commanded the Moon to ftand ftill there ; becaufe unto himit did then feem to $\frac{O_{4}}{22} / f .21$, be over againft thatValley; whereas, ${ }^{\text {'tis cer- }}{ }^{2}$ tain, if he had been there himfelf, it would ftill have feemed to be as much diftant from him. Juft as Men commonly fpeak in fhewing another the Stars; we point to a Star over fuch a Chimney, or fuch a Tree, becaufe to us it appears fo; whereas the Star in it felf is not fenfibly more over them, than it is over us. So that in this phrafe likervife the Holy Ghoft doth conform himfelf unto the appearance of things, and our groffer conceit.
(3.) And the Skn flood fill in the midff of Heaver. Now to fpeak properly, and as the thing is in it felf, Heaven has no midft but the Centre; and therefore, this alfo mult be:interpreted in teferience to the opinion of the Vylgar'; and by the madit of Heaven, we are to undertand fuch a place as was not very near to cither of the ends, the Eaft or Weff.
(4.) And there poas no day like that, before it, or after it: Wbich words are not to be underitood abfolutely, for there are always longer days under the Poles: büt in refpect to the opinion of the Vulgar, that is, there was never any day fo long which theje ignotant People knew of.
6.3. As for this laft place, concerning the 2King 20. Sinn's returning ten degrees in the Dial of
1,
jla. 8 8.8. Ahaz; I think it may probably be affirmed, That it is to be underfood only concerning the SHadoñ:: which though it do necelarily happeni in all Horizontal Dials, for any Latitude betwixt the Tropicks: And fo confequently in all Declining Dials; the Elevacion of whofe Pole is lefs than the Sun's greateft Declination ; as Clavies, de Horol. cap. 21. obferves: Yet the Circumftances of this relation in Scripture, makes the Event to differ from that othet which is common and natural; which againft its nature did feem to go backwards, when as the Sun it felf was not in the leait manner altéred from its nfual courfe. Of this opinion were $A$ Garbinell, Ariks Montanus, Burgeinfis, Vatablios Smifties, \&c.

The Reafons for it may be thele;

1. The Miracle is proposed only concerning the Shadow; Wilt thou that the Sbadow fhail

That the Earth may be a Planct.
fhall afcend ar return by tess degrees? There being not in the offer of this Wonder, any the dealt mention made concerning the Sun's going backwards.
2. Tis likely we Mould have had fome intimation concerning the extraordinary length of the Day, as it is in that of Jogka; but in this relation, the chief matter that the fory takes notice of, is the alteration of the Shadow.
3. Had it been by the fuppofed return of the Sun's Body, this had been a greater Miracle, than thofe which were performed upon more folemn occafions; it had been more wonderful than its feeming reft in Fofhua's time ; than the fupernatural Eclipfe at our Saviour's Death, when the Moon was in the full. And then it is not likely, that the Holy Ghoft, in relating of this Miracle, Thould chiefly infift in exprefling how the Shadow returned, and that only in the Dial of Ahaz.

4 This Sign did not appear in the Sun it felf; becaufe in 2 Chron. 32.31. 'tis faid, That the Envaifadors of the King of Babylon. did come unto Hezekiah, to enguire of the Wonder tbat was done in the Land; and therefore it feems the Miracle did not confif in any change of the Heavens.
5. If it bad been in the Sun, it would have been as weil difcerned in other parts of the World, as tu the lyade of forman. And then,
i. What
in What need the King of Babjlon fend thither to enquire after it ? If you reply; becaufe it was occafioned by Hezekiab's Recovery, I anfwer, 'Tis not likely that the Heathens would ever believe fo great a Miracle fhould be wrought, meerly for a Sign of one Man's recovery from a Difeafe; but would rather be apt to think that it was done for fome more remarkable purpofe; and that by fome of their own Gods, unto' whom they attributed a far greater power, than unto any other. 'Tis more probable, that they might hear fome flying Rumour of a Miracle that was feen in. Fudea; which; becaufe it hapned only in Hezebiab's Houfe and Dial, and that too upon his, recovery, from a dangerous ficknefs, they miight be more apt to belieye that it was a fign of it.
2. Why have we no mention made of it in the Writings of the Ancients? It is no way likely, that fo great a Miracle as this was' (if it were in the Sun) fhould have been paffed over in filence; Efpecially, fince it hapned in thofe later Times, when there were many Heathen Writers that flourifhed in the. World, Hefod, Archilochus, Symonides; and not long after, Homer, with divers others; and yet none of them have the leaft mention of any fuch Prodigy. We have many relations of Matters that were lefs obfervable; which were done about that Time; the Hiftory of Numa Pompilius, Gyges; the fight betwist the three Brethren,

That the Earth may be a Planef.
With divers fuch Roties.. And 'tis fcarce credible, that this fhould have beeri omitted amongft the rext:
Nay; we have (as many guèfs) forme hins from prophane Antiquity; of the Miracle wrought by foghua. Unto which, 'tis thought, the Ancients did allude, in the Fable of Pbiëetorin, when the Sun was fo irregular in his courfe; that he burnt fome part of the World. And queftionlefs then, this which hapned in later Times; would not have been fo wholly forgotten. 'Tis an Argument.uifged by * Orijen, That the Eclipfe at our Saviour's Paflion was not univerifal; becaufe no prophiane Author of thofe times mentions it. Which Confequence is the we: ry fame with that which is urged in this cafe : But by the way, his Antecedent was falle; fince + Tertulliain affirms, That it.was' recorded among the Romian Annals:
Now, as for that fory in Herodotus, where Lib, 2 . after he had related thie fight of Serpacherib;' he telts us; how the Sun did, four times in ithe. fpace of 10340 Years, invert his courre, and rife in the Weft; which would feem fo unto other Nations, if he had only returned, as many conclude, from this Scripture: As for this fory, (I fay) it cannot weill be urged as pertinent to the prefent bufinefs, be-: caufe it feems to have reference unito Times that never were:
So that all thefe things being well confidered, we fhall find it more probable, that

That the Earth may be a Tlunet,
this Miracle doth cönfift in the return of the Shadow.

If you Object, That the Scripture does exprefly fay, The Sun it folf returned ten degrees. I anfwer, 'Tis a frequent manner of fpeech in Scripture, to put the Caufe for

Jona. 4. the Effect ; as that in Fonas, where'tis faid, That the Sun did beat upon the Head of Jonas; that is, the Beams of the Sun. So that of
Pial. 121. the PSalmift, The Sun fhall not fmite thee by
6. Day; that is, the heat which proceeds from the Sun's reflection. In the fame fenfe may the phrafe be underftood in this place; and the Sun may befaid to return back, becaufe the Light, which is the effect of it, did feem todo fo; or rather, becaufe the Shadow, which is the effect of that, did change its courfe.

This later Scripture then, will sot at all make to the prefent purpofe: as for thofe of the two former kinds, I have already anfwered, Thatithey are fpoken in reference to the appearance of things, and vulgar Opinion. For the further illuftration of which, I fhall endeavour to confirm thefe two particulars.

1. That the Holy Ghoft, in many other places of Scripture, does accommodate his Expreflions, unto the error of our Conceits; and does not fpeak of divers things as they are in themfelves, but as they appear unto us. Therefore'tis not unlikely, that thefe Phrafes alfo may be liable untotbe fame interpretation.
2. That
$\because$ 2. That divers Men have fallen into great Abfurdities, whilf they have looked for the Grounds of Philoropty, from the words of Scriptires; and therefore it may be dangerous, in this Point alio; to adhere fa clofely unto the Letter of the Text.

## PROP. III.

That the Holy Gboft, in nimany places of Scripture, does plainly conform bis Expreffions imino the Errors of oir Conceits; and does not 乃eeak of divers things as they are is themflives;' but as they appear into us:

THere is not any particular by which Philofophy , hath been mor'e endamaged, than the ignorant fupertition of fome Men; who, in ftating the Controverfies of it; do fo clofely adhere unto the meer words of Scripture. . Disamplurima occurrint in libris. facris ad naturam pertinentia, \&c.... They are the words of * Vallefius. 'There are fin- - Proano' "dry things in Holy Writ, concerning Na- ad phlt. © tural-Points, which moftMen think are not © So to be underftood, as if the Holy Gtioft - did intend to unfold unto us any thing in ©that kind : but referring all to the falva'tion of our Souls, does fpeak of other mat-- ters áccording to common Opinion. And D 2

## That the Eartímay té a Planot.

 a little aftetr, Ego, diviing hac eloquia," \&c. ${ }^{6}$ I for my part am perfuided, that thefe ' Divine Treatifes, were not written by the ${ }^{〔}$ Holy and Infired Pen-men, for the Inter'pretation of Philofophy, becaufe God left - fuch things to be found out by Mens labour 'and induftry. But yet, whatfoever is in ${ }^{6}$ them concerning nature, is moft true; as 'proceeding from the God of Nature, from ${ }^{6}$ whom nothing could be hid. And queitionlefs, all thofe things which the Scripture does deliver concerning any natural Point, cannot be but certain and infallible, being underftood in that fenfe, wherein they were firft intended; but now that it does fpeak fometimes according to common opinion, rather than the true nature of the things themelves, was intimated before;* Veff. Trac. 3. cap. 2.
$\dagger$ Sancius in Jfa. 13.5
Iscm in Zashar. lib.g.nim. 45. wherefore (by the way) * Fromondus his triumph upon the latter pare of this Quotation, is but vain, and to no purpofe. 'Tis a good rule fet down by a learned $\dagger$ Commentator, to be obferved in the interpretation of Scripture: Scriptura Sacra Sapi non tam adverititem ipfam, guam ad bominum opinionem, fermonem atcommodat; that it does many times accommodate its expreffions, not fo much to the Truth it felf, as to Mens Opinions. And in this fenfe is that Speech of Gregory concerning Images and Pictures,
ICinmms attributed by \|| Calvin unto the Hiftory of in Ge.: 1. the Creation, viz. Librum effe idiotarum; That it is a Book for the fimpler and ignosant People. For it being writter to in-

## That the Earth szay be a Planet.

form them, as well as others, 'tis requifite that it fhould ufe the moft plain and eafy expreflions. To this purpofe likewife is that of * Merfennus, Mille font Scriptura loca,\&c. - There are very many places of Scripture, ${ }^{4}$ which are not to be interpreted according f to the Letter ; and that for this reafon, -becaufe God would apply himfelf unto our © capacity and fenfe: Prafertion in is is, que ad ress naturales, oculifgue fubjectas pertinent; more efpecially. in thofe things which concern Nature, and are fubject to our Eyes. And therefore in the very fame place, tho he be eager enough againft Coperucus, yet he concludes that Opinion not to be a Herefy; becaufe (faith he) thofe Scriptures which feem to oppofe it, are not fo evident, but that they may be capable of another Interpretation: Intimating, that it was not unlikely they fhould be undertood in reference to outward appearance, and common opinion: And that this manner of fpeech is frequently ufed in many other places of Scripture, may be eafily manifeft from thefe following Examples. Thus tho the Moon may be proved, by infallible obfervation, to be lefs than any of the vilible Stars; yet becaufe of its appearance, and vulgar opinion, therefore doth the Scripture, in Com- Gen. r.or 6 parifon to them, call it one of the Great ${ }^{\text {Pr. } 136.7 .}$ Lights. Of which place, faith Calvin, Mofes populariter fcripfir, nos potius reffexit quam fydera. Mofes did not fo much regard the Nature of the thing, as our Capacicy; and D 3 theren
-
 … Sancti concilium' Aftrologjann docere: 'It was ' not the purpofe of the Holy Ghoft to teach 'us Aftronomy: but being to propound a ${ }^{6}$ Dotrine, that concerns the moft fude and "fimple People, he does (both by" Mofes sand the Prophets $)$ conform himfelf unto 'their-phrafes and conceits: left any fhould s think' to excufe his own ignorance with the ?pretence of:dificulty; as Men comimonly 'do in thofe things which are delivered af' ter a leatried and fublime manner. : Thas

* De ope Zanchy * likèwife, Mofeis majorem rationem ribus Dei, babuit nofiti-bumanique jrdicii, \&c. © When
 sap.1. . $\because$ had a more efpecial reference to Menis Opi' nions of it, than to the truth of the thing ' it felf,' becaufe he was to deal with fuch; "who do judg ufually, rather by their Senfe; than by their Reaforn. Nor will that diPtinction of Froniontus; and others; avoid this interpretation, when he tells us of Mag nus Matorialis; which refers to the bulk and quantity of the Body : and Magnum Formale, which imports the greatriefs of its Light.: For we grant, that it is really unto us a greater Light than any of the Stars, or than all of them together yet there is not any one of them, but is in it felf a bigger Eight than this: 'And therefore', when we fay this fpeech is to be underfood according to its
appearance, we do not oppofe this to rean lity; but'tis implied, that this reality is not ablolute, and in the nature of the thing it felf, but only relative, and in reference to us, Imay fay, a Candle is a bigger Light than a Star, or the Moon, becaufe it is really fo to me. Howerver any one will think this to be fpoken, only in relation to its appearance, and not to be underftood as if the thing were fo in it felf. But (by the way) it does concern Fromondus to maintain the Scripture's Authority, in revealing of natural Secrets; becaufe, from thence it is that he fetches the chief Aigument for that ftrange Aflertion of his, concerning the heavinefs of the Wind; where Fob fays, that Gad makes the weight for the Wind. $\cdots$ Thus likewife, becaufe the common People ufual:ly think the Rain to proceed from fome Waters in the Expanfum: therefora duth Mofes, in reference to this erroneous Conceit, tell us of Waters aboye the Firmamenm, and the Windows of Heaven: Of which? faith Calvin, Nimis ferviliter litera fa afteingunt \& \&c. 'Such Men too fervilely tie themi felves unto the Letter of the Text, who 'hence conclude, that there is a Sea in the ' Heavens: when as we know, that Mofes ' and the prophets, to accommodate them' felves unto the capacity of ruder Reople, ' do ufe a vulgar expreffion; and therefore
' it would be a prepofterous courfe, to sie© duce their phrafes unto the exact Rules of «Philofophy. Let meadd, that from this D 4 miftake,

De Meteor.
lib.4.c 2.
art. 5 .

That the Earth may be a Planet. miftake, 'tis likely did arife that grounders obfervation of the ancient Jews; who would not admit any to read the beginning of $\mathrm{Gi}_{-}$hefis, till he was arrived to thirty Years of Age. The true reafon of which, was this; not becuufe that Book was harder than any other; but becaufe Mofes conforming his expreffion to vulgar Conceits, and they examining of them by more exact rules of Philofophy; were fain to force upon them ma; ny ftrange Allegories, and unnatural Myfteries.

Thus alfo, becaure for the moft part we conceive the Stars to be innumerable, therefore doth the Holy Ghoft often fpeak of them in reference to this opinion. So Feremry, As the Hoaft of Heaven cannot be numbred, weither the Sand of the Sea meafured, fo twill I multiply the Sced of David: So likewife when God would comfort Abraham with the promife of a numberlefs pofterity, hebids himlook up to Heaven, and tells him, that
Gien.reg.
${ }^{4}$ in i.c.up.
Sphers. his Seed fhould be like thofe Stars for numBer: Which, faith * Clavies, Intelligendum eff fecundum communem Sententiam vulgi, ex- iffimantis infanitam effe muslititudinem fellarkm, dums eas notte $\int$ erena confuse intuetur; is to be underftood according to the common opinion of the Vulgar, who think the Stars to be of an infinite multitude, whillt they behold them all (as they feem confufed) in a clear Night. And though many of our Divines docommonly interpret this Speech to bea Hyperbole; yet being well confidered;

## That the Earth may be a Planet.

we fhall find that Abrabam's Pofterity, in fome few Generations, were far more than there are vifible Stars in the Firmament; and of fuch only does God fpeak, becaufe he bids. Abrabam look up to the Heavens.

Now all thefe, even unto fix differences of Magnitude, are reckoned to be but 1022. True indeed, at the firft viewing of the Heavens, it may feem an incredible thing, that they fhould be of no greater a number ; but the reafon of this is, becaufe they appeat fcattered and confufed; fo that the eye cannot place them in any fuch order, as to reckon them up, or take any diftind furvey of them. Now 'tis a known truth, Quod fortius operatur pluralitas partium, ubi ordo abef; ; nam inducit fimilitudinem infiniti, oi impedit comprehenfonem: That a plurality of parts, without order, has a more ftrong operation, becaufe it has a kind of feeming infinity, and fo hinders comprehenfion. And then befides, there are more appearances of Stars many times, than there are bodies of them; for the Eye, by reafon of its weaknefs and difability, to difcern any thing at fo great a diftance; as alfo, becaule of thofe Beams which proceed from fuch remote Bodies, in a twinkling and wavering manner, and formix and confound themfelves at their entrance into that Organ ; it mult needs receive more reprefentations than there are true bodles. But now, if a Man do but leifurely and diftinctly compare the Stars of the Heaven with thole of this number, that

## 42

## That the Earth may be a Planet:

 are noted in a Cicleftial Globe hie fiall fcarce find any in the Sky which are not marked with the Globe; Hay; he may oblerve many in the Globe, which he can fratce at all difcern in the Heavens.Now this number of the Stars, is commonly diffributed into 48 Conftllotions; in each of which, though we fhould fuppofe tein thoufand Stars, (which ean fraree be conceived) yet would not all this number equal that of the Children of Jfrael. Nay, "tis
In prim. c, the affertion of Clavims, that Abrabam's Po-
sphare. flerity, in fome few Generations, were far more than there could be Stars in the Firmament, thouigh they fluck fo clofe that they touched orieanother :And he proves it thus; A great Circle in the Firmament, does contain the diameter of a Star of the firf Magnitude $54960^{\circ}$ times; In the Diameter of the Firmament, there are contained 4760 Diameters of fuch a Star: Now if we multiply this for a Diameter, the Product will be 7 F209600, which is the full number of Stars, that the eighth Sphere (according to Ptolomy's grounds) would contain, if they flood fo clofe that they toushed one another.
The Children of Ifrat were reckoned, at their going out of Egypt, 603550 , of fuch as were one and twenty Years old, and upwards, and were able to go to War; befides Children, and Women, and Youths, and old Men, and the Levites; which in probability,did always treble the other number.

## That the Earth maxay be a Planet.

bet. Now if they were fo many' at one time, wemay well conceive, that in all thofe feverat Generations; both before and fince; the number wixs mach augmented; and long before this time, did far exceed this fuppofed multitude of the Stars. From all which we may infer, that the Scripture-expreflions in this kind,' are to be underftood according to appearance and common opinion.

- Another place ufually cited for the fame parpofe, to fhew that the' Holy Ghoft does not fpeak exactly concerning natural Secrets; is that in the Kings and Cbronicles, which relates unto as the meafure of Solos mon's braken Sea, whofe Diameter was ten Cubits, and its circumference thirty ; whereas to fpeak Geometrically; the more exact proportion betwixt the Diameter and the Circumference, is not as ten to thirty, but rather as feven to twenty two.

Bit againft this 'tis * objected by our Adverfaries,
I. This Sea was not perfectly round, but rather inclining to a femicircular Form, as Fofephus affirms.
I reply.: If it were fo, yet this is fo much from helping the matter, that it makes it much worfe; for then the difproportion will be far greater.
But fecondly, Scripture, which is to be believed before foofephus, does tell us in exprefs tearms; that it was round all about, 1 King. 7. 23.

Ant. $7 \mu d$. lib.8.c.2.

Rof.rbid. 2 The proportion of the Diameter to the Circumference; is not exactly the fame as feven to two and twenty, bit rather lefs, I anfwer, Though it be, yet 'tis nearer unto that, than any other number.
2bid.
3. The Scripture does but according to its ufual cuftom, fupprefs the lefs number, and mention only that which is bigger and more

## That the Earth misy be a Plainet.

Motion; when as neithiet Pytrtaigoricas, not Copernicu, nor any dife, had then difoovered it?
5. In taking the compars of this Veffel, $\qquad$ they meafured fomewhat below the brim, where it was nairrower than at the top, and fo the Circumference there, might be exactly but thirty Cubits; whereof its Diameter was tei.
1 anfwer: ' ${ }^{\prime}$ is evident this is a meer flift, there being not the leaft. ground for it In the Text. And then befides, why might not we affirm, That the Diameter was meafured from that place,as well as the Circumference ? fince 'tis yery probable, that the Holy Ghoft did fpeak ad iden; and not tell us the breadth of one place, and the compars of another. So that all our Adverfat ries Evafions cannot well avoid the force of the Argament that is taken from this Scriprure.
Again, common People ufually conceive the Earth to be fuch a Plain, ass in its utmoft parts is terminated by the Heavens, fo that if a Man were in the farthermoft Coafts of it, he might touch the Sky. And hence alfo, they think that the reafon why fome Countries are hotter than others, is, becaufe they lie nearer unto the Sun. Nay, Strabo tells us of fome philofophers too, who in this Point have grolly erred; affirmingithat there was a place towards the uituioft Coalts of $\mathcal{L u f i t a r a z i a}$, where a Man might Hear the noife that the sin made, as he quench'd his Beams

Beams in his defcent to the Ocean ; which; though it be anabfurd miftake, yet we may note; that the Holy Ghoit, in the exprefion of thefe things': is pleafed to conform himfelf unto fich kind of vulgar and falle Conceits; and therefore; ofter fpeaks of the - Pr.19.6: * Ends of the Heaven; and the + Ends of the Mat. 24.31

+ Pfal. 22 . World. . In this.fenfe, they that come from
 End of Heaven, Ifa. 13: 5: And in another place. Fron the Side of the Heavers, Deut. 4 32. All which Phrafes do plainly allude unto Comment. the error of valgar Clapacities, (faith SauinIfa,I I3.s titius). which hereby is better inftricted, than it would be by more proper expreffions.

Thus likewife, becaufe ignorant People cannot well apprehend how fo great a weight as the Sea and Land, fhould hang alone in the open Air, without being founded upon fome Bafis to uphold it : therefore in this refpect alfo, does \&cripture apply it felf unto their Conceits, where it often menti-
Job 38. 4: ons the Foundations of the Earch. Which
Pf. 102 i 25 Phrafe, in the Letter of it, does manifeftIy allude unto Mens Imaginations in this kind.

Thus alfo the common people ufually conceive the Earth to be upon the Water; becaufe, when they have travelled any way asfar as they can, they are at length ftopped by theSea. Therefore doth Scripture, in repfri36. 6. ferance to this, affirm, That God freathed
284.2. The Extroth apox zhe Wators; forinded the Earth

## That the Earth: may be a Plantet.

upos the Seest, aradieffablifhed it apion the Floods: Of whichPlaces faith Galuin, Nori dijpurat
 rister:loquens, ad ruditum traptem ife accommodat: Twas not David'sinitent to fpeak phillofophically cancerning the Earth's fcituation; but rather, by ufing a popular Phrafe, to accommodate his.Speech unto the Capacities of the ruder People.

In this fenfe likewife are we to underftand all thafe places of Scripture, wherein the Coafts of Heavenare: denominated from the relations of Before, Behind, the right hand, or the left. Which do not imply (faith *.Scaliger) any abfolute difference in fuch places, but are fpoken meerly in reference to Mens eftimations, and the common opinion of thore:People, for whom the Scriptures iwere firft penned. Thus:becaufe it was the opinion of the Jewilh Rabbies, that Man was created with his Faceto the Eaft : therefore the:Hebrew: word $\square$ Ip, Ifignifies
 M', Dexrra, or the South; ? Sxies, Sinifrac, ar the North. You may ifee all of them put iogether in that place of: Fobs: Br- Job .23: hold, I igo formand, and be is notithere; ; axd 8,9 . backeard, bat I carnot pexceive bim; on the left ibund, where he dathineork; bus I cannot theboldibim. 6. 4. Mabumetans, that they adore towards the South; the ffews towards the Welt; Cbrifrians towards the Eant, but none to the North.

## That the Earth may be a Planet.

. But of this only by the way. However, certarit is, that the Holy Gholt does frequently in scripture fet forth the feveral Coalts of Heaven by thofe relative terms of right hand and left hand, ©́c. which expreffions do not denote any real intrinfecal difference between thofe places, but äre rather fited for the apprehenfion of thofe Men, from whofe fancy it is that they have fuch denominations. And though Ariffotle De Calo, concludes thefe feveral Pofitions to be natulib. 2. c. 2. ral unto the Heavens, yet his Authority ind this particular is not available, becaufe he delivers it upon a wrong ground, fuppofing the Orbs to be living Creatures, and affifted with Intelligences.' We maty obferve, that the meaning of thefe. Coafts,' by the relations of righithand and left hand, e̛c. is fo far from having any ground in the nature of thofe feveral places, that thefer relations are not onIy varioully applied unto them by divers Religions (as was faid before) but alfo by divers Arts and Profellions. . Thus; becaufe Aftrononers make their Obfervations towards the South parts of the Horizon; where there be moft Stars that rife and fet; therefore do they account the Weft to be at their right hand, and the Eaft their left. The Cofmograpbers; in taking the Latitude of Places; and reckoning their feveral Climates, muft look towards the North Pole; and therefore, in their phrafe, by the right hand, is mieant the Eaft; and by the left hand, the Weit : And thus (faith* Plutarich) are we

## That the Esth may be a Planet.

 to underftand thefe expreffions in Pythajoras, Plato, Arifotle. The Poets count the South to be towards the leff, and the North the right hand. Thus $\dagger$ Lucan, fpeaking of the Arabians coming unto Theffly, fays:Ignotum vobis Arabes venifis in orbem:
Smbriss mirati nemorum, non ire finiftras.
The Augures taking their Obfervations at the Eaft, count the South to be at their right hand, and the North their left : So that thefe Denominations have not. any real ground in the nature of the things; but are impofed upon them by the Scripture phrafe, in reference to the account and opinion of the Fers.
D. Hakwe! Thus alfo, becaufe heretofore it was geapol. . . . nerally received, that the Heart was.the c.1. fett. 2 . principal Seat of the Faculties; therefore doth the Spirit apply himfelf unto this common Tenent ; and in many places, attributes Prov. 8 5. Wifdom and Undertanding to the Heart.

Whereas, to fpeak properly, the reafon and difcurfive Faculties have their principal refidence in the Head (faith Galen and Hippocrates, together with the generality of our later Plyfficians) becaufe they are hindred in their Operations by the diftempers of that part, and recovered by Medicines applied unto it.

So likewife are we to underftand thofe other places; I $\int a .59 .5$. where fome Tranflations read it, Ova Afpidum ruperunt, they

That the Earth may be a Planet.
have.broken the Vipers Eggs; alluding to that common but fabulous flory of the Viper; who breaks his pallage through the Bowels of the Female: So PSal. 58. 4, 5 . where the Prophet fpeaks of the deaf Adder, that flops ber Ears againft the Voice of the Charmer. Both which relations (if we may believe many Naturalifts) are as falfe as they are common : and yet, becaufe they were entertained with the general opinion of thofe days, therefore doth the Holy Ghoft vouchfafe to allude unto them in Holy Writ: 'Tis a plain miftake of Fromondus, when in anfwer to thefe places, he is fain to fay that they are ufed proverbially only, and do not pofitively conclude any thing. For when David writes thefe words, that they are like the deaf Adder; mbich foppetb ber Ears, \&cc. This affirmation is manifeflly implied; That the deaf Adder does ftop her Eats againft the Voice of the Chiarmer: which becaufe it is not true in the Letter of it, (as was faid before) therefore 'tis very probable,that it flould be interpreted in the fame fenfe wherein here it is cited.
In teference to this alfo, we are to conceive of thofe other expreflions; Cold com: tth out of the Norih, Job 37.9. And again' Fair Weather comes out of the North, ver. 22: So ver. 17. Thy Garments are warm, when he guieteth the Earth by the South Wind. And; Prov. 25.23. The North Wind drivetb awaij Rain, Which Phrafes do not contain in them any abfolute general Truth; but can

E 2 $f 0$ to feveral Climats: and though unto us who live on this fide of the Line, the North Wind being coldeft and drieft; and on the the contrary, the South Wind moitt and Warm, by reafon that in one of thefe places, there is a ftronger heat of the Sun to exhale moift Vapours, than in the other : yet it is clean otherwife with the Inhabitants beyond the other Tropick; for there the North Wind is the hotteft, and moift ; and the South the coldeft and dry: So that with them, thefe Scriptures cannot properly be affirmed, that Cold, or that fair Weather cometh out of the-North; but rather on the contrary: All which notwithftanding, does not in the lealt manner derogate from the truth of thefe Speeches, or the omnifcience of the Speaker; but do rather fhew the Wifdom and Goodnefs of the bleffed Spirit, in vouchfafing thus to conform his Language unto the capacity of thofe People unto whom thefe Speeches were firft directed. In the fame fenfe are we to underftand all thofe places Joel 2. 31. where the Lights of Heaven are faid to be Item c.3. darkned, and the Conjfellations not to give their 15. Light, Ifa. 13. 10. Not as if they wereabfolutely in themfelves deprived of their Light, and didnot fhine at all ; but becaufe of their appearance to us : and therefore, in another place anfwerable to thefe, God fays, be will cover the Heavens, and fo make the Stars thereof dark, Ezek. 37. 2. Which argues, that they themfelves were not de-

## That the Earth may be a Planet.

prived of this Light (as thofe other Speeches feem toimply) but we.

In reference to this, likewife are we to conceive of thofe other exprefions, that the Moon faall blufh, and the Sun be afbamad, Ifa: 24. 23. That they foall be turned into Blood, Matth.24. 29. Not that thefe things fhall be fo in themfelves, (faith S. Jerome) Comment. but becaufe they fhall appear fo unto us. in Joel 3 . Thus alfo, Mark 13.25. The Stars fhall fall from Heaven; that is, they thall be fo wholly covered from our fight, as if they were quite fallen from their wonted places. Or if this be underftood of their real Fall, as it may feem probable by that place in Rev. 6. 13. And the Stars of Heaven fell unto the Earth, even as a Fig-tree caffeth ber untimely Figs, when fle is fliaken by a wighty Wind: then it is to be interpreted, not of them that are truly Stars, but them that appear fo : alluding unto the opinion of the unskilful Vulgar, (faith * Sinntivus) that think the Meteors to be Stars. And $t M e r-$ fennus fpeaking of the fame Scripture, fays, Commen. Hoc de veris 'Stellis minimè volunt interpretes v, 10,avt. 6. intelligi, Sed de Cometis or aliis ignitis Meteoris: Interpreters do by no means underftand this of true Stars, but of the Comets, and other fiery Meteors.' Though the falling of thefe be a natural event, yet may it be accounted a ftrange Prodigy, as well as an Earthquake, and the darkning of the Sun and Moon, which are mentioned in the verfe before.

## 54 <br> That the Earth may be a. Tlanet.

In reference to this, doth the Scripture fpeak of fome common natural effects, as if their true caufes were altogether infrrutable, and not to be found out, becaufe they were generally fo efteemed by the Vulgar.

* Jth. 3.8. Thus of the Wind it is * faid, That none know whence it cometh, nor whither it geeth. $\dagger$ |er. 10.13 . In another $\dagger$ place, God is faid to bring it out yemiansi. of bis Treafures: And (a) elfewhere it is
it 16.
(.a) Job 37.10. called the (b) Breath of God. And fo like(b) wife of the Thunder; concerning, which (c) 1oo 2t. of his Pomer whocan underftand? And thereFore too (d) David does fo often ftile ity, the ply, that the caufe of thefe things was not to be difcovered, which yet later Philofophers petetend to know: So that according to their conftruction, thefe phrafes are to be underftood, in relation unto their ignorance unto whom thefe Speeches were iminediatly direted.
For this reafon is it: Why, tho there be in nature many other caufes of Springs and
Yice. r: Rivers than the Sea, yet Solomon (who was a great Philofopher, and perhaps not ignofant of them ) does mention only this, becaufe moft obvious, and ealily apprehended
Joh 9.9. by the Vulgar. Unto all thefe Scriptures, I
Itsm 33.

35. 

Galilitass his Glafs; the feventh of them be-. Vide Fioing but a deceit of the eye, arifing from mond. their too great nearnefs; and if a Man try, ${ }^{\text {mire } .1 .3}$. in a clear Night, to number them diftinctly, he fhall find that there will fometimes appear but fix, and fometimes more.

True indeed, the original word of this Scripture 7- ${ }^{2}$; does not neceffarily imply any fuch number in its fignification, but yet our Englif Tranflation renders it the $\int$ even Stars; and if it had been exprelly fo in the Original too, it might have fpoken true enough, becaufe they are ufually efteemed of that number. And when it had been faid, Hf made the feiven Stars, and Orion, we might eafily have underftood the words thus : He made thofe Conftellations that are commonly known unto us under fuch names.

From all thefe Scriptures, 'tis clearly manifeft, that it is a frequent cultom for the Holy Ghoft to fpeak of natural Things, rather according to their appearance and common opinion, than the truth it felf. Now it is very plain, and our Enemies themfelves do grant it, that if the World had been framed according to the Syfeme of Copernicus, Futurum offot ut vulgus, de. Solis moth es
Terra fatu proinde ut nunc logueretsr. The Terre ftatu proinde ut nunc loqueretur. The vulgar phrale would have been the fame as now it is, when it fpeaks of the Sun's Motion, and the Earth's ftanding ftill.

Wherefore 'tis not improbable, that fuch kind of Scripture-expreflions, are to be un-

56 That the Earth may be a Planet: dertood only in relation to outward appearainces, and vulgar opiniond.

PROP: IV.

That divers learned Men baze fatert intá g'reat Alfardities; wbitilf thè have looked for the Grounds of Phitlofophy from the riords of Scripture.

IThas been ain ancient and common opinion amongft the 'Jems, that the Law of Mofes did contäin in itr,not only thofe things which concern our Religion and Obedience; but everír Sécret alfo that may poffity be

Schickasd Bectin. Hapern. Dip. s. num. 8. known in any Art or Science; fo that there is not a Demonftration in Geometry; or Role in Arithmetick; not a Myftery in any Trade, but it may be found out in the Pentatcuch. Hence it was (fay they) that Solomor had all his Wifdom and Policy: Hence it was that he did fetch his Knowledg concerning the nature of Vegetables, from the Cedar of Lebanon to the Hyfop that grows upon the Wall. Nay, from herice, they thought a Man might learn the Art of Miracles, to removea Mountain, or recover the dead. So ftrangely have the learneder fort of that Nation been befooled, fince their own Curfe hath lighted upon them.

## That the Earth mady be a Planet.

Not much unlike this foolin riperflition of theirs; is that cuftom of many Artifts a monglt us; who upori the inventibn bf ady new Secret, will prefently find out fome obfcure Text or other to Father it upon; as if the Holy Gholf muit needs take notice of every paticular, which theit partial Fancies did over-value.

Nor are they altogether guiltlefs of this Fault, who look for any Secrets of Nature from the words of Scripture; or will examinte all its exprellions by the exact Rules of Philofophy.
Unto what Itrange Abfurdities this falfe Imaginatioti of the learneder ferts hath expofed them, niay be manifeft by a great nultitude of Examples: I will mention only fome few of them: Hence it is, that they prove the hini-bone of og the Giant to be above thrée leäguès long : Ot (which is a more nodeft relation) that (hofos being fourteen Cubits in tature; having a spear ten ells in length, and leaping up ten Cubits, could touch this Giant but on the Ancle. All which,' they can confirin unto you by a cabaliftical interpretation of this ftory, as it is fet down in Scripture. Herice it is, that they teil us of all thofe ftrange Beafts which fhall be feen at the coming of the Infifias: as firft, the Ox, which Fob calls Bebeitioth, Buxtor: that every day devours the Grafs on a thour- Syng. fand Mountains; as' you may fee it in the Jeda.c. $\frac{1}{6}$. * Pfalm, where Drvid mentions the Cattel, ${ }^{* P f . s o i .3 .}$

Schickard. ib. Dijp.6. nam. 2.

## That the Earth may be a Planet.

ask how this Beaft does to find Paflure enough ? they anfwer, that he remains conflantly in one place, where there is as much Grafs grows up in the Night, as was eaten in the Day.
They tell us alfo of a Bird, which was of that quantity, that having upon a time caft an Egg out of her Neft, there were beaten down by the fall of it, three hundred of the talleft Cedars, and no lefs than threefcore Villages drowned. As alfo of a Frog, as big as a Town capable of fixty Houfes; which Frog, notwithftanding his greatnef, was devoured by a Serpent, and that Serpent by a Crow ; which Crow, as fhe was fying up to a Tree, eclipfed the Sun, and darkned the World ; by which you may guefs, what a pretty Twig that Tree was. If you would know the proper Namt of this Bird, you may find it in PJal. 50 . 11. where it is called $!M$, or in our Tranflation, the Fowl

That the Earth may be a Planet.
in it all kind of Truthg; and that every meaning was true, which by the Letter of it, or by Cabalititical Interpretations, might be found out.
Now as it hath been with them, fol likewife hath it hapned in proportion unto others; who by a fuperfitious adhering unto the bare words of Scripture, have expofed themfelves unto many ftrange Errors. Thus * S. Baffl holds, That next to the Sun, * Enarrat? the Moon is bigger than any of the Stars, ${ }^{\text {; }}$ Gen. becaufe Mofes does call them only two great Lights.

Thus others maintain, That there are Waters, properly fo called, above the ftarry Firmament, becaufe of thofe vulgar expreffions in Scripture, which in their literal fenfe do mention them. Of this opinion were many of the Ancients, Philo, fofephus; and fince them the Fathers, (a) Fuftin Mar- (a) Fefp. $t y r$, (b) Theodoret, (c) Auftin, (d) Ambrofe, ${ }_{\text {artbod. }}^{\text {al }}$ ortc 93 (e) Bafil, and almoft all the reft. Chryfoftont was foconfident of it, that he propofes the queftion in a triumphant manner : пर́ ह́। adर reariver eivà àmocivórefuot. Where are thofe Merl that can prove the Heavens to have a fpharical Form? The reafon of which was this, Becaufe 'tis faid in one Scriptare, that God Jtretiched forth the Heavens ds a Curtain, Pf̣l. ro4 2. and fpricadeth them as a Tent to dwell in, Ifa. 40. 22. . And fo in Heb. 8. 2. they are called a Tent or Tabernacle: which becaufe it is not fphatical, therefore they conclude alfo, that the Heavens are not of that form; whereas'now, the contrary is as evident as Demonftration can make a thing. And therefore, * S. Ferome in his time, fpeaking of the fame Error, gives it this plain cenfure; Eft in Ec- clefia fultiloquium, figuis Calum putet fornicis modo curvatum, Efaix quem non intelligit fermone deceptus: 'Tis fooligh /penking in the Church, if any, thrnugh mifapprehenfion of thofe words in Ifaiah, fhall affirm the Heavens not to be round.

## That the Earth may be a Plawet.

That the Scas not overflowing the Land, is a Miracle, was the opinion of (a) Rafil, a) Homil. (b) Chryfoftom, (c) Theodorict, (d) Ambroff, 4 Hexam. (c) Nazianzen; and fince them, (f) Aguinias, $(g)$ Luther, Calvin, Marlorat, with in $\mathrm{Job}^{2}$. fundry others. Which they proved from ifn f fal.
 8 , Wcriptare-expreflions; that in Fob 38. d) Hexam.
 sphen it brake forth, as if it bad iffsed out of ff qquin. the W.onb.; when. I. did break up for it my dede-part. I. creed place.; and fet bars and doors, and faid, quef. 69. bitberito Shalt than come, and no further, and art. Io bere foall the pride of thy Waves be finid. So in 1 I $f: 24$. likewife, Prov. 8. 29. God gave to the Sea Irem in his Decree, that:the Waters, flould not pafs his Pf.136.6. Commandment. And. Fer. 5. 22. I bave placed the Sand for a bound of the Sea, by a perpetsal Decree, that they cannot : peasjit : aind tho the Waves thereof tofs themfelves, yet can they not prevail; tho:they roar, yet ccate they not pafs over, that they tury not again to cover the Earth. In all which places (fay they) 'tis implied, that the Water of it felf, were it not with-held from its own natural inclination, by a more Special Power of God, would overflow the Land.

Othersinfer the fame conclufion from that in Ecclefiaftes, where the Rivers are faid to come from the Sea, which they could not do, unlefs that were higher: I anfwer; They fhould as well confider the latter part of that Scripture, which fays; that the Rivers return to that ; place from whence they came, and then the force of this confequence will vanifh.
vanifh. To this purpore, fome urge that Luk. 5.:4. fpeech of our Saviour, where he bids Simon 'Ess $76 \times 0$ - to launch forth into the deep; the Latin
OO. Word is, in altum; from whence they ga06. ther; that the Sea is higher than the Land. But this favours fo much of Monkifh Ignorance; that it deferves rather to be laughed at, than to be anfwered:

But now if we confider the true Properties of this Element; according to the Rules of Philofophy; we fhall find, that its not overflowing the Land, is fo far from being a Miracle, that it is a neceffary confequence of its Nature ; and twould rather be a Miracle, if it hould be otherwife, as it was in the general Deluge. The reafon is, becaufe the Water of it felf mult neceffarily defcend to the loweft place; which it cannot do, unlefs it becollected in a fphærical: Form, as your may plainly difern in this
Figure.

Where the Sea at D may feem to be higher than a Mountain at $B$, or $C$, becaufe the rifing
rifing of it in the midit, does fo intercept our fight from either of thofe places, that we cannot look in a ftreight Line from the one to the other. So that it may feem to be no lefs than a Miracle, by. which the Sea (being a heavy Body) was with-held from flowing down to thofe lower places of B , or C. But now, if you confider that the afcending of a Body, is its motion from the Centre; and defcent, is its approaching unto it: you fhall find, that the Sea to move from $D$, to $B$ or $C$, is a motion of Afcent, which is contrary to its nature, becaufe the Mountain at $B$, or $C$, are farther off from the Centre, than the Sea at D , the Linés $A B$, and $A C$, being longer than the other A D. So that for the Sea to keep always in its Channel, is but agreeable to its Nature, as being a heavy Body. But the meaning of thofe Scriptures, is, to fet forth the Power and Wifdon of God; who hath appointed thefe Channels for it, and befet it with fuch ftrong Banks, to withftand the fury of its waves. Or if thefe Men do fo much rely in natural Points, upon the bare words of Scripture, they might eafily be confuted from thofe other places, where God is faid to have founded the Earth upon $\therefore \quad$ the Seas, and eftablifhed it upon the Floods. From the literal interpretation of which, many of the Ancients have fallen into another Error; affirming, the Water to be in the lower place; and as a bafis, whereon the the weight of the Earth was born up. Of
this
 cont. Ido- and others. So that it feems, if a Man c) in ryal. hould refolutely adhere to the bare words ${ }^{336.6 .}$ of the Scripture, he might find contradi-
d) In $\Gamma f$. Ctionin it : of which; the natural meaning

24
${ }^{2}$ Commen, is altogether incapable. * S. Jerome tellis ps in $1 \int_{a}, L_{13}$ of fome who would prove Stars to have underftanding, from that place in "Ifa. 45 : 12. My bands bave ftretched out the Heavens; and oll their Hoaft bave I commanded. Now (fay they) none but intelligent Creatures are capable of Precepts; and therefore, the Stars mult needs have rational Souls. Of - peplant, this opinion was * Philo the Jew : náy; maNoe. ny of the Rabbies conclude, that they do Toftatus every hour fing praifes unto God; with an is Fo/s. c. 10 quef. audible real Voice. But of that in 70638. 13, 14. 7. which freaks of the Morning Stars finging together. And PSal. 19. 3, 4. where 'tis faid of the Heavens; that there is no /peech nor langurge where their Voice is not heard, and their pords are gone to the ends. of the World. And whereas we tranllate that place in the tenth of Fofhua, concerning the ftanding ftill of the Heavens; the original word, רוח, does properly fignify Silence; and according to their opinion, Fofhid did only bid them hold their peace. From fuch grounds, 'tis

* Tom i. likely did * Origen fetch his Opinion, that in Joran. the Stars hould be faved. I might fet downa many other the like Inftances, were it not for being already weary of raking into the Errors of Antiquity; or uncovering the

hakednefs of our Forefathers. That excuif of * Acofta, may jufly ferve to miti- * De n.rit. gate the Miftakes of thefe Ancient Divines : noviorbou, Facile condonandum of patribus, ficunn cognof. 16 bis c.i. rendo colendogque Creatori toti vacarent, de. creatitrà minnus apte aliguic ex parte opinati funt. . Thofe good Men were fo wholly bufied about the Knowledg and Wornip of the Creator, that they had not leifure enough for an exat fearch into the Eflence of the Creatures. However, thefe Examples that have been already cited; may fufficiently manifert, how frequently others have been deceived, in concluding the Points of Philofophy from the Exprefions of Scrip:ture. And therefore, 'tis not certain, but that in the prefent cafe alfo; it may be infufficient for fuch a manner of argut ing.

## PROP. V.

That the Scripture, in its proper conftriuClion; does not ang mebere affirm the Immobility of the Earth:

THe fame Anfwer which was infifted on before, concerning the conformity of Scripture-expreflions, to Mens capacity and common opinion, may well enough fatisfy all thofe Arguments, which feem thence to affirm the Earth's fetlednefs and immobility ; fince this is as well agreeable to outward appearance, and vulgar apprehénfion, as the other.

But now, for more full fatisfaction, I fhah fet down the particular places that are urged for it ; which being throughly examined, we may plainly difcern, that none of them, in their proper meaning, will ferve to infer any fuch conclufion.
*Vallefius
 Mifecl. l.1.c.is.
pineda, emment. in bucum.

One of there fayings, is that of the Preacher, Ecclef. 1. 4. One Generation cometh, and another paffeth, but the Earth endureth for ever ; where the original word is, תามy, and the vulgar, fat ; from whence our * Adverfaries conclude, that it is immoveable.

I anfwer: The meaning of the word, as it is here applied, is fermanet; or as we tranflate
tranlate it, endmreth.' For it is not the purpofe of this place, to deny all kind of motion to the whole Earth : but that of Generation and Corruption, to which other things in it are liable, And though Pineda, and others, keep a great deal of impertinent fit about this Scripture, yet they grant this tobe the natural meaning of it ; which you may more clearly difcern; if youi confider the chief fcope of this Book; wherein the Preacher's intent is, to fhew the extra ${ }^{-}$ ordinary vanity of all earthly Contentments, ver. 2 . the utter unprofitablenefs of all a Man's Labours, ver. 3. And this he illuftrates, by the fhortnefs and uncertainty of hls Life ; in which refpect, he is below nuany of his fellow Creatures, as may be manifefted from the fe four Comparifons.
I: From the Earth, which tho it feem to be but as the Sediment of the World, as the Rubbilh of the Creation; yet is this better than Man in refpect of hís lartingners, for ane Generation paffeth moay, and anotber cometh; butt the Earth, that abideth for ever; ver. 4.
2. From the Sun; who, though he feem frequently to go down, yet he conftantly feems to rife again, and fhines with the fame glory, vier. 5. Bitt Man dieth and paffeth a- Job $14^{2}$ 2pay; yea, Man givith up the Ghoft; and 10,12. where is he? Phelieth doinn, and rifoth nor, till the Heavens be nomore:
3. From the Wind, the common Emblem of elacertainct; ; yet it is mote con-

## That the Earth maj be a Planet.

Itant than Man, for that knows its circhits; PC.78.39. and whirleth about continnally, ver. 6. whereas our life pafeth away as doth the VVind, but re-: turneth not again:
4. From the Sea; tho it be as uncertain as the Moon, by whom 'tis governed, yet is it more durable than Man and his Happinefs. For tho the Rivers run ${ }^{-i n t o}$ it, and from it, yet is it fill of the fame quantity that it was at the beginning, verf.7. But Man grows worfer, as he grows older, and ftill nearer to a decay. So that in this refpect, he is much inferior to many other of his fellow Creatures.

From whence it is manifeft ; that this conftancy, or ftanding of the Earth, is not oppofed to its local motion, but to the changing or paffing away of divers Men in their feveral Generations. And therefore, thence to conclude the Earth's Immobility, were as weak and ridiculous, as if one fhould argue
M. Carpenter's Geog.l. 1 .
c. 4. thus: One Miller goes, and another comes,
but the Mill remains fill ; ergo, the Mill hath no motion.

Or thus; one Pilat goes, and another comes, but the Ship remains ftill ; ergo, the Ship doth not ftir.

* perflex. * R. Mofes tells us, how that many of the
1.2. c.29. Jews did from this place conclude, that Solomon thought the Earth to be Eternal, becaufe he faith it abideth, $\square$, for ever; and queftionlefs, if we examine it impartially, we fhall find that the phrafe feems more to favour this Abfurdity, than that

## That the Earth may be.a Planet.

which our Adverfaries would collect from hence, that it is without motion.

- But Mr.Faller urging this Text againft Co, pernicus, tells us; If any fhould interpret thefe Phrafes, concerning the Earth's ftand= ing ftill, verf. 40 and the Sun's motion, verf. 5 . in reference only to appearance and common opinion, he mult necellarily alfo underftand thofe two other Verfes, which mention the motion of the Wind and Rivers, in the fame fenfe. As if he fhould fay, becaufe fome things appear otherwife than they are, therefore every thing is otherwife than it appears : or,becaufe Scripture fpeaks of fome natural things, as they are efteemed according to Man's falfe conceit ; therefore 'tis neceffary, that every natural thing mentioned in Scripture, muft be interpreted in the like fenfe : or, becaufe in one place we read of the ends of a Staff, 1 Kings 8.8. and in many other places, of the ends of the Earth, and the ends of Heaven: Therefore the Earth and Heavens have as properly ends, as a Staff. 'Tis the very fame Confequence with that in the Objection. Becaufe in this place of Ecclefiaftes, we read of the reft of the Earth, and the motion of the Sun; therefore, thefe Phrafes mult needs be underftood in the fame proper conitruction as thofe afterwards, where Motion was attributed to the Wind and Rivers. Which Inference you fee is fo weak, that the Objector need not triumph fo much in its, fltength as he doth.

## That the Earth may be a Planet.

Another proof like unto this, is taken from St. Peter, Epif. 2. Cap. 3. v. 5. where he fpeaks of the Earth ftanding out of 'the Water, and in the Water, $2 x$ ouvssica; and therefore the Earth is immoveable.

I anfwer: 'Tis evident that the word here is equivalent with fuit: and the foope of the Apoitle is, to fhew, that God made all the Earth; both that which was above the Water, and that which was under it. So that from this exprefion, to collect the reft and immobility: of the Earth, would be fuch an Argument as this other. Such a Man made that part of a Mill-wheel; or a Ship, which itands below the Water, and that part which ftands above the Water; therefore thofe things are immoveable.

To fuch vain and idle Confequences, does the heat of Oppofition drive our Adverfaries.

A third Argument, ftronger than either

- Chron. of the former, they conceive may be col-
j 6,30 . lected from thofe * Scriptures: where'tis
Pral.93. T. faid, The YVorld is eftablifhed, that it cannot Iterø 96.

10. be moved.

To which, I anfwer: Thefe places fpeak of the World in general, and not particularly of our Earth; and therefore may as well prove the immobility of the Heavens, they being the greateft part of the World; in comparifon to which, our Earth is but as an infenfible Point.

If you reply, that the word in thefe places is to be underifood by a Synechdoche, as being
being meant only of this habitable World, the Earth.
I anfwer: Firft, This is only faid, not proved. Secondly, David, but à little before, feems to make a difference between the World and the Earth, Pfal. 90 2. where he fays, Before thous hadfh formed the Earth and the $V$ Vorld. But, thirdly, in another place, there is the fame original word applied exprefly to the Heavens; and which is yet more, the fame place does likewife mention this fuppofed fetlednefs of the Earth ; Prov. 3. 19. The Lord by Widdoin bath founded the Earth: and by Underifanding, bath be befiablifhed the Heaveins. So that thefe places can rio more prove an immobility in the Earth thap in the Heavens.

If you yet reply, That by the Heavens there, is meant the Seat of the Blolled, which does not move with the refl.

I anfwer: Tho by fuch ạn evafion, a Man might pollibly avoid the force of this plate: yet, firt,? 'tis but a groundlefs fhift : becaufe then, that Verfe will not contain a fill enumeration of the parts in the World, as may feem more agreeable to the intention of it; but only fhew, that God created this Earth where we live, and the Heaven of Heavens. So that the Heaven of the Stars and Planets, fhall be Thifted out from the number of the other Creatures. Secondly, There is another place which cannot be fo avoided, Pfal.89.37. where the Pfalmift ufes this exprellion, $\}$ 'כ'? It hall be effablifhed as the
 blifhed.] Thus likewife, Prov.8.27. when be eftablified the Heavens: And in the next Verfe, our Englif Tranllation reads it, when be eftabliflied the Clouds. And yet our Adverfaries will affirm the Moon, and Stars, and Clouds, to be fubject unto natural Motions: Why then fhould the very fame expreffions be counted as fufficient Arguments to take it away from the Earth ?

If it be replied; That by eftablifhing the Heavens, is meant only the holding of them up, that they do not fall down to us, (as
I: Lorinus explains that in 'Pfal. 8. and quotes
$\therefore$ Euthymius ' for the fame interpretation) Findandi verbum fignificat decidere non poffe, aut dimoteri a loco ubi collocata fint." I anfwer, Why may not we as well interpret the words thus of the Earth; fo that by clablilhing of it, is meant only the keeping of it up in the vaft places of the open Air, without falling to any other place.

From hence it is plain, That thefe Scrip. tures are to be underftood' of fuch an immobility in the Earth, as may likewife agree with the Heavens: the fame original word being fo promifcuoully applied to both.

I, but (you will fay) there are fome other places which do more peculiarly apply this fetlednefs and eftablifhment to the Earth. So Pfal. 119. 9. Thy Faithfulnefs is unto all Generations: Thous baft eftablifhed the Eirth,

That the Earth pay be a Planet.
and it abideth. Thus likewife, Pfal. 104, 5 . Who laid the Foundations of the Earth, that it fould not be renioved for ever. The latter of which, being well weighed in its Original, (faith Mr. Fuller) does in thiree emphatical words, frongly conclude the Earth's im- Mifcel $\mathrm{I}_{\text {. }}$. mobility.
As firft, when he fays, for fundavit, he hath founded it : wherein it is implied,'that it does not change its piace. To which may be added all thofe Texts, which fo frequentIy fipeak of the Foundations of the Earth; as alfo thiat expreffion of the Pfalmif, where he mentions the Pillars of the Earth, Pfalm: 75.3.

The fecond word is (מבוניר), tranflated Bafis; and by the Septuagint, $67 i$ twi $\dot{\alpha} \dot{\dot{\sigma} \phi \dot{\alpha} \lambda \in \epsilon \alpha \nu \dot{\alpha} u \bar{u} \tilde{s} \text {; that is, he hath founded }}$ it upon its own firmnefs; and therefore it is altogether without motion.
The third expreflion is , from the Root, טוט, which fignifies declinare; implying, that it could not wag with the leaft kind of declination.

To thefe I anfwer feverally :
Firft, For the word, 1 fundavit, It cannot be undertood properiy, as if the natutural Frame of the Earth, like other artifcial Buildings, did need any bottom to uphold it ; for be bangeth the Earth upon nothing, Job 26.7. But it is a Metaphor, and fignifies God's placing or frituating this Globe of Land and Water. As David tells us of the Pillars of the Eaxth: fo Gob mentions

 yet that will not prove them to be immovable.

True indeed, we read often concerning the Foundations of the Earth : but fo we do Jikewife of the Ends, Sides, and Corners of the Earth; and yet thefe Scriptures will not prove it to be of a long or iquare form. Befides, we read alfo of the Foundations of Heaven, שin mint 2 Sam. 22. 8. And yet we mult not hence infer, that they are without all motion; As alfo of the planting of the Heavens, Ifa. 51. 6. which may as well prove them to be immovable, as that which follows in the fame Verfe concerning the Foundations of the Earth.

Which phrale (if I have obferved right) in feveral places of Scripture, is to be underftood, according to thele three Interpre: tations.

1. It is taken fometimes for the lower parts of the Earth, as appears by that place 2 Sam. 22: 16. The Channels of the Sea ap. peared; the Foundations of the VVorld were difcovered.
2. Sometimes for the beginning and firft creation of it; IJa. 40. 2 I. Hath it not been, told you from the beginning? have ye not underftood from the Foundations of the Earth?
Joh, 17.24 And in many other places, Before the Foun-
Ephef.1.4. dation of the VVorld was laid; that is, before the firft Creation.

Somtimes it fignifies the Magiftrates and chief Governors of the Earth. So many

## That the Earth may be a Planet.

interpret that place in Micab 6. 2. where 'tis faid, Hear, $O$ ye Mountains, the Lord's Comtroverfy, and ye fromg Foundations of the Earth.- So P $\int$ al, 82.5 . The Foundations of the Earth are out of coirrfe: And in I Sam. 2.8. they are called Pillars; For the Pillars of the Earth are the Lords, and he bath fet the VVorld ypon tbem. Hence it is, that the Hebrews derive their word for Mafter, or Lord; from a Root which fignifies a Bafis, or Bottom, אחרן ab And the Greek word Erymol. for King, does, in its Primitives, import as mag. much as the Foundation of the People, $\beta \alpha-$
 none of all the feveral interpretations of this phrafe, will in the leaft manner conduce to the confirmation of the prefent Arguiment.
As for the fecond word, Finn, Bafos ejus. I anfwer, The proper fignification of it, is, locus dijpofitus, fedes, or fatio, an appointed Seat or Station; and according to this Jenfe, is it moft frequently ufed in Scripture. And therefore, the Heavens are fometimes called, Habitation. And for this reafon likewife; do Aquila and Symmachus trallate it by the word enfeq, a Seat, or appointed fcituation, which may as weil be attributed to the Heavens.
 it flould not be moved from the Primitive which does not fignify barely to move; but
but declinare, or vacillate; to decline or flip afide from its natural courfe. Thus it is ufed by David, Pfal. 17.5. where he prays; Hold up ny goings in thy Paths, בת בי Hy , that my Foot-ffops fide not. He does not mean that his feet fhould not move. So Pfal. I21. 3. He will not. Jiffer thy foot to be moved. Thus likewife, Pfal. 16.8. Becauff the lord is at my right band, I faal not be moved: which latt place is tranflated in the
A8.2.25. New Teftament, by the Greek word -ra$\lambda \sigma^{\circ} \omega$, which fignifies fuxtuare, or vacillare, to be fhaken by fuch an uncertain motion, as the Waves of the Sea. Now, as David's feet may have their ufual motion, and yet in this fenfe be faid not to move, that is, not to decline or flip afide : fo neither can the fame phrafe, applied to the Earth, prove it to be immovable.

Nor do I fee any reafon, why that of
Commernt. Didacus Affunica, may not be truly affirmed, That we may prove the natural motion of the Earth, from that place in Fob 6.9. Qri commovet terram è lico fuo, as well as its reft and immobility from thefe.

From all which, it is very evident, that each of thefe expreflions, concerning the founding or eftablifhing both of Heaven or Earth, were not intended to fhew the unmovablenefs of either, but rather, to manifent the Power and Wifdom of Providence, who had fo fetled thefe parts of the World

## That the Earth imay be a Planet.

World in their proper fituations, that no natural caufe could difplace them, or make them decline from their appointed courfe. As for fuch who doutterly diflike all new interpretation of Scripture, even in fuch matters as do meerly concern Opinion, and are not fundamental : I would only propore unto them a fpeech of S. Hierome, concerning fome that were of the fame mind in his time; Cum novas Semper expetant voo luptates, er gula eorum vicina Maria non Jufficiant, cur in folo ftudio Scripturarum, veteri Sapore contenti funt?

Thus have I in fome meafure cleared the chief Arguments from Scripture, againft this Opinion. For which notwithtanding, I have not thence cited any ; becaufe I conceive the Holy Writ, being chiefly intended to inform us of fuch things as concern our Faith and Obedience: we capinot thence take any proper proof for the confirmation of Natural Secrets.

PROP.

## R E OP. VL

That there is not any Argument from the Words of Scriptire, Principles of Nature, or Obfervations in Afironorny, mibich cas fufficiently evidence the Earth: to be in the Gentre of the Unìverfe.

Oulr Adverfaries do much infult in the frength of thofe Arguments which they conceive, do unanfwerably conclude, the Earth to be in the Centre of the World. Whereas, if they were but impartially confidered, they would be found altogether infufficient for any fuch conclufion; as frall be clearly manifetted in this following Chapter.

The Arguments which they urge in the proof of this, are of three forts; Either fuch as are taken;

1. From expreflions of Scripture.
2. From Principles of Natural Philofophy.
3. From common appearances in Aftronomy.
Thofe of the firft kind, are chiefly two: The firft is grounded on that commonScrip-ture-phrafe, which fpeaks of the Sun as being above us. So Solomon often mentioning

That the Eatth magy be a Planct.
humane Affairs; calls them, the VVorks Eackir.r. wobich are done snider the Sun. From whence $\mathrm{I} \%$, OC . It appears, that the Earth is below it; and therefore nearer to the Centre of the $v_{n i-}$ verfe than the Sun.
I anfwer : Though the Sun; in comparifon to the abfolute Frame of the World, be in the midft; yet this does not hinder, but that in refpect to our Earth, he may be truly faid to be above it, becaufe we ufually meafure the height or lownefs of any thing. by its being further off, or nearer unto this Centre of our Earth. From which, fince the Sun is fo remote, it may properly be affirmed, that we are under it ; though notwithftanding that be in the Centre of the World.

A fecond Argument of the fame kind, is arged by Fromondus.
'Tis requifite, that Hell (which is in the datar. a' Centre of the Earth ) fhould be moit re- 12. iteme motely fcituated from the Seat of the Ble [ Vef.rrade. fed. But now this Heaven, which is the $5 \cdot 5.2$ Seat of the Blefled, is concentrical to the ftarry Sphere. And therefore it: will follow, that our Earth mult be in the midfl of this Sphere; and fo confequently in the Centre of the World.
I anfwer: This Argunent is grounded upon thefe uncertainties; ;

1. That, Hell muft needs be fcituated in the Centre of our Eanth.
2. That the Heaven of the Blefled, muft needs be concentrical to that of the Stars
3. That placès muit be as far diffant int fcituation, as in tufe :

Which becaufe they are taken for granted, without any proof, and are in themfelves but weak and doubtful : therefore the conclufion (which always follows the worfer part) cannot be ftrong, and fo will not need any other anfwer-

The fecond fort of Arguments taken from natural Philofophy, are principally thefe three :

Arg. r. From the vilenefs of our Earth; becaufe it confifts of a more fordid and bafe Matter than any other part of the World.; and therefore, mult be frituated in the Centre, which is the worft place, and at the greateft diftance from thofe purer incorrup: tible Bodies, the Heavens.

I anfwer.: This Argument does fuppofë fuch Propofitions for Grounds, which are not yet proved; and therefore not to be granted. As,

1. That Bodies mult be as far diftant in Place, as in Nobility.
2. That the Earth is a more ignoble Subftance than any of the other Planets, confirting of a more bafe and vile Matter.
3. That the Centre is the worft place.

All which, are, if not evidently falfe; yet very uncertain.

Arg. 2. From the nature of the Centre; which is the place of Reft, and fuch as in all circular Motions, is it felf immovable; And therefore will be the fittelt fituation

## That the Earth may be a Planef.

for the Earth; which by reafon of its hea: vinefs, is naturally unft for motion.
I anfwer: This Argument likewife is grounded upon thefe two falfé Foindations: As,

1. That the whole Frame of Nature does move round, excepting only the Earth.
2. That the whole Earth, confidered as whole, and in its proper place; is heavy; or. more unfit for a natural motion thàn any of the other Planets.
Which are fo far from being fuch general Groinds, from which Conitroyerfies fhould be difcuffed, That they are the very thing in queftion betwixt is and our Adverfá: ries.
Arg: 3. From the nature of all heary Bodies, which are to fall towards the loweft place. From whence they conclude, that our Earth muft be in the Centre.:
I anfwèr: This may prove it to be à Cen': tre of Gravity, but not of Diltance ; or that it is in the midft of the World. Yea; (but fays our Adverfaries) Arifforle for this urges a Demionftration, which milift jeeds' be infallible. Thus, itié miotion of light Bodies; does apparently tend upward towards thie Circumference of the World: but now the motion of heavy Bodies, is ditectly contrary to the afcent of the other ;' whiereforeit will necelfarily follow, that there. do all of them tend unto the Centre of the Wotld:

## That the Earib may be a Planet.

1 aniwer: Though Ariffotle wecéa Nater in the Airt of Syllogijms, and he from whom he received the Rules of Difputation; yet in this particular, "ins very plam that he was deceived with a Fallacy, whillt his Argument does but only fuppofe that which it pretenid to prove.

That light Bodies do afcend unto fome Circunference which is higher and above the Earth, is plain and underiable. Bidt that this Circumference is the fame with that of the World, or concentrical unto it, cannot be reafonably affirmed, unlefs he fuppofes the Earth to be in the Centre of the $U_{n i v e r f e}$ which is the thing to be proved.

I would fain know from what grounds our Adverfaries can prove, that the defcent of heavy Bodies is to the Centre; or the afcent of light Bodies, to the Circumferenice of the World. The utmoft experience we can Have in this kind, does but extend to thofe things that are upon our Earth, or in the Air above it. And alas, what is this unto the dait fratie of the whole $V_{n v e r f e, ~}^{\text {a }}$ but phaztulum, fuch ah infenfible Point, which does not bear fogreat a proportion to the whole, as a friall Sand does unto the Earth? Wherefore it were a fenflefs thing, from our experience of fo little a part, to pronounce any thing infalibly concerning the fcieuation of the whole.

## 

Sthe Arguments front uiffronemy thieff therefour, jeseli of in inich me boalt-, ed bf to iote aminifuverqubs.
 divide all the great Circlesof a siphete int
 the . Equinoatial above it, and half belowt Thatelikevile, ithere will conitajuly be fix
 ortier fritbeadia it: :And befides, the: Circles of the Geaten and Earth; ate each way proportionable to onie anothet in fifteen German miles on the Earth,are every wherc agreeable to one Degree in the Heavens; and one Hour in the Eatth, is correfpondent to fifteen Degrees in the Equator: From whence - it may be inferred; that the Earth mult neceflarity be fcituiated in the midftof there Circles ; and fo confequently, in the Centre of the World.
1 anfwer: This Argomimen does rightly prove the Earth to be in the midf of thefe Circles : But we canhint hence conclude, that it is in the Centre of the Woild:froin which; tho it were never fo inuch diftant, yet would it fill remain in the midet of thofe Circles; becaufe it is the Eye that imagines them to be defrribed aboutit:. Wherefore it were a weak and prepofterous Collection, to argue thus, That the Earth is in the Ceintre of the World, becaufe in the midft of thofe Circles; or becaure the parts and Degrees of
 Whe Fartstand Dergreest in Heapen: Whercis; Gi

## That the Earth way be a Planet:

it follows tather on the contrary; That thefe Circles are equally diftant and proportional in their parts, in refpect of the Earth, be? caufe it is our Eye that defribes them about the Centre of it.
So that though a far greater part of the World did appear at one time than at another; yet in refpett of thofe Circles which our Eye defribes about the Earth, all that we could fee at once, would feem to be but a perfect Hemifphere: As may be manifefted by this following Figure.

Where if we fuppofe A to be our Earth BCDE one of the great Circles which

That the Earth esay be a Planet.
we fancy about it, F:GHI the Orp of fixed Stars, R the Centre of them. Now chough the Arch, G F.I, be.bigger than the other, G HI, yet notwithifanding, to:the Eye on the Earth A, one will appear a Semicircle as well as the other; becaufe the Imagination does transeri all thore Stars into the leffer Circle, BODE, which it does fancy to be defribed abovie that Centre. Nay, though there were a habitable Earth, at:a far greater diflance from the Centre of the World, even in the place of 7 fupiter ; as fuppofe at Q , yet then alfo. would there be; the fame appearance. For though the Arch; K. F L, in the flarry Heaven, were twine: as big as the other, K.H.L; yet notwithflanding, at the Earth Q, they : woold both appear but as equal Hemifpheres; being transferred into that other Circle, M N OP, which is part of the Sphere that the Eye defreribes to it felf about the Earth.
From whence we may plainly diferm, That though the Earth be never 10 far dit flait from the Centre of the World, yet the Parts and Degrees of that imaginary; Sphere about it, will always be propor? tional to the Rarts and Degres of the Earth
Arg. 2. Another Demonfration like unto this former, frequently urged to the fame purpofe; is this: If the Earth be out of the Centre of the World; then mult it be fcituated in one of thefe- three Pofitions : eis Vid. Gurp,

 quitiow dealitirf font plater, wherr the Days atid Wilghts: ffall beof aruequat lengebe: Se-

## What the Eurth may be a Planet.

But yen this will not prowe, that it is in the midd of the Univerfo i For let our Adyerfaries fuppofe it top bs as far diftant from that : as ther conceive the Sun to be; yet may io fill be figuated, in the very concourde of thefe two Lines: becaufe the - Axis of the Wopld is nothing elfe but that imaginary Line which parfeg through the: Poles of our Earth the World $\because$ And fo Bikewife the Egmasor is nothing elfe but agreat Circle in the midfe of the Earth betwixt both the Poles, which by imagination is continued even to the fixed Stars, . Thius allo, we may affam the Earth to be:in the plane of the Zodiack, if by its annual motion it did defribe that imaginary Circle : and in the plane of the Equator, if by its diurnal motion about its own $A x i s$, it did make feveral parallels, the midft of which fhould be the Equator. From whence it appears, that thele two former Arguments proceed from one and the same miftake, whilft our Adverfaries fuppofe the Circumference and Center of the Sphere, to bethe fame with that of the World.
Another demonftration of the fame kind, Arg. 3 : is taken from the Eclipfes of the Sun and Moon; which would not always happen when thefe two Luminaries are diametrically 'oppofed, but-fometimes when' they are lefs diftant than a Semicircle, if it were fo that the Earth were not in the Centre.
I anfwer: This Aygument; if well confidered, will be found molt directly: to infer . $\mathrm{sr}^{\mathrm{M}}$.

## That the Earth manay be a Planit.

this conclufion, That in all Ecliples, the Earth is in fuch a ftreight Line, (betwixt the two Lumiñaries) whofe extremities do point unto oppofite parts of the Zodiack, Now tho our Advérfariés fhould fuppofe (ås Copernicus does) the Earth to be fcituated in that which they would have to be the Sun's Orb; yet would there not beany Eclipfe,but when the Sun and Moon were diametrically oppofite, and our Earth betwixt them : As may clearly be manifefted by this Figure, where you fee the twơ Luminaries in oppofite Signs; and according as any part of our Earth is fcituated'by its diurnal Revolution, fo will every Eclipfe be either vifible, or not vifible into it.

That the Earth may be a Planet.
Arg. 4 The laft and chief Argument, is Arift. do taken' from the appearance of the Stars $;$ calo. $1,2$. which in every Horizon, at each hour of ${ }^{c} 14$. the Night, and at all times of the Year, feem of an equal bignefs. Now this could not be, if our Earth were fometimes nearer puto them by 2000000 German miles, which is granted to be the Diameter of that Orb, wherein the Earth is fuppofed to move:

I anfwer: This Confequence will not Copern, hold, if we affirm the Earth's Orb not to lincrs, be big enough for the making of any fenfibe difference in the appearance of the fixed Stars.
Yea, but (you will fay) 'tis beyond conceit, and without all reafon, to think the fixed Stars of fo vaft a diftance from us, that our approaching nearer unto them by 2000000 German miles, cannot make any difference in the feeming quantity of their Bodies:

I reply: There is no certain way to find out the exact diftance of the ftarry Firmament : But we are fain to conclude of it by Gonjectures, according as feveral Reafons and Obfervations: feem moft likely unto the Fancies of divers Mep. Now that this Opinion of Copernicus does not make it too big, may be difcerned from the fer following Confiderations.
The words, great and little, are relative tearms, and do import a comparifon ta fomething eife: So that where the Firma-
ment (as ie is accoodingoto Copurnicm) is faid to be too big' 2tistifely, that this word
 ther thing of the faime laind, the leaft: of which is the Moons Orbi : Bute now if its being for much bigger than this may bea aifuf ficient: reafon, why is :fhould be thoughteoo greaty then it feems that every thing which exceeds zeother of the: fame kind in fuch a proportion, may be concluded to be of too'blis equantity : and ilib confequenty, Wei mayy dffric', that there is no fuch thing in the Worid. And bence it will follows, that Whill è and :Blephants are meer Chivec:ra's, and poetical Fictions, becaufe they do much execeed many other liging Cieatures. If all tilis' eighth Sphete, (faith Galkilatis) as great ds'iths, were a light Body, and placed fo fal froftits, that it appeared, put as one of phe leffer Stars we whoutd then efteem it 'but litele' ; and ehereforo, xie have no reafon now to thruft it out from being amonigh: the Werks of Nathe; by reafonl of its
 of out Adrevifatios Tyeba, Franondes; and othets, 4 de beyre of that incredible fwiftnéfs whith 'they 'magine in their Primum Lutatle; That 'twas requifite the Motion of the felearenis fliould have'a kind of infinity. inity, the better to manifeft the infinitemefs of the Creator. And why may notive: as well- affirn this: conieetning the bignefs of the' Hedivenis? ? ifficilius :ef acciders proter'
 meanimg ing that 'tis les abfurd to imazine the eighth Sphere of fo yaft a bigiefifs, as long as ', tis without motion, or at leat, has buta very flow one; than to attribute unto it fuch an incredible celerity, as is altogether: difproportionable to its bignefs.
a. 'Tis; the acknowledgment of Clavius, and might eafily be demonfrated, That if the Centre were fafthed upon the Poile of the World, the Orb wherein he fuppofes the Sun to more, would not be able to reach fo far injtithe eighth Sphere, (being confidered according to $P_{t o l o m y ' s} H$ yporbef(s) as to touch the Pole-ftar: which notwith ftanding, (faith he) is fo near the Pole it Felf, that we can fcarce difcern it to move:, Nay, that Circle which the Pole-ftar makes about the pole, is above four times bigger than the Orb of the Sun, So that according to the opinion of our Adverfaries; though our Earth were at that diftance from the Centre, as they fuppofe the Sun to be; yet would not this Excentrifity make it nearer to any one part of the Firmament, than, the Pole-ftar is to the Pole, which according to his confeflion, is farce fenfible, And therefore according to their opinion, it would caufe very little difference in the appearance: of thofe Stars, the biggeft of whichidpes. not feem to be of above five, Seconds in its Diameter:
3. 'Tis confiderable, That the Spheres of Sathern, Fuppiter, Mars, are, according to the general opinion, of very great extenfion; and yet each of them is appointed only to carry about its particular Planet, which are but very little in comparifon of the fixed Stars. Now if for the frituation of thefe fixed Stars, there fhould be allotted a proportionable part of the World, 'tis certain, that their Orb muft be far bigger than it is commonly fuppofed, and yery near to this Opinion of Copernicus.
4. We ufally jodg the bignefs of the higher Orbs, by their different motions. As becaufe Saturn finifhes his courfe in thirty Years, and Fupiter in twelve, therefore we attribute unto thofe Orbs, fuch a different proportion in their bignefs. Now if by this Rule we fhould find out the quantity of the eighth Sphere, we fhall difcern it to be far nearer unto that bignefs, which Copervicus fuppofeth it to have, than that which Ptolomy, Tyeho, and others, ordinarily afcribe unto it. For the flarry Heaven (fay: they) does not finifh his courfe under 26000 Years; whereas Satuin, which is next unto it, does compars his Orb in thirty Years: From whetice it will probably follow, that there is a very great diftance betwixt thefe in place, becaule they have fuch different termis of their Revolutiens.

Bat againft-this Anfwer: Unto the laft Argument, our Adverfaries thus reply :

## That the Earth minay be a Platiet.

1. If thè fixed Stars be fo far diftant from Fromond: ass that our approaching nearer unto them by 2000000 German miles, do not make aVof trali. ny fenifible difference in their appearance, then $G$ alliteus his Perfpective could not make them feem of a bigger Form, than they do to the bare Eye, which yet is contrary to common experience.
2. From hence it may be inferred, That the leaft fixed Star is bigger than all this Orb wherein we fuppofe the Earth to move; becaufe there is none of them but are of a fenfible bignefs in refpect of the Firmament; whereas this it feems is not.
3. Since God did at firlt create the Stars for the $n f 6$ of all Nations that are ander the whole Heavens, Deut. 4. 19. it might have Ibid. argued fome improvidence in him, if he had made them of fuch vaft magnitudes: whereas they might as well beftow their light and influences, and fo confequently be as ferviceable to that end for which they were appointed, if they had been made with lefs Bodies, and placed nearer unto us. And 'tis a common maxime, that Nature in all her Operations, does avoid fuperfluities, and ufe the moft compendious way.

## 1 anfwer:

1. To the firlt; whether the Perfpective do make the fixed Stars appear bigger than they do to the bare Eye, cannot certainly be concluded, unlefs we had fuch an exact Glafs, by which we might try the experiment. Biat if in this kind we will truft the

## That the Earto jixay be a Plancti．

 Copern， the experience of skilfar Men，that thie bet－ ter the Perfpective is，by fo much the lefs will the fixed Stars appear through fif：being． but as meer Points froit which the Beams of Light do difperfethenfelves likediairsi And Dis commonly affirmed by others，that the Dog－ttar，which feems to be the higgett Star apiongft thofe of the firft Magaitnde； does yet appear thromithis Glars，but as a little Point no tigger：than the fiftieth part of＇Fupiter．Hence it is，that though＇the common Opinion hald the Stars of the firft Magnitade to be two Minntes in their Dia－

tudeeis＇fify Thirts，whitits comptehended in that of the Son 2 to tines．＂inow if the Sur fiere revioyed fo far fromi us，ithati its Diameter would feem but as one bf that namber whereof it now contaits 2760 ；then mut his diftarice fritm as be qi／60．times greater than iogte itis ：which is sallonie，is if we fhould eay，that a Star of the fixth Magnitude is fevered from ps byfothany se－ midianteters of the Earth＇s＇Otb：WBat now accorting to common cohfents tliedifance of the Earth from the Sun，doesicedititin 128 Semididmeters dif the Earth ？and（as was faid before）this frippored diftante of ithe fixed Stars，dots cotmprehend $2160.8 \mathrm{Bemi}-$ diameters of the Eatth＇s Orb；Fromawhente it is＇manifelt，that the Semididifete bf the Earth，in comparifon to its diftarte frotin the Sun，will be almof doubly bidger that the Semidianteter＇of the Earth＇s Orbs！ parifon to this＂diffance of the Stars．But now the Semidiatheter of the Eath，does make very little difference in enappeat－ ance of the Sut，vecaufe we fee conthon Obfervations tyon the Surface of ty lire as exactly true to the fenfe，as lif they wete made＇Fom the Centre of it．Wherefore， that difference which would be made in thefe fixed Stars，by the adtuatlic courfe of the Earth，muft netds be＂thuch thore unob－ fervable，or rather altogether inferlible．

2．The Confequence of this 乲就的施ht，is grounded upon this falle＇flippobtiton，That everyiBody：mut mecemarity：be of an equal extenfion，

That the Earth may be a Planet. extenfion, to that diftance from ;whence there does not appeair any fenfible difference in its quantity. So that when I fee a Bird flying fuch a height in the Air, that my being nearer unto it, or farther from it, by ten or twenty Foot, does not make it feem unto my Eyes either bigger or lefs; then I may conclude, that the Bird mult needs be either ten or $t$ wenty foot thick : Or when I fee the Body of a Tree that may be half mile from me, and perceive that my approaching nearer to it, by thirty or forty paces, does not fenfibly make any different appearances I may theninfer, that the Tree is forty paces thick; with mapy the like abfurd Confequences, that would follow from that Foundation upon which this Argument is bottom'd.
To the third, Ianfwer : 'Tis too miuch prefumption, to conclude that to be fuper:fluous, the urefulnef's of which we do not undertand. There be many fecret Ends ini thefe great Works of Providence, which humane Wifdom cannot reach unto; and as. Solomon fpeaks of thofe things that are under the Sun, fo may we alio of thoofe things that are above it, That no Max iant
Ėcc, 8. 17. find oust the Work of God, for though. a Man laboour to feck it out; Y Yea, further, Thouigh's wife Marn think to know it, jee fiall. bie noit be 'able to find it. He that hath moft infightinto the Works of Nature, is niot able to give a fatisfying reafon, why the Planets or Stars should be placed jatt at this particular di-

## That ibe Earth miay be a Planet.

fánce from the: Earth, and no nearer or farther. And befides, this Argument might as well be urged againft the Hypothefis of Ptoloniy or Tycho, fince the Stars, for ought we know, might have been as ferviceable to us, if they had been placed far nearer than either of thore Authors fuppofe them: A: gain, were there any force in fuch a Confequence, it would as well conclude a great improvidence of Nature, in making fich a multitude of thofe leffer Stars, which have lately been difcovered by the Perfpective. For to what purpofe fhould fo many Lights be created for the ufe of Man, fince his Eyes were not able to difern them? So that out difability to compretiend all thofe ends. which might be aimed at in the Works of Nature, can be no fufficient Argament to prove their fuperfluity: Though Scripture tells us; thiat thefe things were made for our ufe, yet it does not tell us, that this is their only enid: 'Tis not impofible, but that there may be elfewhete fome other Inhabitants, by whom thefe leffer Stars maiy be more plainly difcerned: And (as was faid before) why may not we affirm that of the bignefs, which our Adverfaries do concetn: ing the motion of the Heavens? That God; to fhew his own iminenfity, did put a kind of infinity in the Creature.
There is yet another Argument to this purpofe, urged by * Al. Roff.' which was not * Lib. i: teferred to any of the former kind, becaufe fatia, cit I could farcely believe I did rightrly under-

That the Earth may be a Planet.
fland it : fince he puts it in the froint of his other Arguments, as being of ftrength and fubtilty enough to be a Leader unto all the reft; and yet in the moft likely fenfe of it, 'cis fo extreamly fimple to be preffed in a Controverfy, that every fref Man would laugh at it. The words of it are thefe: Quod minimum off in circulo debst effe centrrum illius, at Trrva longè minor oft Sole, erv etquinotialis Terrefris off ommium in Calo circulus minimus, ergo, \&c.

By the fame reaion, it would rather follow, that the Mion, or Mercwry, were in the Centre, fince both thefe are. lefs than the Earth. And then, whereas be fays, that the Equinoctial of the Earth, is the leaft Circle in the Heavens, 'tis neither true nor pertinent, and would make one furpeet, that he who fhould urge fuch an Argument, did fcarce underftand any thing in Affronomy.
There are many other Objections like unto this, not worth the citing: The chief of all have been already anfwered; by which you may difcern, that there is not any fuch great necefity, as our Adverfaries pretend, why the Earth fhould be fcituated in the midtt of the $U$ niverfe.

T̈bat the Earsh maj be a Rlunet.

Tis probable that the Sinn को in the Centre of: the World

THe chief Reafons for the confirmation of this Truth, are implied in the conveniences of this. Hyppothefis abovie äny other; whereby we may refolve the Motions and Appearances of the Heavens; into more eary and natural Caufes:
Hence will the Frame of Nature be freed from that deformity; which it has according to the Syfeme of Tycho: who though he make the Sun to be in the midft of the Planets, yet; without any good Reafon; tenics it to be in the miditl of the fixed Stars; as if. the Planets; which are fuch eminient parts of the World, fhould be appointed to miove about a diftinct Cenitre of their own,: whicli was befide that of the Univerfe.
Hence likewife are we freed from many of thiofe Inconvieniences in the Hypotbefis of Prolony, who fuppofed in the Heavens, Epicycles and Eccentricks, and other Orbs; which he calls the Deferents of the Apoge and the Peryé: As if Nature, in framing this great Engine of the World, had been put unto fuich hard fhifts; that fhe was fain to mialic ufe of Wheels and Screws; and other.
$\mathrm{H}_{2}$
the

## That the Earth maj be a Tlanet.

 the like Artificial Inftruments of Motion.There be fundry other Particulars, whereby this Opinior concerning the Sun's being in the Centre, may be ftrongly evidenced; Which becaufe they relate unto feveral Motions alfo, cannot therefore properly be infifted on in this place. You may eafily enough difcern them, by confidering the whole Frame of the Heavens, as they are according to the Syfeme of Copervicus; wherein all thofe probable Refolutions that are given for divers appearances amongft the Planets; do mainly depend upon this Suppofition, that the Sun is in thie Ceatre. Which Arguments (were there no other) might be abundantly enough for the confirmation of it. But for the greater plenty, there are likewife thefe Probabilities confiderable.

1. Jt may feem agreeable to reafon, That the Light which is diffufed in feveral Stars through the Circumference of the World, fhould be naore eminently contained, and (as it were) contracted in the Centre of it, which can only be by placing the Sun there.

* In primar 2. 'Tis an Argument of * Claviss, and
cup.spher. frequently urged by our Adverfaries, That the molt natural fituation of the Sun's Body was in the midft, betwixt the other Planets; and that for this Reafon, becaufe from thence he might more conveniently difribute amongtt them both bis Light and Heat.

## That the Earth may be a Planef.

Heat. The force of which, may more properly be applied to prove him in the Centre.
:3.' 'Tis probable that the Planetary Orbs (which are fpecial parts of the Univer $_{f} e$ : do move about the Centre of the World, rather than about any other Centre which is remote fromit. : But now 'tis evident, that the Planets Satturn, Gupittr, Marrs, Venus, MKercury, do, by their Motion, encompafs the Body of the Sun. 'Tis likely therefore that this is fcituated in the midft of the World.
$\therefore$ And as for the three upper Planets, 'tis found, by Obfervation, that they are always neareft to the Earth, when in oppofition to the Sun, and fartheff from us, when in conjunction with it : Which difference is fo eminent, that. Mars in his Perige does appear fixty times bigger, than when he is in the zipoge, and at the greateft diftance,
$\therefore$ Now, that the Revolution of $V$ enus and Mercury alfo is about the Sun, may from hence be evidenced. Firft, Becaure they are never at any great diftance from him. Secondly; Becaule they are feen fometimes a-

H 3 fellent
bove, and fometimes below him. Thirdly, Becaufe Venns, according to her different fcituations, does change her appearance as the Moon.
4. There is yet another Argument, which * Ariffotle himfelf doth repeat from Pythan ${ }^{*} D_{i} C_{a l o} l_{0}$ goras. The moft excellent Body fhould have ${ }^{\text {l.2. } ., 13}$. the beft place : but the Sun is the moft ex, .

That the Earth may be a. Planet: cellent Body, and the Centre is the beft place; therefore tis likely the Sun is in the Centre: In the Frame of Nature (which is fuppofed to beof an orbicolar:Form) there are but two places of any eminency; the Citcumference' and the Centre.' TheiCir-1 cumference being of fo wide a capacity, cannit fo fitly be the peculiar Seat of a Body, that is fol little inreefpet of it : And berdes; that which is the moft excellent part of the World, fiouald be equally' preferved in it felf, and hared in its Vertues by all the other parts, which can only be done, byits being placed in the midfto of them. This is intimated unto us, in that frequent Speech of Plato, that the Soul of the World does refide in the innermolt place of it: And * Satur- that in * wactibius, who oftencompares the nal. iti. I. Sun in the World, to the Heartin a living c.17, \&c. Creature.
llnto this Arifotle anfwers by a difinction: "There is medium magnitskinis, fo the Centre is in the middle of the Sphere : And there is medium natura, or infocrouizozis, which is toot-always the fame with the other; for in this fenfe the Heart is in the middle of a

- Man; becaufe from thence ( faith he) as from the Centre, the vital Spirits are conveyed to all the Members. and yet we know that it is not the Centre of Magnitude, or at an equal diftance from all the other parts.

And befides; the middle is the worft place, beeaufe moft circumfcribed, fince that is

## That the Earth may be a Planct.

more excellent; which does limit any thing, than that which is bounded by it. For this reafon is it, that Matter is amonglt thofe things which are terminated, and Form that which does circumfcribe.
But againft this anfwer of Arifotle, it is again replied:
I. Though it be true, that in living Crea- Kıplar. tures, the beft and chiefeft part is not placed difr. Coalways jaft in the midft; yet this may be, becaufe they are not of an orbicular Form, as the World is.
2. Though that which bounds another thing, be more excellent than that which is terminated by it, yet this does not prove the Centre to be the worlt place, becaufe that is one of the Terms or Limits of a round Body, as well as the Circumference.

There are likewife other Arguments to Maflin. this purpofe, much infifted on by eminent $f$ ra. ad Aftronomers; taken from that Harmoni- Narrat. cal Proportion which there may be be- Rhetrci. twixt the feveral diftances and bignefs of mifilarium the Orbs, if we fuppofe the Sun to be in cifmograthe Centre.
phisism.
For according to this (fay they ) we may conceive an excellent harmony, both in the number and the diftançe of the Planets; (and if God made all other things, numere क.men $f u r \hat{r}_{2}$, much more then thofe greater Works, the Heavens) for then the five Mathematical Bodies, fo much fpoken of by pro\%, ${ }^{* 14 .}$. * Euclid, will bear in them a proportion 15 , \&s. $\mathrm{H}_{4}$
an.

## That the Earth siay be a Planet.

 anfwerable to the feveral diftances of the Planets from one another:Thys a Cube will meafure the diftance betwixt Saturn and fupiter; a Pyranis or Tatraëdron, the ditance betwixt. Jupiter and Mars ; a Dodecaidron, the diftance betwixt Mars and the Eartb;an Icoofaedron, the diffance betwixt the Eartb \& Verus;and an Otioedron, the ditance betwixt Venus \& Mercury : that is, if we conceiye a Circumferrence defrribed immediately without the Cube, and another within it, the diftance between thery two, will fhew what proportional difance there is betwixt the Orb of Saturn, and that of Fupiter. Thus alfo, if you conceive a Circumference defribed on the outfide of a Pyramis, or Tetraedron, and another within it, this will fhew fuch a proportional diftance, as there is betwist the Orb of Mars, from that of Yupiter. And fo of the reft.

Now if any ask why theere are but fix Planetary Orbs? Keplar anfwers, Quia nom oportet plures quàm quingue proportiones effe, totident nempe. quot regularia /unt in Mazbefi corpera. Sex autem termini confummant bunc. proportioitum numerym: Becanfe there are but five proportions, fo many as there are iegular Bodics in Mathematicks, each of whofe Sides and Angles are equal one to another. But now there are fix terms required to confummate this number of proportions; and fo confequently, there can pe but fix primary Plaṇets.

## That the Earth may bo a Planet.

Thus likewife, by placing the Sun in the Centre, we may conceive fuch a proportion betwixt the Bodies of the Planets, as will be anfwerable unto their fevral Spheres: Then Mercury, which has the leaft Orb, will have the lealt Body; $V$ enus bigger than that, but lefs than any of the other; our Earth bigger than Venus, but lefs than the reft ; Mars bigger than the Earth, but lefs than Fupiter ; Fupiter bigger than Mars, and lefs than Saturz; Saturn being the higheft, Ihould alfo be the biggeft. All which Har-: mony would be difturbed, by putting in the Sun amongit them ; and therefore, it may.be more convenient for him to fit ftill in the Centre.

There are fundry other Arguments in: this kind to be found out, by a confideration of this whole Hypothefrs He that does: rightly underfand it; may therein eafily difcern many ftrong Probabilifies, why the Sun fhould be in the midft of the World, rather than in any other Pofition.

PROP,

## PROP VIII.

That there is rot any fufficiene reafon to prove the Earth imcapable of thofe mos tions wobich Copernicus afcribes unto is.

THe two chief Motions in the World, which are more efjecially remarkable above the refl, are :the Diurnal, and Anthand.
The Diurral, which makes the difference betwixt Night and Day, is caured by the Revolution of our Eärth upon its own $A x i_{1}$, in the frace of four and twenty hoors.

The Ansial $l$ "which makes the difference betwixt Winten Cafd Summef, is likewife caured by the Earth, when being carried through the Esfoptick in its own Orb, it fnifhes its courfe in a Year.
The firft is ufually ftiled, Motus Revodur tionis: The fecond, Motus Circumlationis: There is likewife a third, which Copernicus calls, Motrss Inclinationis: But this being throaghly confidered, cannot properly be ftiled a Motion, but rather an Immutability, it being that whereby the $A x i$ of the Earth does always keep paraillel to it felf; from which fituation, it is not its Annual Courfe that does make it in the lealt manner to decline.

## That the Earthmay be a Planet.

As for the Difficulties which concern the fecond of there, they have been already handled in the fixth Propofition, where the Earth's Eccentricity was maintained.
So that the chief bufnefs of this Chapter, is to defend the Earth's Diurnal Motion, againft the Objections of our Adverfaries. Sundry of which Objections, to fpeak: (as the Truth is) dobear in them a great flew of probability, and fuch too (as it. feems) was very efficacions; fince Arijfote and Ptolomy; \&c. Men of excellent Parts, and deep Judgmeants, did ground upon them, as being of infallible apd nerefliary confe quence.
I Hall reckon them up (everally, and fet down fuch Anfwers unto each, as may yield fome fatisfation to every indifferent feeker of Truth.
Firft then, 'tis objected from our fenfes; If the Earth did move, we fhould perceive it. The Weftern Mountains would then appear to afcend towards theStars, rather than the Stars to defcend below them:
I anfwer: The fight judges of Motion, according as any thing does defert the Plane whereon it felf is feated: which Plane every where keeping the fame Ccituation and dittance, in refpect of the Eye, does there-1 fore feem immovable unto it, and the motion will appear in thofe Stars and parts of the Heaven, through which the Vertical Line does pals.

The reafon of fuch deceitmay be this: Motion being not a proper Object of the Sight, nor belonging to any other peculiar Senfe, mult therefore be judged of by the fenfus communis, which is liable to mittake in this refpect; becaufe it apprehends the Eye it felf to reft immovable; whill it does not feel any Effects of this Motion in the Body: As it is when a Man is carried in a Ship; fo that Senfe is but anill Judg of Na tural Secrets.: :Tis a good Rule of Plato,
 ëluv: A Philofopher muft not be carried away by the bare appearance of things to fight, but muft examine them by reafon. If this were a good Confequence, The Earth does not move, becaufe it does not appear fo to us; we might then as well argue, that it does move when we go upon the Water; according to the Verfe :
$\therefore$ Provehimur portu,terraque; verbefq; recedmat.
Or if fuch Arguments would hold, it were an eafy matter to prove the Sun and Moon rot fo big as a Hat, or the fixed Stars as a Candle:
sl. Rof: Yea, but if the Motions of the Heavens
11. fofi.1. be only apparent, and not real, then the
cap. 1. Motion of the Clouds will be fo too, fince the Eye may: be as well deceived in the one as the other.
I anfwer: 'Tis all one, as if he fhould in. fer, that the fenfe was miftaken in every thing,

## That the Earib miay be a Planet.

thing, becaufe it was fo in one thing : And this would be arrexcellent Argument to prove that Opinion of Anaxagoras, that the Snow was black.

The reafon why that motion which is cauled by the Earth, does appear as if it were in the Heavens, is, becaule the fenfus communis, in judging of it, does conceive the Eye to be it felf immovable, (as was faid before) there being no fenfe that does difcern the effects of any motion in the Body; and therefore, it does conclude every thing to move, which it does perceive ta change its diftance from it: So that the Clouds do not feem to move fometines, when as notwithtianding they are every where carried about with our Earth, by fuch a fwift revolution; yet this can be no hindrance at all, why we may not judg aright of their other particular Motions, for which there is not the fame reafon. Though to a Man in aShip, the Trees and Banks may feem.to move; yet it would be but a weak Argument, to conclude from thence, that therefore fuch a one could not tell whether his Friend does really ftir, whom he fees to walk up and down in the Ship: or that he might as well be deceived in judgiry the Oars to move, when they do not.
'Tis again replied by the fame Objector, That it is not credible, the Eye Chould be miftaken in judging of the Stars and. Heavens; becaufe thofe being light Bodies, are the primary \& proper Objects of that Senfe.

Ianfwer: The deceit here is not con ${ }^{-}$ cerning the Light or Colour of thofe Bodies? but concerning their Motion; which is neither the primary nor proper. Object of the Eye, but reckoned amongit the Objecta Commania.
2. Another common Argument againft this Motion, is taken from the danger that would thence arife unto all high Buildings; which by this would quickly be ruinated and fcattered abroãd.
I anfwer: This Motion is fuppofed to be natural; and thofe things which are according to Nature, have contrary effects to other matters, which are by force and violence. Now it belongs unto things of this latter kind, to be inconftant and hurtful; whereas thofe of the firf kind mult be regular, and tending to confervation. The Motion of the Earth, is always equal and like it felf; not by ftarts and fits. If a Glafs of Beer may ftand firmly enough in a Ship, when it moves fwiftiy upon a fmooth ftream; much lefs then will the Motion of the Earth, which is more natural, and fo confequently more equal, caufe any danger unto thofe Buildings that are erected upon it. And therefore to fufpect any fuch event, would be like the fear of Lactantius; who would not acknowledg the being of any Gilbert.de Antipodes, left then he might be forced to grant that they mould fall down unto the Heavens. We have equal reafon to be afraid

## That the Earth may be a Planet.

above us were whirled about with fuch a mid celerity as our Advetfaries fuppofe; for then there would be but fmall hopes, that this little point of Earth Thould efçape from the reft.
But fuppofing (faith * Roffe) that this cib.1.fite. Motion were natural to the Earth; yet it is I. cap. 3 . not natural to Towns and Buildings, for thefe are Artificial.
To which 1 anfiwer: Ha , ha; ha.
3. Another Argument to this purpofe; is taken from the reft and quietnefs of the Air about us; which could not be, if there were any fuch fwift Motion of the Earth. If dMan riding upon a fleet Horfe, do percive the Air to beat againft his Face, as if there were a Wind, what a vehement Terripeft fhould we continually feel from the Eaft, if the Earth were turned about with fuch a fwift revolution as is fuppored?
Unto this 'tis ufually anfwered, That the Air alfo is carried along with the fame motion of the Earth : For if the Concavity of the Moon's Orb, which is of fo fimooth and glabrous a Superficies, may (according to our Adverfaries) drive along with it the greateft part of thir Etementary World, all the Regions of Fire, and all the vaft upper Regions of Air, and (as fome will have it) the two lower Regions, together with the Sea likewife; for from hence ( Iaith Alex. Roffe, lib. i. fect. I. cap. 3.) is it; that betwixt the Tropicks there is a conflant Eaftern Wind, and a continual flowing of the Sea of high Buildings, if the whole World

Weftward: I fay; if the Motion of thie Heavens, which are fmooth Bodies, may be able to carry with it fo great a part of the Elementary World: or if the rugged parts of the Moon's Body, be able to carry with it fo great a part of the Air, as Fromondus (Ant. c.16.) affirms; much more then may our Earth, which is a rugged mountanous Body, te able to turn about fo little a part of the World; as that vaporous Air next unto it.

Suppore the inward Circle to reprefent the Earth; and the outward, the thicker Air which encompaffes it. Now it is eafily conceivable, that the revolution of fo great a Body as this Globe of Earth, may turn abdut
aboitt by its meer motion, ( if there were: nothing elfe:): fo little a part of the idjoin: ing, Air as is here reprefented: And yet, - I. The difproportion betwixt the thicknefs of the ${ }_{i j}$ Elarths and this Orb of Air, is far greater than could be expreft in the Figure, being but as twenty miles, which is at moft the thicknefs of this Air, unto 3456 miles, which is the Semidiameter of our Earth, and fo is but as an infenfible number. in refpect of this other:
2. Befides the meer metion of the Earth; which in probability (being fuch a rugged Body) wight be enough ta carry fo little a part of the Air along with it; there is alfo (as we fuppofe) a magnetical vigour which proceeds from it; whereby 'tis more able to make all things that are near unto it, to ob: ferve the fame Revolution:

But if it be fo (faith * Alex: Roff.) that:* Lib. it not only the Man, but the Medium alfo, and fett. r.c. 5 . the Object be: moved, this mult needs be. fuch a great:hindrance to the fight, that the Eye cannot judg exaftly of any thing. For fuppofe the Man alone to be in a motion, he tould not fee fo well as when he is fill ; but now, if not only he, but his Spectacles;
and Book; were all moved and Book; were all moved; he would not be able to difcern any thing dittinctly.
I anfwer: The Confequence were pertinent, if all thefe were feveral motions : but if the Subject, and Medium, and Object; were all carried with one and the fame equal motion, (as it is here.fuppofed) this conld it. would be all ome with the reff; becaufe by this means, they. are not revered from one another' 3 and therefore the fpecies are not difturbed. . 'Tis an excellent laying of * Galileres, and may ferve for the refolutieatenus tanquàm motises opirratior, iquatennes rela tionem habet adras res que ipfo defitusurur; in iis verò rebus, que toto aqualiter de ea paricicipant, nibil operatur, efr ita fe habet acf fonkllus effer. If a Man be within fome Room of a Ship, he may read altogether as eafily when the Ship moves; as when it fands ftill.

4Another Argument againft this circular motion of the Eirth; is grounded upon that common Principle amongit the Ariftotelians; Unirs corporis fimplicis ienus tastrum ef motus: One kind of Body; has but one kind of Motion. But now; the Earth and Water hath a motion of defcent? the Air, a motion of afcent; and therefore none of them can have any circular motion natural unto them.

I anfwer: Firft; Thefe right Motions of Elementary Bodies, belong only to the parts of them; and that too when they are out of their proper places; fo that the whole to which they belong; may; notwindiftanding this, have another Motion of its own. But, fecondly, this faying which Arifotle calls a Principle, will not confift with other exident Experiments of Nature. Thus, though

That the Earth may be a Plawef.
a Loadfone; in refpect of its matter and condenfity, naturally tends downward; yet this does not hinder, but that in refpect of fome other qualities; as its delire of union and coition to another Loadftoné, it may alco näturally move upwards. ., From whence it will follows that the fame Elementary Body; may have divers natural Motions:
5. The gravity and magnitude of this Earthy Globe, do make it altogether unfit for fo fivift a Motion.

I anfwer: Firft, Heävinefs can only be applied into thofe Bodies which are out of their proper places; or unto fuch parts as are fevered from the whole to which they belong. And therefore the Globe of Earth; confidered as whole, and in its right place, cannot truly be called heavy: I deny not; but that there is in it, and to likewife in the other Planets, an inepritude to motion, by reafon of the matter and condenlity of their Bodies: And fo likewife there is, äs truly; (though not according to the fame degrees) in the leaft particle of a material condenfed Subitance: fo that this cannot reatonably be pretended as a juft Impediment; why the Earth fhould be incapable of fuch a Motion. Secondly; And though this Globe be of fo vaft a magnitude; yet; as Náture beftows upon other Creatures (for intance; an Eagle and a Fly ) Spirits; and motive Powers; proportionable to their.feverial Bodies: fol likewife may the endow

## That the Earth may be a Planet.

the Earth with a motive Faculty anfwerable to its greatnefs. Or if this may make the Earth incapable of fo fwift a motion as is fuppofed, much more then will the Heavens be difabled for that greater fwiftnefs which is imagined in them. I might add, the Globe of the Sun, and Fupiter, are obferved to move about their own Centres; and therefore the Earth, which is far lefs than either of them, is not, by reafon of its too great magnitude, made unfit for fuch a Revolution. Thirdly, As for the fwiftnefs of the Earth's Courfe, it does not exceed (all Circumftances well confidered) the celerity of fome other Motions, with which we are acquainted; as that of the Clouds, when driven by a tempertuous Wind; that
isuefin
prafat.ad
Nirrat.
ciper.
Fremond. $V i f$.s.
2r.tit.1.
s. $2 \cdot 3$. of a Bullet hot from a Canon, which in the fpace of a minute flies four miles. Or, as another hath obferved, in the fecond fcruple of an hour, it may pafs the fifteenth part of a German mile: Than which, there is not any Point in the Earth's Equino:tial that moves fafter ; and though a Bullet be much flower in moving a greater diftance, yet for fo littic a fpace, while the force of the Powder is moft frelh and powerful, it does equal the fwiftnefs of the Earth. And yet,

1. A Bullet, or Cloud, is carried in its whole Body, being fain to break its way through the Air round about it : but now the Earth (in refpect of this firlt Motion) does remain fill in the fame fcitur ation,

## That the Earth mag be a Planet.

 ation, and move only about its own Center.2. The Motion of a Bullet is violent, and againft its Nature, which does ftrongly incline it to move downwards. Whereas the Earth being confidered as whole, and in its proper place, is not heavy, nor does it contain any repugnancy to a Circular Motion.
3. The chief Argument on which our Adverfaries do moft infift, is this: If there Arifor. de were fuch a Motion of the Earth as is fup- $c_{a t b}, i, 2$. pofed; then thofe Bodies which are fevered ${ }^{\text {c.13. }}$ from it in the Air, would be forfaken by it. The Clouds would feem to rife and fet as the Stars. The Birds would be carried away from their Nelts. No heavy Body could fall perpendicular. An Arrow or Bullet being hot from Eait to Welt, by the fame violence, will not be carried an equal diftance from us, but we hould, by the revolution of our Earth, overtake that which was thot to the Eaft, before it could fall. If a Man, leaping up, flould abide in the Air but one fecond fcruple of an hour, or the fixtieth part of a minute, the Earth, in that fpace, would withdraw it felf from him almoft a quarter of a mile. All, thefe, and many other fuch ftrange Inferences, which are directly contrary to fenfe and expe+ rience, would follow from this motion $9 \hat{f}$ the Earth:

## That the Earth may be a Planet.

There are three feveral ways moit frequently ufed for the refolving of thefe kind of Doubts.

1: From thofe Magnetical Qualities, which all Elementary Bodies do par: take of.
2. From the like motions of other thipgs within the foom of a Failing Ship. :
3. From the like participation of motion in the open parts of a Sbip:

1. For thofe Magnetical Properties, with which all thefe Bodies are endowed.' For the better underftanding of this, you malt know; That befides thofe common Ekementary Qualities of Heat, Coldnefs; Drinefs, Moiftare, cor. which arife from the pre: dominancy of feveral Elemepes, thereare likewife other Qualities (not fo well known to the Ancients) which we call Magnetical; of which every Particle in the Terrefurial Globe does neceffarily participate and whether it be joined to this Globe by continuity or contiguity ; or whether it befevered from it, "as the clouds in the fecond Region, a Bird, or Bullet in the Airy yet does it fill retain its Magnetical Qualities, together with all thofe Operations that proceed from them.
"Now from thefe Properties do we fuppofe the Circular Motion of the Earth to arife.
If you ask, What Probabilities thereare, to prove that the Earth is endowed with any fuch affections? I anfwer: 'Tis likely, that

That the Earth 架ag pe A PLanct.
the lower parts of this, Globe, do not cone Git of fuch a foft fructifying Earth, as there is in the Surface, (becaure there can, be yo fuch ufe for it as here, and Nature does nothing in vain) but rather of fome has d rocky fubitance, fince we may well conceive, that the lo lower parts are prefled clofe together, by the weight of all thofe heapy Bodies above them Now tis probable, that this rocky subitance is a poadtone, ra; ther than a, Fafpis, Adavyatt, Aifarble, or any other $;$ becaufe experience teacheth ps; that the Earth and Loadfone do agree to gether in fo many Properties: Suppofe a Man were to judg the Matter of divefo Bo: dies; each of which fhould be wrap'd up in fome covering from his Eye to that he might poly examine them by fome other putward ligns: If in this examination, he fhould ind any particular Body which had all the properties that are peculiar to a Loaditone, he would in reaton condude it to be of that Natore, rather than any other. Now there is altogether as much reatov why we foould infer, that the inward parts of the Eaith do confift of a Magnetical'Subftance. The agreement of thefe two, you may fee largely fet forth in the Treatife of Dr. Gilbert. I will infance only in one Example, which of it felf may fufficiently evidence, that the Globe of Earth does partake of the like affections with the Loadftone. In the Mariner's Needies you may pbferve the Magnetical Motions of Direnti-

## That the Eaith insay be-a Plancet.

ein, Yariations Declination ; thé two lat of which are found to be indifferest:; according to the variety of places. Now his diffetence cannot proceed fromi the Nedle it felf," becaife "that is the fame every where: Nor can we well coticeive how it: flould be caufed by the Heavens; for thein' the Variafión would fot" be alway'safike ir the fame plate, but diveffe, according to thofe feveyal parts of the Heaven, which at feveral times fhould happè̀t to be ovér it: And thèrefore it müft treceflarily proceed from the Earth, which being it felfendowed with Maggietical Affectionss, does diverfly diriofe the Motions of the Needie, according to the diference of that difponent virtue, which is in its feveral parts:
No N, to appry this unto the particilar Infances of the Objection: We fay, though fome part's of this' feat Magiet, the Eatth, may', according to their Matter, be fevered frof the whole'; yet are they always joined to it,' $b$ 'y a communion of the fame Magnetical Qualities; and do no lefs obferve there kind of Mótions, when they are feparated from the wliole, than if they were united to it. ' No neted this feem incredible, that a hëayy Butletth fuch a fwift violent courfe; Thould 'bet able to obferve this Magnetical Revolutition of the whole Earth; when as we'fee that thofe great Bodies of Sathrn, Fupiter, 0 ci hanging in the valt faces of the 厄therrial Air, do fo conftantly and regularly move on in their appointed courfes. Thongh

## That the Earth may bè a Planet.

Though we could not hew any fimilitude of this Motion in thefe inferior Bodies, with which we are acquainted; yet we muft know, there may be many things which agree to the whole Frame, that are not difcernable in divers parts of it. Tis natural anto the Sea to ebb and fow, but yet there is not this Motion in every drop or bucket of Water. So if we confider every part of our Bodies feverally, the Humors, Bones, Flefh, Ecc. they are all of them apt to tend downwards, as being of a condenfed Matter; but yet confider them according to the whole Frame, and then the Blood or Humors may naturaily afcend upvivards to the Head, as vvell as defcend to any of the lovver parts. Thus the vvhole Earth may moye round, though the feveral parts of it have not any fuch particular Revolution of theit ovwn. Thus likevvif," though each condenfed Body being confidered by it 1 felf; may feem to have only a Motion of defcent? yet in reference to that vvhole Frame, of yvhich it is a part, it may alfo partake of another Motion that may be natural unj to it.

But fome may here object: Though the Earth vvere endovved vvith fuch Magnetical Affections, yct vwhat probability is there that it hould have fuch a Revolution ? I anfver': 'Tis obferved of thole other Magnietical Bodies of Saturn, Fupiter, and the Sun, that they are carried about their ovvri Centers; and therefore 'tis not imprabable;
but thatit may befovviththe Eath plfo： which if 昭y deny，he muff fherv a reas， fon yviy in this refpet：they fhould be unlike．

Yea，butw thaggh they Earth did move round，what groupd is there topffirm，that thofe Bodies uvbich are ferered from it，as a Bullet or the clouds doould follow it in the fame courle ？

I anfver：Thofe Spots whhich are difon vered about the Spo，and are thought to be Clouds or Exaporations from his Body，are oblerved to be carried abost according to bis Revolution Thus tha Mopon is turned round by our Earth；the frow felfer Pdanets by the Body of fupiter．Nay，thus all the planets int their feveral orts，are moyed：a－ bont by：the Retrolution off the Sun upon its opva－Axis（fath Keplor）and there－ fore much more may ar Arrow，or But－ let，be carried toued by the MagneticalMo－ tion of our Earth．
$\because$ The fecond wvay，whereby fome anfver unto she foftances of this Argumentin：is； by ferwipg the like Motions of other things，within fome Room of a failing Ship， Thus Experience teaches；（fay they）that a Candles as alfo the Fumes that come from it，will always keep the fame fcituation，in the 解保ef motion of a Ship，as if it did reft inmpably，and the Flame will not more efpecially bend one way，or haye any troubled fuctuation，but burn as ftreight and quietly，as if it did fand flill．＂Again，it

That the Earth may be a Planet．
bas been found，（fay thofe that have been yerfed in thefe kind of Experiments）that the fame force will calt a Bopty hut anequat diftance，whether or no the Body do movo ＂with，or againt the motion of the ship As alfo，that any Weightheing det fall，will defcend in as true a perpendicular，as if the Ship did ftand ftill．If a Man leaping up，do tarry in the Air one fecond frryple of an hour yet the ship will not，in its greateft fwifthers（as it ohould according to the calculation of our Advestaries）be car reed from time at leaft fifteen foot．＇If we fuppofe a Man to jump in Such a ship，能 will not be able to pals；farther，when he jumps againet the motion of it，than when he jumps with it Al which Partiplare may argue，that the efethigs are carried a long tegether，by the common motion of the ship．Now if Bodies may be the joint－ ly moved by fuch a pretexparpral motion， much moge then will they accompany the Earth in its Diurnal Revolution，Which we fuppofe to be natural untitithem，and．
as a Law impoled by Godity theirfire Crear： tion．

If the Flame of a Gandfe，or the Smpke that comes from it，（things that are fo ea－ fily moveable）are，notwithifandinggarried fo equally，and without any difurbanoe，by the motion of a Ship ithen alfo fhe Clouds in the Air，and all other light Bodies may well enough be turned about by the Revolu－ tion of our Earth．

$\qquad$
$\qquad$
$\qquad$

If an equal force will calt an heavy Body but at an equal diftance, whether or no it move with, or againft the motion of the Ship; then may we eafily conceive, that an Arrow, or Bullet, being fhot with the fame violence, will pals but the fame fpace on the Earth, whether or no it be fhot towards the Eaft or Weft.
If a heavy Body', while the Ship does move, will fatl down in a ftreight Line; then it is not the Revolution of our Earth that can hinder a perpendicular defcent.
If a Man, leaping up in a Ship, may abide in the Air one fecord feruple of an hour, and yet this Ship, in its greatelt fwiftnefs, not withdraw it, felf fifteen foot; then will not the Earth, in that fpace, go from him älmoft a quarter of a mile.
Fromond. "Bit againft this, ${ }^{3}$ tis Objected; That the
Veffs. Eirth has the fimilitude of an open Ship, and
frstá 2.
c40.20
not of any Rooh that is clofe. And tho it betrue, that when the Roof and the Walls do all move together, the Air which is inchuded betwixt theth, muit be carried along bo the fame motion', yet it is not 50 with the Earth, becaufe that hath not any fuch Walls or Roof, wherein it may contain and carry along with it the Mediumi, And therefore Experience will rather argue againft this fuppofed Revolution. Thus 'tis obferved, that atone being let fall from the Maftof a Ship that moves fwifty, will not deftend to the fame point, as if the Ship. did fland fill. From whence it will follow, that

That the Earth maj be a Planet:
that if our Earth had fuch a Circular Motion, then any heayy Body, being let fall from fome high Tower, or other feep place, would not defcend unto that point of Earth which was directly under it at the beginning.

To this we anfwer: That the Air which moves along with our Earth, is as well limited in certain bounds, as that which is included in a Room. If you ask where thefe Bounds are terminated: $I$ anfwer, Neither by the utmoft parts of the World, nor yet by the Concavity of the Moon's Orb, (as Fromondus would have us affirm) but by the Sphere of vaporous Air that encompafles our Earth; or which is all one, by the Orb of Magnetical Vigour, which proceeds frors it. And befides, 'tis conifiderable, that all Earthly Bodies are not only contained within thefe limits,as things are in a clofe Room, but alfo as parts in that Whole to which they belong.
2. Though the carrying along of the. Me-
ium, may folve the motion of light Bodies
2. Though the carrying along of the. Me-
dium, may folve the motion of light Bodies in a Ship, as the Flame of a Candle, Smoke, in a Ship, as the Flame of a Candle, Smoke,
or the like, yet this cannot concur to that which hath been faid of heavy Bodies, as a Man leaping up, a Bullet defcending, ơr. fince it is not the motion of the meer Air that is able to make thele partake of the fame motion with the Ship:-Unto that Argument which he turges from the Experiment of a Stone falling in an openShip: We anfiver:
 $0^{\circ}$ -

r. Though

- ter Thoughthe infance of a Ship, may Ferve as a proof for this opinion; it being an Argomentya misoniad mijems, froman acdidenital Motion; to a natiorals' pet is will not ferve ägainat it. For though it were not thus in accidental Motions; yet this srouid not hander but that it might be fo in thofe that are fappofed to be proper and natural:

2. As for that Experiment itfelf, 'tis but a groundlefs imaginations and was never yet Confirmed by any particular Experience; becaufe 'tis cerrain the Event would be clean othervife; as hath be provied in the third way of anfikering:
3. The thirctand laft way of clearing the Doubts in the fixith Árgamient; is, by flewing the like pairticipation of motionjin thiofe things that are in the operi parts of a Ship. Sff.Marr- To which purpofe Gafilais urges this Ex-
periment : "fr any one fhould let fall a Stone from an high Matt, he would find, Lapdem in entrutem ferpier Navis lociuno deciders, Seut
 tux: Thar the Stane would almays defcend unto the very fanie place, whether or no the Ship did noweie of fland fitl. The Reafor of which is becainfe the Motion of the Ship is likewife nupreffed in the Stöne:which Imprefion is rot equallly prevalent in a light Body; wis a Feattert, or Wool;' becaufe the Air, which tase power over them; is not catried aloure by the fame motion of the Ship: Thus likewife will it be in this other experi-
experinent ; Tf a Man upon a funning Horfe; fhould; in his fwifteft courfe, lee falla Billet, or stone, thefe heary Bodies, befides their owin defreit, woukdalfo participate that trander fe motioniof the Horfe: For as thofe things thet are throwin from as, do continae their metion when' they are out of the hánd in the oper airt fo likewite mult it be, when the force is counferred by that motion which the Arm: fids from the Horfe. While a Man is rieding ithis Apm is allo carried by the fame fwiftnefs of the Horfe; therefore, if he fhould only open his Hand, andele fall any thing, it would not defcend ind ftrait Lhe, but muit neceffarily be didien forwatd, by reafon of that force imptifitd in it by the fwiftnefs of the Horfe, whith is alfo cemmunicated to the Arm; it bting all aneilineffect, whether or no the Armbly moved bria particular motion of its oweh i as it is in cauting of things from us, or byete commpm; motion of the Body, as it ising dropping; any thing from us, either when we are on the top of fome failing Ship, as in the former, or on fome running Horse, as in thelatete Inflance:
What hath been faid cortctuing the Motion of deforst, is: likevilie apipllithe; thoth to that vabich is iupmions, and that which is tradijuerfat. So that vuthen chisiobjected; If the Earth did move, then a Btallet the were fhot up perpendicularly; would be forfaken by it, and not deftenid toithe pilace from whence it arofe: Weinforer; That ther vvith the Bullet in it, do partake of the fame Circular Motion vvith the Earth; and this perhaps our Adverfaries vvill gratit, vvhilft vve fuppofe the Bullet to remain ftill in the Cannon, all the difficulty vvill be, to fhew hovv; it muft neceffarily oblerve the fame motion, vven it is fhot out into the open Air.
Galiil. Sy/ . For the better explication of this,you may
Crlog.2. note this folloving Figure.

Where wve fuppore $A C$ to be a Cannon perpendicularly erected, vvith a Bullet in it at B; which if it vvere immovable, vve grant that the Bullet being difcharged, mult afcend in a jut perpendicular: Bat novv, conceive this Cannon to move along with the Earth, then in that fpace of time, vvhile the Bullet, by the force of the Poovder, is afcending to the top of the Bores the Gan-
non will be transferred to the fcituation D E; fo that the Bullet mult be moved according to the Line F G, which is not directly upright, but fomewhat declining. Now, the motion of the Bullet in the Air; muit neceflarily be conformed unto that direction that is impreffed in it by the Cannon from whence it is fhot, and fo confequently it mult be continued; according ta the Line F G, and therefore will always keep perpendicularly over the Point from which it did afcend.

If you reply, That the motion of the Bullet in the Cannon; muft needs be fo fwift, that the Earth cannot carry the Cannon from $C$ to $E$, in the fame face of time wherein the Bullet does move from $B$ to $A$.
I anfwer: 'Tis not material whether the Earth be of a greater or leffer fwiftnefs than the Bullet, becaufe the Declination muft always be proportionable to the motion of the Earth; and if we fuppofe this to be lower than the Bullet; then the Declindtion of the Eine F G, will be fo much the lefs.

This Truth may. yet further be illuitrated by the practice of thofe Fowlers, wha ufe to kill Birds as they are fying: Concerning which Art;'tis commonly thought, that thefe Men direct their Aims to fome certain fpace in the Air, juft before the Birds, where they conceive the Shot will meet with them in their, flight; whereas, the truth is; they proceed in this cafe, the very fame way as if the

That the Earth may be'a Planet.
Birds did ftand ftill, by a dirett ainaing at their Bodies, and following of their flight by the motion of the Piece; till at length, having got a perfect aim, they difcharge, and do hit altogether as furely, as if the Birds were firting upon a Tree. From whence we may obferve, that the motion of the Piece, as in our aiming, it is made to follow the Birds in their fight, (though it be but flow) yet is communicated to the Bullet in the Air.

But here it may feem very difficult to give any reafon, according to thofe groundsconcerning the fight of Birds; which being animated, have a liberty to fly here or there, to tarry, for a good fpace of time, in the open Air; and fo 'tis not eafy to conceive what means there is, by which they fhould paticipate of the Earth's Diurnal Revolution.

To this Gallileus anfwers, That the motion of the Air, as it does turn about the Clouds, fo doth it alfo carry with it the Birds, together with fuch other like things that are in it. For if fome violent. Wind be able to drive, with fuch fwiftnefs, a full laden Ship, to throw down Towers, to turn up Trees, and the like; much more then may the Diurnal Motion of the Air (which does fo far exceed in fwifnefs the moftempeltuous Wind) be able to carry with it the Bodies of Birds.

But if all things be turned about by this Revolution, then it fhould feem there is no

That the Eatth nidy be a Plaket.
fuch thing as a right Motion, whether of AF cent or Defcent, in a ftreight Line:

I anfwer : The moving of heavy of light Sol. Bodies, may.be confidered in a double rela: tion.

1. According to the fpace wherein they move, and then we grant their Motions not to be fimple, but mixed of a direct and circular.
2. Accotding to the Body or mediums wherein they move; and then they may pro= perly be faid to have right motions, becaufe they pafs through the medium in a freight Line $;$ and therefore it is, that unto us they freem diredty to afcend or defcend. Atriftothe himfelf would not deny, but that Fire may afcend in a frreight Line unto its Sphere; and yet participate alfo of that Circular Motion which he fappofes to be communica= ted from the Heavens, unto the upper part of the Air, and its owni Region. So likewife mult it be for the defcent of any thing. Suppofe a Ship in its fwifteft motion, and a Manin it, having fome Veffel filled with Water, fhould let fall into it a little Ball of Wax, or fome other matter which may be How in its finking, fo that in one minute it fhould farce defcend the fpace of a Cubit, though the Ship (it may be) in the fame time may pafs at leaft a hundred Cubits; Yet would this ftill feem unto the eye to defcend in a ftreight Line; and the other motion, which is cormunicated unto it by the Ship, would not at all be-difernable to it:

And

And though in this cafe, the motion were in it felf compofed of a circular and direct; yet in refpect of us it would appear, and fo might be ftiled exactly ftreight.

Now if it be thus in thofe which are generally granted to be preternatural Motions; we need not doubt then the poflibility of the like effect in that Motion which. we conceive to be proper and natural, both to the Earth, and the things that belong unto it.

There is yet another Objection to this *asfrize purpofe urged by * Malapertius, a late Jenefs prefs this Argument concerning a Bullet or Stone, againft the Opinion of Copernicus; yet he grants that it might eafily be refolved, if the defenders of it would affirm that the Air did move round with the Earth. But this (faith he) they dare not avouch; for then the Comets would always feem to ftand ftill, being carried about with the Revolution of this Air, and then they could not rife or fet, as experience lhews. they do.

To this it may be anfwered, That moft Conets are above that Sphere of Air which is turned round with our Earth, as is manifeft by their height. The motion that appears in them, is caufed by the Revolution of our Earth, whereby we are turned from them.

As for thofe which are within the Orb of our Air, thefe do feem to fland fill. Such

## That the Earth may be a Plinet.

a one was that mentioned by + fodfepbus, which did conftantly hang over Fertfalem; and that likewife which appeared about the time of 'Agrippa's death, and for many days together did hang over the City of Rome. Wherefore * Seneca does well diftinguifh out ${ }^{*}$ Nat. Qus. of Epigenes, betwixt two forts of Comets, l.7. c.6. the one being low, and fuch as feems immovable; the other higher, and fuch as did conftantly oblerve their rilings and fettings, as the Stars.

Thave done with all the Arguments of any note or difficulcy, that are urged againft this diurnal motion of the Earth. Many other Cavils there are not worth the naming; which difcover themfelves to be rather the Objections of a captious, than a doubtful mind: $\because$ Amongit which, I might jufly pars over thofe that are fet down by * Alex: Roffe: * Lid r. But becaufe this Author does proceed in fact.3. c.6. his whole with fo much fcorn and triumph, it will not be amifs therefore to examine what infallible evidence there is in thofe Arguments upon which he grounds his boaftings.

We have, in one Chapter, no lefs thon thefe nine.

Ang. I. If the-Earth did move, then would it be hotter than the Water, becaufe motion does produce heat; and for this reaIon likewife, the Water would 'be' fo' hot and rarified, that it could not be congealed; fince that alfo does partake of the fame motion with the Earth.

```
*Nat+O.0
```

## That we Earth may be a Planet.

Argiz. The Air which is next the Earth; would be purer, as being rarified with Motion.
Arg. 3. If the Earth did move the Air, it would caufe fome found ; but this is no more audible, than Pythayorus his Harmony of the Heavens.

Arg. 4. 'Twould have been in vain for Nature to have endowed the Heavens with all conditions requifite for motion, if they had been to ftand fill: : As firft they have a round Figure. Secondly, They haye peither gravity nor levity, Thirdly, They are incorruptible. $\because$ Fourthly; They have no contrary,

Arg. 5. All smilary parts are of the fame pature with the whole: Buteach part of the Earth does reft in its place itherefore alfo doth the whole 1

Arg, 6. The Sun in the World, is as the Heart in a Man's Body: But the Motion of the Heart ceafing, none of the Members do ftir ; therefore alfoif the Sun flould fland ftill, the other parts of the World would be without motion.

Arg. 7, The Sun and Heavens do work upon thefe inferior Bodies by their Light and Mofion. So the Moon does operate upon the Sca.

Arg. . The Earthis the Foundation of Buildingt: and therefore muot be frm and ftable,,
Acg. 9. ${ }^{2}$ Tis the genfantopiniop of $D$ vines, that the Heavens fall ref after the
Day

That the Earth may be a Planet.
Day of Judgment; which they prove from Ifa. '60:' 20: Thy Sum flall no more go down, neither fhall thy Moon mithdraro it felf. So likewife, Rev. Io.6. The Angel fwears, that there fhall be time no longer: and therefore the Heavens muft reft, lince by their motion it is that Time is meafured. And St. Panl fays, Rom. 8.20. That all the Creatures are made fubjett to Venity. Now this can be no other in the Heavens, than the Vanity of Motion, which the Wife Man:fpeaks of, Ecclef, I. 4. The San rifeth, and the Sun goeth idom, \& \&c.

To there it may be anfwered :
$\operatorname{Ad} \mathrm{I}, 062$. In the firlt you may note a manifelt contradition, when he will have the Earth to be hotter than the Water, by reafon of this motion; when as notwithftanding be acknowtedges the Water to move along with it; and therefore too, in the next line, he infers that the Water, becaufe of that heat and rarefaction which it receives from this, motion with the Earth, muit be incapable of fo much cold, as to be congealed into Ice.

But unto that which may be conceived to be bis meaning in this and the next Argument : I anfwer, If he had fully underfood this Opinion which he oppofes, he would eafily have apprehended, that it could not be prejudiced by either of thefe Confequences. For we fuppore, that not only this Globe of Earth and Water, but allo all the vaporous Air which invirons it, are carried K 4 along.
along by the fame motion. And therefore; though what he fays concerning the heat, which would be produced by fuch a motion, vvere true; ; yet it viould not be pertinent, fince our Earth and Water, and the Air next unto them, are not by this means fevered from one another, and fo do not come zvithin the compars of this Argument.

If any reply, That this yvill notwithflanding hold true, concerning the upper part of the Air, vyhere there is fuch a feparation of one Body from another; and fo confequently, an anfiverable heat. I anfver';
i. 'Tis not generally granted, That mo- ${ }^{\wedge}$ tion in all kind of Bodies does produce heat; fome reftrain it only to folid Bodies; affirming, That in thofe vvhich are fluid, it is rather the caufe of coldnefs. This is the reafon (fay thiey) vvhy ruining Waters are ever to our fenfe the cooleft : And why amongtt thofe Winds wvhich proceed from the fame Coafts of Heaven, about the fame time of the Year, the ftrongeft alvvays is the coldeft? If you object, that running Waters are not fo foon frozen as others : They anfiver, This is not becaufe they are. thereby heated ; bat becaufe unto congelation, it is requifite that a Body fhould fettle adnd reft, as vell as be cold.
2. If vie thould grant a moderate heat in thofe parts of the Air, vve have not any expcriment to the contrary, nor vvould it

That the Earth may be a Planet.
prejudice the prefent Opinion, orcommon Principles.

Ad 3. As the found of this Motion is not more heard, than the Harmony of the Heavens: fo neither is there any reafon vwliy this Motion fhould caufe a found, more than the fuppofed Motion of the Heavens, vvhich is likevvife thought to be continued unto the Air lard by us.
Ad 4 . This vvill prove the Earth to move as vvell as the Heavens; For that has, firft, a round Figure, as is generally granted. Secondly, Being confidered as vwhole, and in its proper place, it is not heavy, as vvas proved before : and as for the twvo other conditions, neither are they true of the Heavens; nor if they veere, woould they at alliconduce to their Motion.
Ad 5. This Argument vvould prove that the Sea did not ebb and flow, becaufe there is not the fame kind of motion in every drop of Water : or that the whole Earth is not Ipherical, becaufe every little piece of it is not of the fame Form.

Ad 6. This is rather an Illuffration than a Proof; or if it do prove any thing, it may ferve as well for that purpofe unto which it is afterward applied, where the motion of every Planet is fuppofed to depend upon the revolution of the Sun.

Ad. 7 . That the Sun and Planets do work upon the Earth by their own real daily motion, is the thing in queftion; and therefore muft not be taken for a common Ground.

Ad 8. We grant, that the Earth is firm and ftable from all fuch motions, wherebs it is jogged, or uncertainly fhaken.
Ad 9. 1. For the anthority of thofe Divines, which he urges for the interpretation of thefe Scriptures; this will be but a weak Argument againft that Opinion which is already granted to be a Paradox.
2. The Scriptures themfelves, in their right meaning, will not at all conduce to the prefent purpofe.

As for that in Ifaiah, if we confult the coherence, we fhall find that the fcope of the Prophet, is to fet forth the Glory of the Church Triumphant. Wherein (he fays) there fhall not be any need of the Sun or Moon, but God's prefence fhat Supply them both : For the Lord blall be wrea thee mo everloffing Light, and thy God thy Glory, verf. 19. and as for this Sun and Moon, it fhall not go down, or withdraw it felf; but he fhall be an Everinfting Light, without' intermifion. So that ${ }^{\text {Jis }}$ evident, he fpeaks of that Light which fhall hereafter be, inftead of the Sun and Moon.

As for that in the Reyslations, we yield, that Time fhall cenfe; bat to fay that this depends upon the ceffation of the Heavens, is to beg the Queftion, and to fuppiofe that which is to be proved, viz. that Time is meafured by the Motion of the Heavens,

Ger. c. I.
1.2.qusefl. 6 and not of the Earth. * Perreriss (from whom this laft Argument was borrowed withont acknowledgment) might have told

That the Earth esay be a Planet.
him; in the yery fame place, that Time does not abfolutely, and luniverfally depend upon the Motion of the Heavens, fed in mots d. fucceffione cujufibet durationis, but in:any fuch fuccefion, by which duration may be meafured.

As for that in the Romans, we fay, that there are other Vanities to which the Heavenly Bodies are fubject." As firft, unto many changes and alterations, witnefs thofe Comets, which at feveral times häve been difcerned amongft them ; and then likewife to that general corruption, in which all the Creatures fhall be involved at the latt Day.: When they fhall pafs qway mith a great 2 Pet. 3. noijes and the Elements flosh melt with fervent $\mathrm{IO}_{2} \mathrm{I} 12$. beat.

Thus you fee, there is not any fuch invimqible ftrength in there Arguments, as might caure the Author of them to triumph before-hand with any great noife of viAtory.

Another Objection like unto there, is taken from the Etymology of feveral words. Thus the Heavens are called exthera, ab 'á $\mathcal{N}$ ©iil, becaufe they are always in motion ; and the Earth $V e f t a$, quia vi ftat, becaufe of its immobility.

To which I anfwer: 'Twere no'dificult matter to find fuch proofs for this opinion, as well as againft it.

Thus we may fay, that the Hebrew word YM', is derived from 517 , guia currit; and Terra, non quod teratur, fed quod peremni
curfu omnia terat, faith Calcagnius. However, though we fuppofe the Etymology to be never fo true and genuine, yet it can at the beft but fhew what the more common opinion was of thofe times when fuch nanies were firft impofed.
Ob. But fuppofe all this were fo, That the Earth had fuch a diurnal Revolution; yet how is it conceivable, that it fhould at the fame tinle háve two diftinct Motions.
I anfwer : This may eafily be apprehended, if you confider how both thefe Motions do tend the fame way, from Weft to Eaft. Thus a Bowl being turned out of the hand, has two Motions in the Air ; one, whereby it is carried round ; the other, whereby it is caft forward.

From what hath been delivered in this Chapter, the indifferent Reader may gather fome fatisfaction for thofe Arguments which are ufually urged againft this Diurnal Motion of the Earth.

## PROP. IX.

That it is more probable the Earth does move, than the Suin or Heavens.

AMongit thofe many Arguments that may be urged for the confirmation of this Truth, I fhall only fet down thefe five.
i. If we fuppore the Earth to be the caure of this Motion, then will thofe valt and glorious Bodies of the Heavens, be freed from that inconceivable, unnatural fwiftnefs, which muft otherwife be attributed unto them.

For if the Diurnal Revolution be in the Vid.Maf. Heavens, then it will follow, according to Epit.sfir. the common Hypothefis, that each Star in ${ }^{2} 1, / n$ finc. the Equator, mult in every hour move at the leaft 4529538 German miles. So that according to the obfervation of ${ }^{*}$ Cardan, ${ }^{*}$ De Prop. who tells us, that the Pulfe of a well-tem- Ls prop.s pered Man, does beat 4000 times in an hour; one of the Stars in that fpace, whilft the Pulfe beats once, muft pafs 1132 German miles (faith Alpbraganss): Or, according to Tycho, 732 German miles. But thefe numbers feem to be fomewhat of the leaft ; and therefore many others do much

PROR:

142 . That the Earth may be a Planct.
the Equator, in one beating of the Pulf, mulit more 2528 of thefe miles.
'Tis the Affertion of + Clavius, that though
†Commen. on prim. sap.Sphar. the diftance of the Orbs, and so confequently their fwiftnefs, feem to be altogether incredible; yet it is rather far greater in it felf, than Aftronomers ufually fuppofe it; and yet (faith he) according to the common Grounds, every Star in the Equator, muft move $42398437^{\frac{1}{2}}$ miles in an hour: And though a Man fhould conftantly travel 40 miles a day, yet he would not be able to go fo far as alstar does in one hour, under 2904 Years: Or if we will fuppore an $\mathrm{Ar}-$ row to be of the fame fwiftnefs, then muft it compars this great Globe of Earth and Water 1884 times in an hour. And a Bird that could but fly as faft, might go round the World feven times in that fpace, whillt one could fay, Ave Maria, gyatia plena, Dominus teckm.
Which though it be a pretty round pace, yet you mult conceive that all this is fpoken only of the eighth Sphere ; and fo being compared to the fwiftnefs of the Primum Mobile, is but a flow and heavy Motion.

For (faith the fame Author) the thicknefs of each Orb is equal to the diftance of its concave Superficies from the Centre of the Earth. Thas the Orb of the Moon does contain as much fpace in its thicknefs, as there is betwixt the neareft part of that and the Centre. Thus alfo the eight Sphere
is as thick as that whole face betwixt the Centre of the Earth, and its own concave Superficies. So likewife mult it be in thore three other Orbs, which he fuppofes to be above the flarry Heaven. Now if we proportion their fwiftnefs according to this difference in their bignefs, you may then conceive (if you can) what a kind of celerity that mult.be, by which the Primum Mobile will be whirled about.

Tycho makes the diftance of the Stars to be much lefs, and their motion flower; and yet he is fain to confefs, that it is omni cogitatione celerior.

Clavius likewife, fpeaking concerning the fwiftnefs of the Starry Orb, does acknowledg, Quod velocitas ejus captum hamanis ingenii excedit. What then could he think of the Primum Mobile?

Dr. Gilbert being (it feems) aftonifhed De magat the confideration of this ftrange fwift- nete lib. $G_{4}$ nefs, fays of it, that it is motus fupris oinnes cap.3. cogitationes, fomnia, fabular, ©o licentias poeticas infuperabilis, ineffabilis, incomprebenfibilis. A man may more eafly conceive the polfibility of any Fable or Fiction, how Beafts and Trees might talk together, than how any material Body fhould be moved with fuch a fwiftnefs.

Not but that'tis polfible for God to turn them about with a far greater velocity. Nay, 'tis polfible for Art to contrive a motion, which fhall be equally flow in that proportion as this is fwift. But however, the queftion
queftion here is; not what can be done, but what is moft likely to be done; according to the ufual courfe of Nature. 'Tis the part of a Philofopher, in the refolution of natural Events, not to fly unto the abfolute Power of God, and tell us what he can do, but what, according to the ufual way of Providence, is moft likely to be done, to find out fuch caufes of things, as may feem moft eafy and probable to our reafon:

If you ask, What repugnancy there is in the Heavens, unto fo great a fwiftnefs? We anfwer; Their being fuch vaft, material condenfed Subftances, with which this inconceivable Motion cannot agree.

Since Motion and Magnitude are two fuch Geometrical things, as bear a mutual proportion to one another; therefore it.may feem convenient, that flownefs fhould be more agreeable to a great Body, and fwiftnefs to a leffer : and fo it would be more confonant to the Principles of Nature, that the Earth, which is of a leffer quantity, fhould be appointed to fuch a Motion, as is fomewhat proportionable to its bignefs, than that the Heavens, that are of furch a valt magnitude, fhould be whirled about with fuch an incredible fwiftnees, which does fo far exceed the proportion of their bignefs, as their bignefs does exceed this Earth, that is but as a. Point or Centre to them. 'Tis not likely that Nature; in thefe conftant and great Works, thould fo much deviate from that ufual Harmony and Pro-
portion
portion which he obferves in leffer Matters. If this Globe of Earth only were appointed to move every day round the Orb of the fixed Stars, though it be but a little Body, and fo more capable of a fwift motion; yet that fwiftnefs would be fo extreamly difproportionable unto it, that we could not with reafon conceive it pofible, according to the ufiual courfe of Nature. Butnow, that the Heavens themfelves; of fuch ftrange bignefs, with fo many Stars, which do fo far exceed the Magnitude of our Earth; fhould be able to turn about with the fame celerity; Oh! 'tis altogether beyond the fancy of a Poet, or a Madman.

- For anfwer unto this Argument, our Ad: verfaries tell us, that there is not in the Heavens any repugnancy to fo fwift a Motion; and that whether we confider the nature of thofe Bodies; or, fecondly, the fwiftnefs of this Motion.

1. For the Nature of thofe $\}$ Qualities. Bodies, either their Quantity.
I. There is not in them the Qualities of lightnefs or heavinefs, or any the leaft contrariety that may make them reluctant to one another.
2. Their Magnitude will help them in Rofflif.17 their fwiftnefs : For the greater any Body fell.s. for, is, the quicker will it be in its motion, and that not only when it is moved by an inward' Principle, as a Millitone will defcend fafter

## That the Earth maj be a Planet.

than a little Pebble ; but alfo when its Motion does proceed from fome external Agent, as the Wind will drive a great Cloud, or a heavy Ship, when it is not able to ftira little Stone.
2. As for the fwiftnefs of this Motion, the pofibility of it may be illuftrated by 0 ther Particulars in Nature : As,
Idem lib. 2 1. The found of a Cannon, in a little fect.1.c.5. time, is carried for twenty miles diftance.
2. Though a Star be fcituate fo remotely from us; yet the Eye difcerns it in a moment, which is not without fome motion, either of the Species of the Star, or the
Idem lib. I Rays of the Eye. Thus alfo the Light does
fett. I. 2 2. in an inftant pafs from one fide of the Heaven to a another.
3.' If the force of Powder be able to carry a Bullet with fo great a fwiftnefs, we need not doubt then, but that the Heavens are capable of fuch a celerity, as is ufually attributed unto them.

Unto thefe it may be anfwered:

1. Where they fay that the Heavenly Bodies are without all gravity; we grant it, in the fame fenfe as our Earth alfo, being confidered as whole, and in its proper place, may be denied to be heavy : fince this Quality, in the exacteft fenfe, can only beatrin bed unto fuch parts as are fevered from the whole to which they belong. But however, fince the Heavens, or Stars, are of a material Subftance, 'tis impofible but there fhould be in them fome ineptitude to Moti-
on ; becaufe Matter is of it felf a dull and fluggin thing; and by for much the more, as it is kept clofe and condenfed together. And though the followers of Ptolomy, do with much confidence deny the Heaveis to be capable of any reluctancy to motion; yet it were eafy to prove the contrary, out of their own Principles. 'Tis not conccivable, how the upper Sphere fhould move the nether, unlefs their Superficies were fall of rugged parts, (which they deny:) or elfe one of the Orbs muft lean upon the other with its weight, and fo makeit partake of its own Motion. And befides, they tell $4 s$, that the farther any Sphere is diftant from the Primum Mobile, the lefs is it hindred by that in its proper courfe, and the foones does it fininh its own Revolution. From whence it will eafily follow, that thefe Bodies have refiftancy from one another.

I have often wondred, why amongtt the inchanted Buildings of the Poets, they have not fained any Cattle to be made of the fame Materials with the folid Orbs, fince in fuch a Fabrick, there would have been thefe eminent Conveniences.
i. It muft needs be very pleafant, by reafon of its perficicuity, becaufe, it is more diaphanous than the Air it felf, and fo the Walls of it could not hinder the profpet: any way.
2. Being fo folid and impenitrable, it munt needs be excellent againft all violence munt needs be excellent againt and andialts of

## That the Earth may be a Planet.

the Enemy, who fhould not be able to break it with the moft furious Batteries of the Ram, or pierce it with any Cannonfhot.
3. Being void of all heavinefs, a Man may carry it up and down with him, as a Snail does his Houfe: and fo, whether he follow the Enemy, or fly from him, he has ftill this advantage, that he may take his Caftle and Defence along with him.

But then again, there are on the other fide as many inconveniences. For,

1. Its perfpicuity would make it fo open, that a Man fhould not be able to retire himfelf into any private part of it. And then,
2. Being fo extreamly folid, as wellas invifible, a Man fhould be ftill in danger of knocking his head againft every Wall and pillar; unlefs it were alfo intangible, as fome of the Peripateticks affirm.
3. Its being without all gravity, would bring this inconvenience, that every little puff of Wind would blow it up and down; fince fome of the fame Sect are not afhamed to fay, that the Heavens are fo utterly devoid of Heavinefs, that if but a little Fly fhould juftle againt the yaft Frame of the Celeftial Spheres, he would move them out of their places.

A ftrong Fancy, that could be at leifure, might make excellent fport with this Aftronomical Fiction.

## That the Earth may be a Planct.

So that this firft evafion of our Adverfaries, will not fhelter them from the force of that Argument, which is taken from the incredible fwifnefs of the Heavens.
2. Whereas they tell us, in the fecond place, that a bigger Body, as a Millitone, will naturally defcend fwifter than a lefs, as a Pebble. I anfwer: This is not becaufe fuch a great Body is in it felf more eafily movable ; but becaufe the bigger any thing is which is out of its own place, the ftronger will be its natural defire of returning thither, and fo confequently the quicker its motion. But now thofe Bodies that more circularly, are always ip their proper fcituations, and fo the fame reafon is not applyable unto them. And then, whereas 'tis faid, that Magnitude does always add to the fwiftnefs of a violent motion, (as Wind will move a great Ship fooner than a little Stone ) : We anfwer, This is not becaufe a Ship is more eafily movable in it felf than a little Stone: For I fuppofe, the Objector will not think he can throw the one as far as the other, but becaufe thefe. little Bodies are not fo liable to that kind of violence, from whence their Motion does proceed.

As for thofe Inftances which are cited to illuftrate the polfibility of this fwiftnefs ip the Heavens, we anfwer: The palfage of a Sound, is but very flow in comparifon to the motion of the Heavens. And then befides, the fwiftnefs of the Species of Sound

## That the Earilj may be a Planet.

or Sight, which are Accidents, are not fit to infer the like celerity in a material fubftance. And fo likewife for the Light which
${ }^{*}$ De sni- * Arifotle himfelf ${ }_{2}$ and with him the gene-
ma.l. $2,6.7$ rality of Philofophers; do for this yery rea fon prove not to be a Body, becaufe it moves with fuch fwiftnefs, of which (it feems) they thought a Brdy to be incapable. Nay, the $\dagger$ Objector himfelf, in ano-
tRoff: 1.2. ther place, fpeaking of Light in reference
fecti.i. c.4. to a Subitance, does fay; Lumen eft accidens, fic fpecies rei vife, ofo alia eft ratio fubftenticrum, idlia accidentium.

To that of the Bullet, we anfwer : He might as well have illultrated the fwiftnels of a Buller, which will pafs four or five miles in two minutes, by the motion of a hand in a Watch, which paffes two or three inches in twelve hours; there being a greater difproportion betwixt the motion of the Heavens, and the fwiftnefs of a Bullet, than there is betwixt the fwiftniefs of a Bullet, and the motion of a Hand in a Watch.

Arg. 2. Another Argument to this purpore, may be taken from the chief end of the Diurnal and Annual Motions, which is to diftinguifh betwixt Night and Day, Winter and Summer; and fo confequently, to ferye for the Coinmodities and Seafons of the habitable World. Wherefore it may feem more agreeable ta the Widdom of Providence, for to make the Earth as well the efficient, as the final caule of this motion:

That the Earth may be a Planet.
tion: Efpecially fince nature in her other Operations does never ufe any tedious difficult means, to perform that which may as well be accomplifihed by fhorter and eafier ways. But now, the appearances would be the fame, in refpect of us, if only this little Point of Earth were made the fubject of theff: Motions, as if the vaft Frame of the World, with all thofe Stars of fuch number and bignefs, were moved about it. 'Tis
 2d\{sairi. Nature does nothing in vain, but in all her courfes does take the moft compendious way. 'Tis not therefore (I fay) likely, that the whole Fabrick of the Heavens, which do fo much exceed our Earth in magnitude and perfection, fhould be put to undergo fo great and conftant a Work in the fervice of our Earth, which might nore eafily fave all that labour, by the Circumvolution of its own Body; efpecially, fince the Heavens do not by this motion attain any farther perfection for themfelves, but are made thus ferviceable to this little Ball of Earth. So that in this cafe it may feem to argue as much improvidence in Nature to imploy them in this motion, as it would in a * Mother, who in warning her Child, *Lansbers would rather turn the Fire about that, than that about the Fire. Or in a $\dagger$ Cook, who $\dagger$ Kep.ar. would not roaft his Meat, by turning it about to the Fire; biut rather, by turning the Fire about it. *Or in a Man, vrho L. 4 afcend:-

## That the Earth may be a Planiet.

afcending fome hioh Tower, to fave the labour of ftirring his Head, fhould rather defire that all the Regions might fucceffively beturned before his Eye, that fo he might cafily take a view of them.

We allow every Watch-maker fo much wifdom, as not to put any Motion in fis Inftrument, which is fuperfluous, or may be fupplied an eafier way: And Ihall we not think that Nature has as much providence as every ordinary Mechanick? Or can we imagine that She fhould appoint thofe numerous and vaft Bodies, the Stars, to compafs us with fuch a fwift and reftlefs Motion, fo full of confufion and uncertain: ties, when as all this might as well be done by the Revolution of this little Ball of Earth?

Arg. 3. Amongtt the feveral parts of the World, there are fix Planets which are generally granted to move. As for the Sun and the Earth, and the fixed Stars, it is yet in queftion, which of them are naturally indowed with the fame condition. Now common reafon will diftate unto us, that Motion is moft agreeable to that which in kind and properties is moft near to thofe Bodies that undoubtedly are moved. But now there is one eminent qualification, wherein the Earth does agree with the Planets; whereas the Sun, together with the fixed Stars, do in the fame refpect differ from them : and that is Light, which all the Planets, and fo too the Earth, are fain
to borrow elfewhere, whilft the Sun and the Stars have it of their own. From whence it may be probably concluded, that the Earth is rather the Subject of this Motion than the other. To this it may be added, that the Sun and Stars feem to be of a more excellent Nature than the other parts of the World, and therefore fhould in reafon be endowed with the beft qualifications. But now Motion is not fo noble a condition as Reft: that is but a kind of wearifom and fervile thing, whereas this is ufually afcribed to God himfelf: Of whom'tis faid;

* Immotres ftabilifg; manens dans cuncta moveri.

Arg. 4. † Arifotle tells us, 'Tis very $\dagger$ De cerlo, agreeable to reafon, that the time appoin- l,2, c,10. ted for the Revolution of each Orb, fhould be proportionable to its bignefs. But now this can only be, by making the Earth a Planet, and the Subject of the Annual and Diurnal Motions. Wherefore 'tis probable, that this does rather move than the Heavens.

According to the common Hypothefis, the Primum Mobile will move round in a day. Saturn in thirty Years. fupiter in twelve. Marsintwo: The Susn, Venus, and Mercis$r y$, which have feveral Orbs, yet will agree in their Revolutions, being each of them about a Year in finifhing their Courfes: Whereas, by making the Earth a Planet, there will be a juit proportion betwist the bignef̣s
bigners of the Orbs, and the time of their Motions: For then, next to the Sun, or Centre, there will be the Sphere of Merich$r y$; which as it is but narrow in its Diameter, fo likewife is it quick in its Motion, running its Courfe in eighty eight days: Venses, that is next unto it, in 224 days: The Earth in 365 days; or a Year: Mars in 687 days: Jupiter in 4332 days: Saturn in 107.59 days. Thus likewife is it with thofe Medicean Stars that encompafs Fupster. That which is loweft amongit them, finifhes his Courfe in two and twenty hours ; the next in three days and an half; the third in feven days; and the farthelt in feventeen days. Now as it is (according to Ariftotle's confeflion) more likely that Nature fhould obferve fuch a due proportion betwixt the Heavenly Orbs; fo is it more probable, that the Earth fhould move, rather than the Heavens.

Arg. 5. This may likewife be confirmed from the appearance of Comets: Concerning which, there are three things commonly granted; or if they were not, might be eafily proved : Namely,

1. That there are divers Comets in the Air, betwixt the Moon and our Earth.
2. That many of thefe Comets do feem torife and fet as the Stars.
3. That this appearing Motion is not properly thicir own, but communicated unto them from fomewhat elfe.

That the Earth ssay be a Planet.'
But now, this Motion of theirs cannot be caufed by the Heavens; and therefore it mult jeceffarily proceed from the Revolution of Our Earth.

That the Moon's Orb cannot carry along with it the greater part of the Air wherein thefe Comets are placed, might eafily be proved from the common Grounds. For the Concave Superficies of that Sphere, is ufually fuppofed to be exactly terfe and fmooth; fo that the meer touch of it can-. not turn about the whole Element of Fire; with a Motion that is not natural unto it. Nor could this Elementary Fire, which they imagine to be of a more rarified and fubtil Nature, communicate the fame Motion to the thicker Air, and that to the Waters (as fome affirm): For by what means could that fmooth Orb take hold of the adjoining Air? To this Sarfins anfwers, that there are great Gibbofities, and mountainous Inequalities, in the Concavity of the loweft Sphere, and by thefe is it enabled to carry along with it the Fire and Air. But * Fromondres tells him, Fitititia iftn, to ad frgam repertid cap. 16 rif funt. And yet his own Conjecture is farce fo good, when he affirms, that this Motion of the Etherial Air, as alfo of that Elementary Air hard by us, is caufed by that ruggednefs which there is in the Bodies of the Planets; of which Opinion; we may, with as good reafon, fay as he fays to Sarfins: Fitcitia ifta, ot ad fugam reperta; Thefe things are meer Fictions, inven- ground.

But now, this appearance of the Comets may eafily be refolved, if we fuppofe the Earth to move. For then, though they did ftill remain in their wonted places; yet this, by its Diurnal Revolution, fucceflively withdrawing it felf from them, they will appear to rife and fet. And therefore, according to this common natural Experiment, it is more probable that the Earth Should nove, thas the Heavens.

Another Argument. urged by fome, to prove that this Globe of Earth is eafily movable, is taken from the Opinion of thofe who affirm, that the accefs of any Weight Vid.Vafq. unto a new place, as fuppofe an Army, does l.f.dif.2. make the Earth poife it felf afrelh, and sap. $36 . \quad$ change the Centre of Gravity that it had before; but this is not generally granted, and therefore not to be infifted on as a common ground.

To this purpofe likewife is that Inference of Lansbergius, who from Archimedes his faying, that he could move the Earth, if he knew where to ftand and faften his Inftrument ; concludes, that the Earth is eafily movable : whereas it was the intent of Ar chimedes, in that Speech, to fhew the infinite power of Engines; there being no Weight fo great, but that an Inftroment might be invented to move it.

Before we finifh this Chapter, 'tis requifite that we enquire what kind of Faculty

## That the Earth may be a Planet.

that is, from which thefe Motions that Co: pernicus afcribes unto the Earth, does proceed. ' Whether or no it be fome Animal Power that does allift (as Ariffotle), or inform (as Keplar thinks); or elfe fome other natural motive Quality which is intrinical unto it.

We may obferve, That when the proper genuine caufe of any Motion is not obvious, Men are very prone to attribute unto that which they difcern to be the moft frequent Original of it in other things, Life. Thus the Stoicks affirm, the Soul of the Water to be the caufe of the ebbing and flowing of the Sea. Thus others think the Wind to Sen. Nat. proceed from the Life of the Air, whereby 2 o.lib.5. it is able to move it felf feveral ways; as other living Creatures. And upon the fame grounds do the Platonicks, Stoicks; and fome of the Peripateticks, affirm the Heavens to be animated. From hence likewife it is, that fo many do maintain Arffotle his Opinion concerning Intelligences : which fome of his Followers, the School-men, do confirm out of Scripture; from that place in Matth. 24.29: where 'tis faid, The Powers of the Heavens fhall be haaken. In which words, by Powers, (fay they) are meant the Angels, by vvhofe power it is that the Heavens are moved. And fo likewife in that, Fob 9. 13. vuhere the Vulgar has it, Sub gub curvantur, qui portaint orbem; that is, the Intelligences. Which Text; might ferve altogether as vell to prove the Fable of Atlas

Attas and Hercules. Thus $C$ ajeten concludes from that place in PJalm 136.5. where 'tis faid, God by mijdom mnade the Heavens: or, according to the Vulgar, Oui fecit Calos intellecti, That the Heavens are moved by an intelligent Soul.
If we confider the Original of this Opinion, we: fhall find it to proceed from that mittake of Ariforte, who thought the Heavens to be Eternal; and therefore to require fuch a moving caufe, as being of an inmaterial Sphflance, might be exempted from all that weariness and inconflancy, which other things are liable unto.

But now this ground of his is evidently falfe, fince 'tis certain, That the Hearens had a beginning, and fhall have anend. However, the imploying of Angels in thefeMotions of the World, is both fupeffluous and very improbable.

1. Becaufe a natural powet, intrinical to thofe Bodies, will ferve the turinas well. And as for other Operations, which are to beconftant and regular, Nature" does commonly make ufe of fome inward principle.
2. The Intelligences being immaterial, cannot immediatly wvork upon a Body. Nor does any one tell us vvhat Inftruments they fhould make ufe of in this bufinefs. They have not any hands to take hold of the Heavens, or turn them about. And that Opinion of Aquinas, Durind, Soncipss, with nther
other School-men, feems to be viithout all reafon; who make the Faculty, whereby the Angels move the Orbs, to be the very fame with their Undertandings and Will: So that if an Angel do but meerly furpend the Aft of willing their Motion, they muft neceflarily ftand fill ; and on the contrary, his only willing them to move, fhall be e nough to carry them about in their feveral Courfes. Since it were then a needlefs thing for Providence to have appointed Angels unto this bufineff, which might have been done as well by the only Will of God. And befides, how are the Orbs capable of perceiving this Will in the Intelligences? Or if they were, yet what motive Faculty bave they of themfelves, which can inable them to obey it ?
Now, as it would be with the Heavens; fo likewife is it with the Earth, which may be turned about in its Diurnal Revolution, without the help of Intelligences, by fome motive Power of its own, that may be intrinfical unto it.
If it be yet inquired, What caule there is of its Annual Motion? I anfwer: 'Tis eafily conceivable, how the fame Principle may ferve for both thefe, fince they tend the fame way, from Weft to Eaft.
However, that Opinion of Kcplsir is not very improbable, That all the Primary Planets are moved round by the Sun, which once in twenty five, or twenty fix

That the Earth may be a Planet. days, does obferve a Revolution about its own Axis, and fo carry along the Planets that encompafs it; which Planets are therefore flower or fwifter, according to their diftances from him.
If you ask, By what means the San can produce fuch a Motion?
He anfwers: By fending forth a kind of Magnetick Virtue in ftreight Lines, from each part of its Body. ; of which there is always a conftant fuccefion: fo that as foon as one Beam of this Vigor has palfed a Planet, there is another prefently takes hold of it, like the Teeth of a Wheel.

But how can any Virtue hold out to fuch a diftance ?
He anfwers : Firft, as Light and Heat, together with thofe other fecret Influences, which work upan Minerals in the Bowels of the Earth : fo likewife may the Sun fend forth a Magnetick Motive Virtue, whofe Power may be continued to the fartheft Planets.
Secondly. If the Moon, according to common Philofophy, may move the Sea, why then may not the Sun move this Globe of Earth?
In fuch Queries as thefe, we can conclade only from Conjectures, that Speech of the Wife Man, Ecclef. 3. II being more efpecially verified of Aftronomical Queftions, concerning the Frame of the whole lniverfe, That $n 0$ Man ran find out the Works of

God,

That the Earth may be a Plonet.
God, from the beginning to the end. Though we may difcern divers things in the World, which may argue the infinite Wifdom and Power of the Author; yet there will be always fome Particulars left for our difpute and enquiry, and we flall never be able, with all our induftry, to attain a perfect comprehenfion of the Creatures, or to find them wholly out, from the beginning to the end.
The Providence of God having thus con- $V$ sullef. trived it, that fo Man might look for ano-str. Pbither Life after this, when all his longing and thirft fhall be fully. fatisfied. For fince no natural Appetite is in vain, it muft neceffarily follow, that there is a pofibility of attaining fo much knowledg, as thall be commenfurate unto thofe defires; which becaufe it is not to be had in this World, it will behove us then to expect and provide for another.

## Tbat the Earth:may be ä Planet!

PROP. X.

That 4bis Hypotbefs is exactly agrecable to covimson appearañces.

IT hath been already proved, that the Earth is capable of fuch a fcituation: and: motion, as this Opinion fuppofes it to have. It renains, that in the latt place, we fhew how agreeable this would be unto thofeordinary feafons of Days, Months, Years, and all other appearances in the Heavens: $\omega$ :
iI: As for the difference betwixt: Days and Nights: 'ris evident, That this may be caufed as well by the Revolution of the Earth, as the Motion of the Sun; fince the Heavenly Bodiesmult needs feem after the fame manner to Rife and Set, whether or no they themfelves by their own Motion do pafs by our Horizon and Vertical Point ; or whether our Horizon and Vertical Point, by the Revolution of our Earth, do pafs by them. Ac-
 appear any difference; whether or no the Eye be moved from the Object, or the Object from the Eye. And therefore I cannot chufe but wonder that a Man of any Reafon

That the Earth may be ai Planet.
or' Sence fhould niake choice of no better an Argument to conclude his Book withal, than that which we reade at the latter end of :Al: Roff. where he infers, that the Earth does not move, becaufe then the fhadow in a SunDial would not be aitered:
2. As for the difierence of Months, we fay, That the divers Illuminations of the Moon, the different bignefs. of her Body, her remaining for a langevil or fhorter; time iin the Earth's lhadow, when fhe is eclipfed, coc. may well/enough be folved by dappofing her to move above'our Earth; in' an Eccentrical Epicycle. Thus;

## That the Earth may be a Planct.

In which kind of Hypothefis there will be a double difference of Motion. The one caured by the different fcituation of the Moon's Body in its own Eccentrick. The other by the different fituation of the Moons Orb in the Earth's Eccentrick: which is fo exactly anfwerable to the Motions and Appearances of this Planet, that from hence Lansbergisw draws an Argument for this Syfem of the Heavens, which in the ftrength of his confidence he calls, Demonffrationemi'Gntr: RLovulu', cui nullầ ratione poteft contradici.
4. As for the difference betwixt Winter and Summer; betwixt the number and length of Days, which appertain to each of thofe Seafons: the 'feeming motion of the Sun from one Sign to another in the Zodiack: All this may eafily be folved, by fuppofing the Earth to move in an Eccentrical. Orb about the Sun. Thus,

## That the Earth may be a Planet.

Suppofe the Earth to be at C , then the Sun at $A$, will feem to be in the Sign $\mathcal{S}$, and at the greateft diftance from us, becaure the

- Earth is then in the fartheft parts of its $E c$ centrick. When after, by its Annual Motion, it hath paffed fucceflively by the Signs an $\neq r \vee$ II, at length it comes to the other Solfice at B, where the Sun will appear in $w$, and feem biggett, as being in its Perigis, becaufe our Earth is then in the neareft part of its Eccentrick.
As for all other Appearances of the Sun, which concern the Annual Motion, you may fee by the following Figure, that they are exactly agreeable to this Hyporthefis.

Where you have the Earth defrribed about M 3

## That the Earth may be a Plamet:

the Sun, at $\cdot A$, in the four chief Points of the Zodiack; namely, the two Equinotitials at $v a n d, r$, and the Solytices at $v$ and $\pi$. Through, all which Points, the Earth does pafs in its Annual Motion, from Weft to Eaf.

The Axis, upon which our Earth does move, is reprefented by the Line B. C ; which $A x i s$ does always decline from that of the Ecliptick, about 23 degires, 30 minutes. The Points B C, are imagined to be the Poles, B the North Pole, and C the South.
Now if we fuppofe this Earth to turn about its own Axis, by a Diurnal Motion, then every Point of it will defcribe a Parallel Circle, which will be either bigger or leffer, according to its diftance from the Poles. The chief of them are the Equinoctial DE. The two Tropichs, F G, and HI. The two Polar Circles, M N the Artick, ard KL the Antartick: of which, the Equinotitial only is a great Circle, and therefore will always be equally divided by the Line of illumination, ML; whereas the other Parallels are thereby diftributed into unequal parts. Amonglt which parts, the Diurnal Arches of thofe that are towards $B$, the North Pole, are bigger than the No太urnal, when cur Earth is in w, and the Sun appears in $\subseteq$. Infomuch, that the whole Artick Circlc is crilightned, and there is day for half a Year together under that Pole.
Fiow when the Earth proceeds to the other - Solffice at $\approx$, and the Sun appears in $\%$, then
thàt $H$ emi $/$ phere mult be involved in darknefs, which did before partake of Light. And thofe Parallels towards the North and South Poles, will fill be divided by the fame inequality. $\cdot$ But thofe bigger parts, which were before enlightned, will now be darkned, or vice verfa. As when the Earth was in N, the -Artick Circle MN was wholly enlightned, and the Antartick K L altogether in the dark. So now, when it is in A, the fytartick K L, will be wholly in the Light, and the other $M \mathrm{~N}$, altogether obfcured. Whereas the Sun before was vertical to the Inhabitants at the Tropick F G. So now is he in the fame fituation to thofe that live under the other Tropick H I. And whereas before the Pole did incline 23 degrees 30 minutes towards the Sun, fo now does it recline as much from him. The whole difference will amount to 47 degrees, which is the diftance of one Tropick from the other.

But now, in the two other Figures, when the Earth is in either of the Equinotials $\uparrow \approx$, the Circle of Illumination will pafs through both the Poles; and therefore mult divide all the Parallels into equal parts. From whence it will follow, that the Day and Night muft then be equal in all places of the World.

As the Earth is here reprefented in $\leadsto$, it turns only the enlightned part towards us; as it is in $\vee$, we fee its Nocturnal Hcmi/phere.

So that according to this Hypothcfis, we may eafily and exactly reconcile every Ap-

That the Earth maxay be a Planet. pearance concerning the difference betwixt Days and Nights, Winter and Summer, together with all thofe other varieties which depend upon them.

If you would know how the Planets (according to the Syfeme of the Heavens) will appear Direct, Stationary, Retrograde; and yet fill move regularly about their own Centres, you may plainly difcern it by this following Diagram.

Where fuppofe the Sin to be at $A$, the Circle (B GM) to be the Orb of the Earth's. Motion; and that above it, noted with the fame Letters, to be the Sphere of Jupter ; and the uppermoft of all, to be a part of the Zodiack in the Starry Heaven.

Now if you conceive the Letters, BCD EFGHIKLM, and abcdefghiklm, to divide the Earth's Orb, and that of $\mathfrak{f k}$ piter, into feveral parts, proportionable to the llownefs or fwiftnefs of their different motions, ( Fupiter finifhing his Courfe in twelve Years, and the Earth in One) then fuppofing the Earth to be at the Point ( $B)_{2}$ and 7 upiter likewife in his Orb to be fcituated at (b), he will appear unto us to be in the Zodiack at the point ( r ). But afterwards, both of them moving forward to the Letter (Cc), ${ }^{\prime}$ upiter will feem to be in the Zodiack at (v), as having paffed directly forward according to the order of the Signs. And fo likewife each of them being tranfferred to the places (D d) (E e), Ffupitcr will ftill appear Direet, and to have moved in the Zodiack unto the Points ( y z). But now vvhen the Earth comes to be more immediatly interpofed betwixt this Planet and the Sun; as vvhen both of them are at the Letter (F f), then vvill fipiter bedifcerned in the Zodiack at ( $x$ ). So that all the vvhile the Earth vvas pafling the Arch (E F), $\mathcal{F u p i t e r}$ did fill remain betwixt the Points $(z)$ and ( $x$ ), and therefore muft feem unto us as if he vvere Stationnry; but
after-
aftervvards; both of them being carried to ( $\mathrm{G}, \mathrm{g}$ ); then Fupiter vvill appear at ( s ), as if by a halty motion he had returned from his former Courfe the fpace ( $\mathrm{x} s$ ): Both of them pafling to ( $(\mathrm{Hh})$, this Planet vvill ftill feem to be fvviftly:Retrograde, and appeati in the Point at ( p ); but vvhen they come to the Points (Ii), Fupiter vvill then feem to be llovver in this Motion, and to have only paffed the face ( $p n$ ). Both of them being transferred to ( Kk ), ifupiter wvill then appear in the Zodiack at ( 0 ), as being again Direit, going forvvard according to the order of the Signs; and vvhile the Earth did pafs the Arch (I K), Fupiter then remain'd betvveen the Points ( n 0 ), and fo confequently, did again feem to be Stationary. Both of them coming to (L L1), and thence to (Mm), Fupiter vvill ftill appear Direct, and to have gone forvvard in the Zodiack from ( $q$ ) to ( t ). Sothat all the fpace vvherein fupiter is Retrograde, is reprefented by the Arch ( $n z$ ). In vvhich fpace, he himfelf moves in his ovvn Orb, the Arch (ei), and fo the Earth in its Orb, a proportional fpace (E I).

As it hath been faid of this Planet, fo likevvife is it appliable to the other. Saturn, Mars, Venus, Mercury; all wwhich are thus made to appear direct, fationary, and retrograde, by the motion of our Earth, vvithout the help of thofe Epycicles and Eccentricks, and fuch unnecellary Wheel-vvork, vvherevvith Polomy hath filled the Heavens,

That the Earth:mag, be a Planet.
Infomuch that here *: Fromondus is fain to confefs, Nullo Argumento in . Peciem probabiliori, motum terira annumm Copernicanis afirui, quam allo ftationis, dijectionis, regreffion nis Planitarum. : There is not any more probable Argument to prove the Annual Motion of the Earth, than its agrceablenefs to the ftation, direction, and reareeflion of the planets.

Lattly, That Copervicuis's Syfeme of the Heavens, is very andiverable to the exacteft Obfervations, may be manifeft from this folloyving defcription of it .

## That the Earth say be a Planet.

Suppore the Sun to be fcituated at A:Now becaufe Mercury is found by experience to be always very near the Sun, fo that he does for the moft part lie hid under his Rays. Âs alfo becaufe this Planet hath à more lively vigorous Light than any of the other; therefore we may infer, that his Orb is placed next unto the Sun, as that at $B$.
As for Venus, 'tis obferved, That She does always keep at a fet diftance from the Sun, never going from him above forty degrees, or thereabouts; that her Body appears, through the Perfpective, to be forty times bigger at one time than at another; that when he feems biggeft and neareft unto us, we then difcern her as being perfectly round. Therefore doth this planet alfo move in a Circle that incompalfeth the Sun: Which Circle does not contain the Earth within it, becaufe then, Venus would fometimes be in oppofition to the Sun; whereas, 'tis generally granted, that the never yet came fo far as to be in a Sextile.
Nor is this Circle below the Sun, (as Ptolomy fuppofeth) becaufe then this Planet, in
$\dagger$ Matuti- $\dagger$ both its Conjunctions, would appear hor-

tima.

## That the Earth may be a Planet.

appear fixty times bigger when he is near us, than at his greateft diftance; that he is fometimes in oppofition to the Sun. From whence we may conclude, that his Orb does contain our Earth within it. 'Tis obferved alfo, that he does conftantly appear in the Full, and never horned; from whence likewife it is manifeft, that the Sun is comprehended within its Orb, as it is in that which is reprefented by the Circle E.

And becaufe the like appearances are obferved in Fupiter and Saturn, ( though in lefs degrees) therefore we may with good reafor conceive them to be in the Heavens, after fome fuch manner as they are here fet down in the Figure, by the Circles F G.

As for the moon; becaufe fhe is fometimes in oppofition to the Sun; therefore muft her Orb comprehend in it the Earth; becaufe fhe appears dark in her Conjunction, and fometimes eclipfes the Sun, therefore that muft neceflarily be without her Orb, as it is in that Epicycle at H. In the Centre of which, the Earth muft neceffarily be fcituated according to all thofe appearances mentioned before. So that the Orb of its annual Motion, will be reprefented by the Circle D.

All which appearances, cannot fo well be reconciled by Prolomy, Tycho, Origanus, or by any other Hypothefis, as by this of Copernisus. But the application of thefe to the feveral Planets, together with fundry other particulars, concerning the Theo-
rical part'of Aftronomiy; you may fee more fully fet:down by thofe who have purpofely handled this Subject; Copernicus, Rbeticus, Galilats; but more efpecialli Keplar, unto whon I do acknowledg my felf indebted for fundry Particulars in this Difcourfe.
I have done with that which was the chief purpofe of the prefent Treatife; namely, the removal of thofe common : Ptejudices that Men ufually entertain againft this Opinion. It remains, that by way of Conclufion, I endeavour to ftir up others unto thefe kind of Studies, which by moft Men are fo much neglected:
'Tis the moft rational way, in the profecution of feveral. Objects, to proportion our love and endecvour after every thing, according to the excellency and defireablenefs of it. But now; amongft all Earthly Contentments, there is nothing either better in it felf, or more convenient for us, than this kind of Learning; and that; whether you confider it according to its general Na ture, as a Science ; or according to its more Jpecial Nature, as. fuch a Science.

1. Confider it as a Science. Certain it is, that amongit the variety of Objects, thore are more eligible, which conduce unto the welfare of that which is our beft part, our Souls. 'Tis not fa much the pleafing of our Senfes, or the increafing of our Fortunes, that does deferve our:induftry, as the information of our Judgments, the improvement of our Knowiedg. Whatever the
the World may think, yet it is not a valt Eltate, a Noble Birth, an eminent place, that: can add any thing to our true real Worth; but it mult be the degrees of that which makes us Men, that muft make us better Men, the endowments of our Soul, the enlargement-of our Reafon. Were it not for the contemplation of Philofophy, the Heathen * Sineca would not fo much as $* p_{\text {r.ef. }}$ ad thank the Gods for his Being $;$ Nifi ad bee lib. I Nat.
 trabe bec ineftimabile bonum, non eft vita tanti, ut fudit, ut aftuem. Take but away this benefit," and he would not think Life worth the fweating for: - So much happinefs could he difcern in the Studies of Nature: And therefore as a Science in general, it may very well deferve our Love and Induiftry.
2. Confider it as fuch a particular Science, Aftranomy: The word fignifies, the Law of the Stars, and the Hebrews (who do not ordinarily admit of compofition)
 lorimin fatuta, or the Ordinances of Heaven; Jer.33.25: becaufe they are governed in their Courfes by a certain Rule, as the $P$ falmif $f$ fpeaks, in Pfal:148. 6. God bias given them a Eam which fhall not be broken.
Now this, of all other natural Sciences, may beft of all challenge our Induftry; and that,' whether you confider it,'
3. Abfolutely, as it is in it felf: Or; 2. As it ftands in reference to us.

## That the Earth miay be a Planet.

I. As it is in it felf. The excellency of any Science may be judged of (faith the Philofopher) firtt, by the excellency of the Object. Secondly, By the certainty of its Demonftrations.
(1.) For the Object. It is no lefs than the whole World (fince our Earth alfo is one of the Planets) more efpecially thofe valt and glorious Bodies of the Heavens. So that in this refpect, it far exteeds all thofe barren, empty Speculations, about Matria Prima, or Univerfate, and fuch-like Cobwebs of Learning; in the fludy of which, fo many do mifplace their younger Years. And for the fame reafon likewife is it to be preferr'd before all thofe other Sciences, whofe Subjects are not either of fo wide an extent, or fo excellent a Nature.
(2.) From the Demonffrations of Aftronomy, they are as infallible as Truth it felf; and for this reafon alfo does it excel all other Knowledg, which does more depend upon Conjectures and Uncertainty. They are only thofe who want skill in the Principles of this Science, that miftruft the Conclufions of it. Since therefore in thefe refpects, it is one of the moft excellent Sciences in Nature, it may beft deferve the induItry of Man, who is one of the beft Works of Natare. Other Creatures were made with their Heads and Eyes turned downwards: Would you know why Man was not created fo too? Why it was that he might be an Aftronomer.

## Os bomini fublime dedit, Celumg; tueri

 Fuflit, ơ crectos ad Sydera tollere viltixs.> God gave to Man an upright Face, that he Might viem the Stars, and learn Aftronomy.
2. Confidsr it in reference to $\mu \mathrm{s}$, and f 。 it is;

1. Moft Uefeful.
2. Moft Pleafant.
I. Moft Ufeful, and that in fundry refpects. It proves a God and a Providence, and incites our Hearts to a greater admiration and fear of his Omnipotency. We may underftand by the Heavens, bow much mightier be is that made them; for by the greatnefs and beauty of the Creatures, proportionably the Maker. of them is feen, faith the Book of Wi Jdom , Cb . i 3.455 .'Twas hence Arifotle fetch'd his chief Argument to provée a primus Motor. 'Twas the confideration of thefe things that firlt led Men to the Knowledg and Worfhip of God, (faith * Tully); Hac nos primum ad Deo- *Tufcul, is rum cultum, tum ad modeftiam, magnitudinermg; Item Plur. animi erudivit. And therefore when God by de placir. the Prophet, would convince the People of $c 6$. his Deity, he bids them lift up their Eyes on bigh; and behold who bath created thofe things, that bringeth out their Hoft by Number, that calleth them all by their Names, \&c. Ifa.40.26. Which occafioned that faying of Latiantius; Tanta rerum magnitudo, tantas difpofitio, tanta Infit. l.,2. in. Servandis ordinibus, temporibusg; conftintio, c.5.
non potuit aut olim fine provido artifice orrin, aut conftare tot fachlis fine incola potente, aut perpectuani guberinati jure perito © © fciente reEtore, quod ratio ipfa declarat. Such a great order and conftancy amongt thofe valf Bodies, could not at firtt be made, but by a wife Providence, nor fince preferved without a poriefful Inhabitant, ; nor fo perpetiually governed without a skilful Guide.

True indeed, an ordinary view, and common apprehenfion of thefe Celeftial Bodies, muft needs manifeft the Excellency and Omnipotency of their Maker ; but yet a more accurate and diligent enquiry into their $\mathrm{Na}-$ tures, will raife our Underitandings unto a nearer Knowledg, and greater Admirationi of the Deity. As it is in thofe inferior things, where the meer out-fide of a Man, the comellinefs and majefty of his Countenance, may be fome Argunent from whence to infer the excellency of his Creator. But yet the fubtil A natomilt, 'who fearches fnore deeply into this wonderful Strücture, may fee a clearer evidence for this, in the confideration of the inward Fabrick, the Mufcles, Nerves, Membranies; together with all thofe fecret Contrivances in the Frame of this little World. Thus alfo is it in the great Univerfe, where the common apprehenfion of things is not at all confiderable, in comparifon to thofe other Difcoveries, which may be found out by a more exact enquiry.

As this Knowledg may conduce to the proving
proving of a God, and making: Mer *eligious; fo likewife may it ferve to confirm: unto us the Truth of the Holy Scriptures; fince the Sacred Story, in the order of its Narrations, does fo exactly agree with the Converfions of Heaven, and Legifical Afroz somy.
It may alfo fir us up to belaye our felves anfwerably, unte the : noble and divine Na ture of our Souls. When 1 confiderths Hes ven, the Works' of shy Fingers ; thet Moon and the Stars which theph baft prdaizechi: What is Palal: 336 Man, that thou art: Io mindful of hiver? as to. create fuch vaft glorious Bodies for his Setvice.:

Again, when I confider with my felf, the ftrange immenfity and bignefs of this great - Univerfe; in comparifon to which, his Earth of ours, is but as an undifcernable Point: When I comfider that I carty a Soul about me. of a far-greater worth: than all this, and Defires that are of a wider estent, and more uabounded capacity; than this whole Frame of Nature ; then me-thinks it mult needs argue a degeneratenefs and poyercy of Spirit, to buly my Facuilties about fo ignoble, nerrow a subject, asiony of the er earthly things.

What a folly is it in Men to have fuch high conceits of chemfelves, for fome frall Pofleffions which they have in the World above others, to keep fo great: a busle about fo poor a Matter., Hue oft punctum N 2 grod

Sen. Naft: :gkod inter: tot gentes forro or igni dividitur. Quaff. Lis 'Tis but a little Point, which with fo much Nomne
terres. $\alpha:$ ado is diftributed unto fo mañy Nations nimalia by Fire and Sword. "What great matter is confidera-: it to be a Monarch of a fmall part of a Point? ox, quibsur
prafidere Might not the Ants as well divide a little prajeari. Mole-hill into divers Provinces, and keep as
rider $n i$ ? Nam great a ftir in difpofing of their Governfo inter ment? Punctum off illiud in guo Navigatis, in susures vi- quo Bellatis; in gro Regna difponitis. All this deres all- : place wherein we War, and Travel, and quitri, jer difpofe of Kingdoms; is but a Point far lefs fibjac po- than any of thofe finall Stars, that at this${ }^{\text {refstent }}$, diftance are farce difcernable. Which when preceteris
vindican- the Soul does ferioufly meditate upon, it $t=m, q u a n-$ will begin to defpife the narrownefs of its to moverr- prefent Habitation, and think of providing ris cha- :for it felf a Manfion in thofe wider Spaces \&chs. above, fuch as may be more agreeable to the Boècius.de Noblenefs and Divinity of its Nature.
confoll.2. Why fhould any one dream of propagating his: Name, or fpreading his Report through the World ? when as though he had more Glory than Ambition can hope for; yet as long as all this habitable Earth is buit an inconfiderable Point, what great matter can there be in that Fame which is included within fuch Itrait contracted Limits?

He that to Honour only feeks to mount, And that his chiefeft end doth count; Let him behold the largenefs of the Skies, And on the frrait Earth caft his Eyes; He will defpife the glory of his Name, Which cannot fill fo fralla a Frame.

Why fhould any one be taken upin the admiration of thefe lower out-fides, thefe earthly Glories? Refpicite Coli Spatism, fir- Idem 1.3. mitudinem, celeritatem, of aliquando definite vilia mirari. He that rightly underftands the Nature of the Heavens, will fcarce efteem any other thing worth his notice, much lefs his woonder.

Now when we lay all this together, that he who hath moft in the World, hath almoft nothing of it; That the Earth it felf, in comparifon to the Univerfe, is but an inconfiderable Point : And yet that this whole Univerfe does not bear fo great proportion to the Soul of Man, as the Earth does unto that: I fay, when a Man, in fome retired thoughts, fhall lay all this together, it mult needs ftir up his Spirits to a contempt of thefe earthly Things, and make him place his love, and erideavour upon thofe Comforts that may be more anfwerable to the excellency of his Nature.

Without this Science, what Traffick could we have with Forreign Nations?. What would
would become of that mutual Commerce, whereby the World is now made but as one Commion-wealth.
Vofgi mediis in aquis Stelle, pelagog; timendo, Decratum morffratis ster, totig; dediftis, Legibus imventis haxinum, commercia nundo.
'T is yous bright Stars, that in the fearful Sea Does guide the Pilot through bis purpos'd way. 'Tis your divection that doth Commerce give, With all thofe Men that thro' the World do live.
2. As this Science is thus profitable in thefe and many other refpects: So likewife is it equally pleafant. The Eye (faith the Philofopher.) is the fenfe of Pleafure, and there are no delights fo pure and immaterialy as thofe which enter through that Organ. : Now to the Underftanding, which is the Eye of the Saul ${ }^{-}$there cannot be any fairer profpect, than to wiew the whole $F$ rame of Nature, the Fabrick of :this great Univerff; to difcern that order and comelinefs Wird. 9 . which there is in the magnitude, fotation, motion of the feveral parts that belong unto it; ta fee the true canfe of that conftant variety and alterasion which there is in the different Seafons of the Year. All which mult reeds enter into a Man's thoughts, with a great deal of fweetners and complacency: And therefore it was that Fulimen $\mathrm{Ca}_{\alpha} \mathrm{Jar}_{2}$ in the Broils.aod Tumult of the Camp, made choice of his delight :

Medina

Media inter pralia Jemper, Lucan. Stellarum, Coelig; plagis; fuperifq; vacatyitt:- Luca. He alroays leifure found, amidft bis Wars, To mark the Coafts of Heav'n, te learn the lays.

And for this reafon likewife did Seneca, amidft the continual noife and busfle of the Court, betake himfelf to this Recreation:

O quam juvabat, quo nibil majus, parens Natura gennit, operis immenf artifex, Calum intueri Solis, ei curros facros Mundiq; motus, Solis alternas vices, Orbemq; Pheobes; Affra queim cingunt uaga Lateq; fulgens atheris magni decuu.

O what a pleafure mas it to furvay Natures chief Work, the Heavers; wherc we may Viem the alternate Courfes of the Sum, The facred Cbariots, how ithe World does ran'; The Moons bright Orb, when She's attended by Thofe fcattered ftars, whofe light adorns the Sky.

And certainly thofe eminent Men, who have this way beftowed a great part of their imploiment, fuch as were Ptolomy, fulius Citfar, Alphonfus King of Spain, the Noble $T_{y}$ cho; \&c. have not only by this means pitched upon that which for the prefent was a more folid kind of pleafure and contentment, but alfo a furer way to propagate their memories unto future Ages. Thofe great coftly
Pyrs-

That the Earth may be a Planet. pyramids which were built to perpetuate the memory of their Founders, fhall fooner perifh and moulder away into their Primitive Duft, than the Names of fuch Worthies flall be forgotten. The Monuments of Learning are more durable than the Monuments of Wealchior Power.

All which Encouragements may be abundantly enough to ftir up any conifidering Man, to beftow fome part of his time in the ftudy and inquifition of thefe Truths.

Falices anima, guibus bac cognofcere primum, Inq; domos Juperas foaindere cura fuit.
